Description This subject is designed to prepare students for further study at university level in the areas of Health Science and in particular, Nursing. Undergraduate study in Health Science places a particular emphasis on mathematical skills in the workplace and this subject provides a basis for developing those skills. The subject places equal emphasis on both theoretical and practical application of mathematical techniques as would apply in practice in the health environment.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of basic mathematical concepts (basic mathematical operations, fraction, percentages, ratios and measurements).
2. Apply different mathematical techniques to solve problems related to oral medication, with and without technological assistance.
3. Apply different mathematical techniques to solve problems related to parental and paediatric medicine, with and without technological assistance.
4. Apply different mathematical techniques to solve problems related in the areas of volume and rates, with and without technological assistance.
5. Interpret, analyse, and solve health-related problems in relation to specific patient case studies.

Subject Content

Module 1: Basic Mathematics

1. Basic mathematical operations with whole numbers, decimals and fractions.
2. Ratios and rates.
3. Percentages.

4. Metric system.

5. Graphs and data.

Module 2: Mathematical Calculations in Health Care

6. Oral Medication ? Dosage: tablets and mixtures.

7. IV Fluid Management ? rate of flow, drop factor, burettes, pumps.

8. Injections ? types, mixing solutions, calculating dosage.
