

ENTERPRISE SYSTEMS AND ARCHITECTURES, TESTAMUR MAJOR (T151)

Western Sydney University Major Code: T151

Available to students in other Western Sydney University

Programs: Yes. Check that your program has the available credit points required to complete the subjects in this field of study. Any requisite requirements must also be met. Consult your Program Advisor for further advice.

This major is for highly motivated students who wish to enhance their experience and further their career opportunities through work-integrated learning. Most subjects in the major offer placements with industry partners, including a six-month internship. The internships are offered by our industry partners, such as DXC, which is the main supplier of the technology for the Aerotropolis infrastructure. There is a limited number of internships available each year; hence students will need to perform at an advanced level to secure one of these. Undertaking the internship will strongly increase the landing of a permanent position with target industry partners upon graduation. The major covers theories and technologies used for the development of large-scale infrastructure projects and the systems and integration that go along with projects of this size. Students will better understand the development and management processes related to each phase of the project and development life cycle. In addition, they will identify, analyse, and formulate solutions to real-world problems that occur in large-scale infrastructure projects. In devising these solutions students will consider principles associated with user interface design, professional and ethical issues, in particular, those relating to security and privacy of customer data and customer behaviour. Students who fail to secure an internship will be transferred to the Software Development major to be able to complete their ICT studies.
