Description The ability to understand and critique empirical research findings, and to evaluate the efficacy of therapeutic interventions, is essential to the professional psychologist as a scientist-practitioner. This subject equips students with advanced skills in utilising the research literature to guide and enhance their professional practice, design interventions to test clinically relevant hypotheses, and critically evaluate the effectiveness of existing research based on empirical evidence. It includes instruction in both quantitative and qualitative research design, program evaluation, single case designs and pilot studies.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise research design and methodology as a way of thinking, problem-solving, and approaching substantive clinically-relevant research questions (APAC GA: 3.2).
2. Evaluate and critique theoretical and applied literature to inform research evidence-based practice (APAC GA: 3.16, 4.2.1i & 4.2.3iv).
3. Evaluate a range of research methodologies to design a project that assesses clinical outcomes in psychology practice, including relevant transdisciplinary research for inter-professional practice (APAC GA: 3.9 & 3.17).
4. Conduct and report on a single case design project in relation to a clinically relevant area (APAC GA: 3.8 & 3.17).

Subject Content
