Credit Points 10

Legacy Code 300027

Coordinator Peter Lendrum ([https://directory.westernsydney.edu.au/search/name/Peter Lendrum/](https://directory.westernsydney.edu.au/search/name/Peter%20Lendrum/))

Description Engineering computing is an introduction to using computation to solve real problems. The subject also aims to instil sound principles of program design that can be utilised in many subjects throughout the students' course. The basic elements and structures of a high level language are taught. Students are exposed to numerous engineering problems and are encouraged to implement solutions using an algorithmic approach.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Utilise a typical software development environment.
2. Develop solutions to problems using an algorithmic approach.
3. Apply data structures of a common programming language, to translate an algorithm into a coded program. These programming structures should include the following as a minimum - Selection and Repetition statements - Functions - 1 & 2 dimensional Arrays - File processing
4. Implement basic features of data manipulation and graphing using a spreadsheet program, such as EXCEL.

Subject Content

Spread sheet applications - Spread sheet operations

Spreadsheet applications - Spreadsheet functions and macros

Spread sheet applications - Solving engineering problems using spreadsheets

Structured programming - Introduction to programming environment

Structured programming - Decision structures

Structured programming - Repetition structures

Structured programming - Modular programming

Structured programming - Exchanging data with external files

Problem solving & algorithm development will be embedded in each section

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are

regularly updated, where there is a difference your Learning Guide takes precedence.
