

MEDI 7039 CLINICAL PRACTICE IN DIABETES 1

Credit Points 10

Legacy Code 401284

Coordinator Cathy Wilson ([https://directory.westernsydney.edu.au/search/name/Cathy Wilson/](https://directory.westernsydney.edu.au/search/name/Cathy%20Wilson/))

Description This subject introduces students to the aetiology, pathophysiology and clinical picture of the various types of diabetes and the short and long term physical impact on individuals. This is the basis for all clinical subjects in this course. Students will comprehensively examine the overall management of the different types of diabetes that are fundamental for advance and specialised diabetes clinical practice.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program with evidence of 12 month clinically relevant practice or substantial experience in working with people with diabetes

Assumed Knowledge

Basic knowledge and understanding of diabetes pathophysiology and sufficient experience working with diabetes patients in a clinical setting.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the classification, aetiology and pathophysiology of the three major types of Diabetes
2. Integrate lifestyle modification and Medical Nutrition Therapy as an integral part in the management of DM
3. Analyse diagnostic criteria and treatment target ranges for each of the three major types of diabetes to determine treatment and management options for each type of diabetes
4. Provide education and training on the pharmacodynamics of oral agents, insulin and other injectable medication in the management of DM
5. Apply best practice guidelines, clinical recommendations and evidence based practice to support diabetes education

Subject Content

1. Aetiology and pathophysiology of diabetes assessment and management
2. Diabetes Medication Management
3. Blood Glucose Monitoring
4. Understanding of the interrelationship between nutrition, exercise, stress, and medications on diabetes and prediabetes management
5. Acute complications of diabetes Hypoglycaemia
6. Hyperglycaemic states
7. Sick day management
8. Immunisation for people with diabetes
9. Implications for driving and reporting

10. Clinical management considerations for identified population groups (Elderly, Paediatric and Diabetes in pregnancy)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/Group Task
Quiz	45 minutes	15	N	Individual
Quiz	45 minutes	15	N	Individual
Quiz	30 minutes	10	N	Individual
Case Study	2,000 words	40	N	Individual
Participation	Ongoing	20	N	Individual
