ACCT 0002 Accounting Fundamentals (WSTC)

Credit Points 5

Legacy Code 900010

Coordinator Abdullah Al Abed ([https://directory.westernsydney.edu.au/search/name/Abdullah Al Abed/](https://directory.westernsydney.edu.au/search/name/Abdullah%20Al%20Abed/))

Description Accounting is the practice of recording, classifying, summarising, analysing and interpreting information, of a commercial nature for the purpose of helping people make decisions. In the world of business, the role of accounting is to support management in providing timely and accurate financial information about the business so that informed decisions can be made. This unit examines the basic principles underpinning accounting and connects the accounting process to financial decision making for a business.

School Western Sydney The College

Discipline Accounting

Student Contribution Band HECS Band 4 5cp

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects ACCT 0001 - Accounting Fundamentals (WSTC Prep)

Restrictions Students must be enrolled in a Western Sydney University The College Foundation Studies program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the role of Accounting in business
2. Explain basic Accounting principles and standards.
3. Complete Analysis Charts and record transaction details
4. Construct basic financial statements.
5. Demonstrate simple budgeting and CVP analysis skills.
6. Apply accounting knowledge in basic financial decision-making

Subject Content

Topic 1 What is Accounting?

Forms of ownership

The nature, purpose, role and main principles of accounting

The accounting equation

Topic 2 Recording transactions

Transaction analysis

Organisation of accounting information through the double entry system

Topic 3 Preparation of Financial Statements

The main financial summaries used by accountants

Topic 4 Management Accounting

Budgeting

Basic cost behavior and CVP analysis

Topic 5 Accounting for financial decision-making

The financial environment of business

Interpretation of financial statements

Impact of decisions based on interpretation of financial statements

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	1 hr	10	N	Individual
Intra-session Exam	1 hr	20	N	Individual
Participation	Weekly	10	N	Individual
Case Study	1.5 hrs	20	N	Individual
Final Exam	2 hrs	40	N	Individual

Teaching Periods

ACCT 0003 Fundamentals of Finance and Accounting

Credit Points 10

Legacy Code 201034

Coordinator Mark Thomas ([https://directory.westernsydney.edu.au/search/name/Mark Thomas/](https://directory.westernsydney.edu.au/search/name/Mark%20Thomas/))

Description In this unit, students will be introduced to the fundamentals of finance and accounting for business. Students will learn to

apply numerical skills within the areas of finance and accounting in preparation for post-graduate study. Financial information will be analysed and interpreted for the purpose of decision-making in a range of corporate contexts. Students will be required to demonstrate an understanding of ethical conduct and best practice reporting in undertaking financial and accounting processes.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 0 Preparatory subject

Restrictions Students must be enrolled in programs 2811 Masters Qualifying Program or 2812 Masters Qualifying Program with Concurrent English.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain fundamental concepts in finance and accounting;
2. Demonstrate numeracy skills for business application;
3. Analyse and interpret financial information;
4. Communicate financial knowledge for decision-making;
5. Describe the importance of ethical practice in a financial context.

Subject Content

Introduction to finance and accounting
Accounting for business transactions
Financial statements
Financial analysis
Investment and financing decisions
Corporate decision-making
Ethical practice in finance and accounting
Reporting in finance and accounting

Assessment

ACCT 1001 Accounting Information for Managers

Credit Points 10

Legacy Code 200101

Coordinator Helen Black ([https://directory.westernsydney.edu.au/search/name/Helen Black/](https://directory.westernsydney.edu.au/search/name/Helen%20Black/))

Description This subject provides exposure to financial and management accounting information from the viewpoint of a non-accounting specialist. The subject aims to provide breadth of awareness and knowledge in relevant fields of accounting essential to decision making for managers.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects ACCT 1003 - Accounting Information for Managers (WSTC) ACCT 1002 - Accounting Information for Managers (Creative Industries)

Incompatible Subjects ACCT 1005 - Accounting in Context ACCT 1006 Accounting in Context (WSTC)

Restrictions

This subject is not available for students enrolled in 2783 Bachelor of Accounting, 2785 B Act/LLB, 3738 BICT/B Bus (Accounting).

Students in 2739 BBC, 2753 BBC, 2786 BBus, 2788 B Bus/LLB, 6037 Dip Bus/B Bus and 2787 BBus (ABL) must seek permission before enrolling in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the purpose and role of accounting information;
2. Outline employer obligations in business management;
3. Analyse common business transactions;
4. Apply GST in context of business transactions and construct a BAS;
5. Prepare and analyse financial reports at an introductory level;
6. Construct and evaluate budgets;
7. Interpret accounting information to make business decisions.

Subject Content

- The role and purpose of accounting information
- Business structures
- Employer obligations
- Accounting concepts and principles
- Business transaction analysis in the accounting process
- Goods and Services Tax (GST) and Business Activity Statements (BAS)
- Financial statement preparation, interpretation and performance analysis
- Budgeting - planning and control
- Project appraisal

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ACCT 1003 Accounting Information for Managers (WSTC)

Credit Points 10

Legacy Code 700005

Coordinator Abdullah Al Abed ([https://directory.westernsydney.edu.au/search/name/Abdullah Al Abed/](https://directory.westernsydney.edu.au/search/name/Abdullah%20Al%20Abed/))

Description This unit provides exposure to financial and management accounting information from the viewpoint of a non-accounting specialist. The unit aims to provide breadth of awareness and knowledge in relevant fields of accounting essential to decision making for managers.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects ACCT 1001 - Accounting Information for Managers

Incompatible Subjects ACCT 1005 Accounting in Context ACCT 1006 Accounting in Context (WSTC)

Restrictions Students must be enrolled at Western Sydney University, The College. Students enrolled in Extended Diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject. Students enrolled in the combined Diploma/Bachelor programs listed below must pass all College Preparatory subjects listed in the program structure before progressing to the Year Two subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the purpose and role of accounting information;
2. Outline employer obligations in business management;
3. Analyse common business transactions;

4. Apply GST in context of business transactions and construct a BAS;
5. Prepare and analyse financial reports at an introductory level;
6. Construct and evaluate budgets;
7. Interpret accounting information to make business decisions.

Subject Content

1. The role and purpose of accounting information
2. Business structures
3. Employer obligations
4. Accounting concepts and principles
5. Business transaction analysis in the accounting process
6. Goods and Services Tax (GST) and Business Activity Statements (BAS)
7. Financial statement preparation, interpretation and performance analysis
8. Budgeting ? planning and control
9. Cost behaviour

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Portfolio	2,500 words	30	N	Individual
Quiz	60 minutes	5	N	Individual
Intra-session Exam	80 minutes	15	N	Individual
End-of-session Exam	2 hours	50	Y	Individual

Prescribed Texts

Teaching Periods

ACCT 1005 Accounting in Context

Credit Points 10

Legacy Code 200972

Coordinator Helen Black ([https://directory.westernsydney.edu.au/search/name/Helen Black/](https://directory.westernsydney.edu.au/search/name/Helen%20Black/))

Description Accounting in Context is the first core subject required in the accredited accounting program, but can be included as an elective in other programs. It is designed to provide an overarching context about the purpose and usefulness of accounting information and explain a range of definitions and terms used in accounting and business. Accounting in Context will introduce accounting reports and their interpretation, and explore the impact of policy and measurement methods on accounting information and business decisions. Successful completion of the subject will equip participants with an understanding of the importance of accounting to society and allow them to engage with the next core accounting subject; Financial Accounting Applications.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects ACCT 1006 - Accounting in Context (WSTC) ACCT 1004 - Accounting Reports and Decisions

Incompatible Subjects ACCT 1001 - Accounting Information for Managers ACCT 1003 - Accounting Information for Managers (WSTC)

Restrictions

This subject is not available to students enrolled in programs 2607 Bachelor of Construction Management, 2769 Bachelor of Construction Management Studies/Bachelor of Laws, 3692 Bachelor of Construction Technology, 3727 Bachelor of Building Design Management. Students enrolled in these programs must complete subject ACCT 1001 - Accounting Information for Managers.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the usefulness of accounting for decision making.
2. Analyse the ethical, regulatory and sustainability dimensions of accounting.
3. Demonstrate through real-world examples how accounting concepts apply to businesses in the 21st century.
4. Analyse how different accounting techniques impact on accounting information.
5. Demonstrate skills in research and communication.

Subject Content

1. What is accounting and its purpose?
2. Who uses accounting information and how is it used for decision making?
3. What does accounting information look like for different business structures?
4. The regulatory, ethical and sustainability dimensions of accounting.
5. Accounting terms, principles and concepts.
6. Applying the definition and recognition of balance sheet items (assets, liabilities and equity) to a business case study.
7. Applying the definition and recognition of income statement items (income and expenses) to a business case study.
8. Business transactions ? recognising, classifying and recording.
9. Exploring the accounting equation.
10. Accounting Techniques: the impact of policies and measurement methods on accounting information and business decisions.
11. Interpreting financial statements.

ACCT 1007 Financial Accounting Applications

Credit Points 10

Legacy Code 200111

Coordinator Mamun Billah ([https://directory.westernsydney.edu.au/search/name/Mamun Billah/](https://directory.westernsydney.edu.au/search/name/Mamun%20Billah/))

Description This unit gives students the practical skills necessary to analyse the accounting transactions of an entity, and then be able to measure and record these transactions in a systematic manner for the preparation of simple financial statements.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Pre-requisite(s) ACCT 1001 OR ACCT 1005

Equivalent Subjects LGYB 3521 - Introductory Financial Accounting ACCT 1008 - Financial Accounting Applications (UWSC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain and apply the accounting elements (assets, liabilities, equity, revenues and expenses) and the underlying principles and relationships of the elements for the purpose of periodic financial reporting.
2. Identify components of the accounting cycle.
3. Prepare journalising and posting transactions to general and subsidiary ledgers and complete a trial balance.
4. Prepare financial statements for simple business structures using manual based and computerised accounting systems.
5. Apply the conceptual framework and accounting standards to account for different types of transactions.

Subject Content

1. Revision of material from subject 200972 Accounting in Context.
2. Extension of the accounting cycle and accounting processes.
3. Double entry accounting.
4. Accounting for GST
5. Transferring information from journal to the ledger.
6. Recording of inventory (perpetual and periodic systems), valuation methods, and depreciation of non-current assets.
7. Trial balance.
8. Bank Reconciliation.
9. Preparation of simple financial statements.
10. Partnership formation.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task

Pre-requisite(s) FINC 1001

Equivalent Subjects LGYA 9774 - Advanced Management Accounting
LGYB 3530 - Advanced Management Accounting (V1) LGYB 8951 - Management Accounting

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appraise the limitations of traditional management accounting techniques in the contemporary business environment;
2. Explain the basic strategy concepts and how management accounting systems can support business strategy;
3. Analyse information, prepare management accounting reports and oral presentations to assist management in decision making, resource management and value creation;
4. Identify the factors that influence the design of management accounting systems (MAS) and choice of contemporary management accounting technique;
5. Design a strategic performance measurement system using the balanced scorecard to incorporate non-financial performance measures;
6. Recommend and apply contemporary management accounting techniques to real life scenarios by considering the purpose, benefits and limitations of the techniques.

Subject Content

- Balanced score card, key performance indicators, performance benchmarking
- Profitability analysis
- Product life cycle and Target costing
- pricing and Product mix decisions
- business process re-Engineering
- inventory management techniques
- quality management: measurement and control, and cost of quality reports
- Productivity: measurement and control, Productivity analysis, value added, non-value added
- value chain analysis
- strategic management accounting
- Behavioural Issues, performance related remuneration
- sustainability and environmental management accounting

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Practical	Weekly	10	N	Individual
Quiz	5 times throughout teaching term	10	N	Individual
Case Study	2000 words	20	N	Group
Final Exam	2 hours	60	Y	Individual

ACCT 2003 Financial Statement Analysis (UG)

Credit Points 10

Legacy Code 200582

Coordinator Nicole Ibbett ([https://directory.westernsydney.edu.au/search/name/Nicole Ibbett/](https://directory.westernsydney.edu.au/search/name/Nicole%20Ibbett/))

Description This unit provides a substantial grounding in the theories and practices of financial statement analysis so as to enable the student to make knowledgeable decisions relating to the financial analysis of firms. Topics covered include an overview of financial reporting, income vs cash flows, overview of financial statement analysis, data issues in analysing financial statements, GAAP and income recognition and asset valuation, GAAP and liability recognition and related expenses, GAAP. inter-corporate entities, profitability analysis, risk analysis, pro forma financial statements, valuation using cash flows and valuation using earnings.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects ACCT 2002 - Financial Statement Analysis

Assumed Knowledge

Successful completion of principles of accounting, finance and business statistics subjects at university level.

Learning Outcomes

On successful completion of this subject, students should be able to:

- Identify and understand the impact of the prevailing economic and business environment and their effect on a company's performance.
- Analyse financial reporting objectives, processes and outcomes.
- Analyse financing, investing, and operating activities.
- Apply financial analysis to assess liquidity, solvency, performance, financial direction and valuation (historical and prospective).
- Have a critical knowledge of the literature relevant to financial statement analysis.
- Relate the financial statement analysis literature to real world situations.

Subject Content

This subject begins with a discussion of the role of accounting information and intermediaries in the economy, and how financial analysis can create value in well-functioning markets. Four key components of effective financial statement analysis are identified:

- business strategy analysis
- accounting analysis
- financial analysis
- Prospective analysis

Equivalent Subjects ACCT 3008 - Financial Accounting Issues LGYA 9763 - The Anatomy of Financial Accounting

Incompatible Subjects LGYB 3531 - Advanced Financial Accounting LGYB 8985 - Financial Accounting 3

Assumed Knowledge

Sufficient grasp of introductory accounting to competently prepare external financial statements.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recall the nature of, analyse and apply basic accounting theory;
2. Recall the elements of the international accounting conceptual framework;
3. Apply the conceptual framework and accounting standards to account for different types of transactions;
4. Appraise the usefulness of information in accounting reports for decision making purposes.

Subject Content

- An introduction to accounting theory and Critical analysis
- development and evaluation of accounting Standards and conceptual frameworks
- Critical analysis of The historical cost accounting system
- Accounting for assets, liabilities and owners' equity and presentation in financial statements
- accounting for revenues and expenses and presentation in financial statements
- construction of A statement of comprehensive income

ACCT 2005 Techniques in Financial Accounting

Credit Points 10

Legacy Code 200973

Coordinator Kristina Vojvoda ([https://directory.westernsydney.edu.au/search/name/Kristina Vojvoda/](https://directory.westernsydney.edu.au/search/name/Kristina%20Vojvoda/))

Description Techniques in Financial Accounting is the third unit in the financial accounting stream and builds upon Financial Accounting Applications as part of the accredited accounting program. It introduces a company as a business structure and the accounting requirements for their formation and operations. The unit advances tools required for accurate record keeping leading to compilation of financial statements. The unit teaches participants how to account for receivables and payables, the disposal of non-current assets, and preparation of cash flow statements. Successful completion of the unit will equip participants with a practical and theoretical understanding of usefulness of general purpose financial reports.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) ACCT 1007

Incompatible Subjects ACCT 2004 Intermediate Financial Accounting

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an in depth understanding of the accounting cycle in relation to reporting entities.
2. Prepare financial statements for a company business structure using a manual based accounting system.
3. Demonstrate competency in the preparation of general purpose financial reports for reporting entities by application of accounting principles.
4. Critically analyse and apply basic accounting theory.

Subject Content

1. Revision of debit and credits and introducing company structure.
2. Companies: formation and operations.
3. Reconstruction of accounts and error correction.
4. End of period adjustments. Depreciation and amortisation.
5. Closing and reversing entries.
6. Ten column worksheet and financial statement compilation.
7. Accounting for receivables and payables.
8. Non-current asset disposal.
9. Preparation of cash flows.
10. Accounting theories.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ACCT 3001 Accounting Information Systems

Credit Points 10

Legacy Code 200534

Coordinator Daniel Yeung ([https://directory.westernsydney.edu.au/search/name/Daniel Yeung/](https://directory.westernsydney.edu.au/search/name/Daniel%20Yeung/))

Description This unit considers the design and implementation of accounting information systems as a data model for resource allocation and management of an organisation. It includes consideration of current trends in information management and the changing regulatory requirements.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) FINC 1001

Equivalent Subjects LGYB 3524 - Accounting Information Systems
LGYA 9783 - Accounting Information Systems ACCT 3010 - Issues in Accounting Information Systems

Assumed Knowledge

Basic financial and management accounting fundamentals, including use of spreadsheets in accounting and the use of a computerised accounting package.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse and evaluate accounting information needs;
2. Apply internal control principles and to devise specific procedures to deter threats from fraud or waste ? in both manual and electronic environments;
3. Apply design principles and tools in the development of an AIS;
4. Evaluate different types of information systems;
5. Identify the stages of information systems development, needs for continuous maintenance and improvement and strategies commonly used to enable an organisation to maintain a strategic position;
6. Identify the benefits and costs in adopting ERP systems;
7. Follow developments and issues involved when reporting financial results in an open electronic environment.

Subject Content

- instruction in system analysis, design, implementation and maintenance
- data modelling and data base design
- Critical evaluation of Internal control Issues including those related to E-commerce
- evaluation of different types of AIS
- data transfer and customised design of accounting reports

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ACCT 3003 Accounting Standards and Governance

Credit Points 10

Legacy Code 200974

Coordinator Krishan Prasad ([https://directory.westernsydney.edu.au/search/name/Krishan Prasad/](https://directory.westernsydney.edu.au/search/name/Krishan%20Prasad/))

Description This unit builds on the first and second year accounting units, exploring financial reporting issues in greater depth and challenging students to question the foundations of financial reporting. Based on International Financial Reporting Standards (IFRS) and the Australian Accounting Standards Board equivalents (AASB), topics include the regulatory, theoretical and conceptual foundations of financial reporting; corporate social responsibility; accounting for revenue, expenses, liabilities, equity and intangibles; recognition, measurement, revaluation and impairment of different types of assets; accounting for leases; Accounting for financial instruments: accounting for employee benefits; revenue recognition and other comprehensive income; and financial statement analysis. The unit develops graduate capabilities centred upon critical thinking skills, technical skills and professional judgement and their application for solving practical financial reporting and environmental social governance issues.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) ACCT 2005

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the need for financial accounting regulation by employing appropriate theories.
2. Apply the rules of International Financial Reporting Standards/ International Accounting Standards (IFRS/IAS) and their Australian equivalents (AASB) to selected financial transactions and events.
3. Analyse financial transactions and events in order to prepare a complete set of financial statements based on accrual accounting.
4. Analyse financial statements.
5. Demonstrate business communication skills through written assignments and seminar presentations.

6. Apply environmental social governance (ESG) in analysis of financial statements.

Subject Content

1. Accounting regulation, conceptual framework and accounting for liabilities revenue, expenses, equity and intangibles.
2. Applying accounting standards and accounting theory.
3. Accounting for property plant and equipment: revaluations.
4. Accounting for impairment: intangibles.
5. Accounting for financial instruments.
6. Accounting for revenues.
7. Accounting for employee benefits.
8. Accounting for leasing.
9. Accounting for different types of business structures: equity and share capital.
10. Financial statement analysis.
11. Corporate social responsibility (CSR) and environmental social governance (ESG).

ACCT 3004 Advanced Accounting

Credit Points 10

Legacy Code 200267

Coordinator Krishan Prasad ([https://directory.westernsydney.edu.au/search/name/Krishan Prasad/](https://directory.westernsydney.edu.au/search/name/Krishan%20Prasad/))

Description This unit addresses the advanced aspects of accounting. Accounting theories are discussed in terms of how they assist us in understanding current accounting practice and accounting standards. In addition, theoretical concepts are applied to current news and real world events.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) ACCT 3007

Equivalent Subjects ACCT 3002 - Accounting Philosophies and Theories LGYB 3531 - Advanced Financial Accounting (V1)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically evaluate accounting theories;
2. Interpret practice and rules through appropriate theoretical analysis;
3. Analyse and understand the current implications and impacts of financial reporting practices;
4. Demonstrate critical thought through communicating good arguments both orally and in writing;
5. Work in a team environment and negotiate possible explanations or solutions which lead to successful outcomes;
6. Explain the notion of power and control in corporate structures.

Subject Content

- The nature of accounting theories and their justification
- applications of those theories through practical exercises and linkages to current practice and real World events, to reinforce previously learnt accounting skills
- Critical evaluation of theories of accounting and theories related to The development and regulation of accounting
- Examination and application of selected topical and complex accounting Standards for Examination in depth

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task

ACCT 3007 Corporate Accounting Systems

Credit Points 10

Legacy Code 200109

Coordinator Yongqing Li ([https://directory.westernsydney.edu.au/search/name/Yongqing Li/](https://directory.westernsydney.edu.au/search/name/Yongqing%20Li/))

Description This unit builds on the fundamental knowledge of accounting procedures gained in prerequisite units. It involves the comprehensive study of aspects of corporate accounting and reporting which are regulated by legislation, accounting standards, Australian Securities and Investment Commission and Stock Exchange requirements. This unit is designed to provide students with grounding in the regulation and practice of corporate reporting in Australia. The major orientation is towards the theoretical and practical aspects of corporate reporting, whilst at the same time exploring the reasons for regulatory disclosures.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Co-requisite(s) ACCT 2004 OR ACCT 3003

Equivalent Subjects LGYB 3525 Corporate Accounting LGYB 8944 Corporate Accounting LGYA 9764 Corporate Accounting

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply Australian Accounting Standards, International Accounting Standards and The Corporations Act insofar as they relate to reporting requirements of a reporting entity;
2. Prepare financial statements in accordance with relevant accounting standards and Corporations Act;
3. Apply appropriate disclosure requirements to annual reports;
4. Apply reporting requirements for related and associated companies, joint ventures and company groups;
5. Assess theoretical and ethical issues in corporate reporting and the reporting environment.

Subject Content

Conceptual framework, corporate governance and professional bodies
Cash flow statement and disclosure requirements
Tax effect accounting (introduction and advanced concepts)
Consolidation and equity accounting (introduction, intragroup transactions, NCI and associates/joint ventures)
Disclosure issues ? can include: after reporting date events, prior period errors, change in accounting estimates, segment reporting, related party transactions, EPS
Foreign currency transactions

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Self-Assessment	90 minutes	S/U	Y	Individual
Portfolio	Semester long-equivalent to 500 words	10	N	Individual
Applied Project	1,000 words	20	N	Individual
Intra-session Exam	1 hour	20	N	Individual
Final Exam	2 hours	50	Y	Individual

ACCT 3009 Incubator 4: Commercial and Financial Setting of Entrepreneurship

Credit Points 10

Legacy Code 301169

Coordinator Anton Bogdanovych ([https://directory.westernsydney.edu.au/search/name/Anton Bogdanovych/](https://directory.westernsydney.edu.au/search/name/Anton%20Bogdanovych/))

Description Operating a start-up is not just about being creative and innovative; it is also about having the necessary management and operational skills, understanding the commercial and financial setting within which the organisation needs to operate it. This unit aims to provide vital details that set the background to run your organisation whether your customer base is local, national or even international. This objective is driven through a number of topics such as: setting up a business entity, accounting fundamentals, taxation fundamentals. The unit will be delivered through a number of modules. As a vital part of the unit, students are expected to engage and work in "start-up co-working space" on a regular basis. At the successful completion of this unit, students would set up as a business entity for their start-up organisation.

School Computer, Data & Math Sciences

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and apply the process involved in setting up a business entity
2. Identify business accounting needs and chose appropriate accounting structure
3. Investigate how the Australian and international taxation structures applies to start-ups
4. Demonstrate an understanding of interpreting accounting documents that are commonly used in a business setting
5. Apply individual skills and knowledge in a collaborative and effective manner in achieving a common goal in a group setting
6. Demonstrate effective verbal and written communication skills that appeal to a wide audience

Subject Content

- 1) Setting up a business entity in Australia
- 2) Understanding various accounting statements, such as, Income statements, Statement of Cash flow, Balance Sheet, Profit and Loss accounts
- 3) Banking structure and setting up business accounts
- 4) Taxation structure and how it affects start-ups

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Case Study	1500 words	35	N	Individual

ACCT 3011 The Accountant as a Consultant

Credit Points 10

Legacy Code 200118

Coordinator Sharne Simmons ([https://directory.westernsydney.edu.au/search/name/Sharne Simmons/](https://directory.westernsydney.edu.au/search/name/Sharne%20Simmons/))

Description This unit aims to provide students with a 'hands on' flexible and practical work integrated learning (WIL) experience in the Accounting degree. This is mainly done through working in groups on projects as accountants would do when they engage with clients and entrepreneurs as professional consultants. Students come to understand the role of an accountant in the effective management of the business to sustain, grow and expand the business to higher levels consulting problems involving a wide range of business related issues. This unit is designed to give students an opportunity to apply the theoretical knowledge gained in other units in their degree program thus enabling them to bring knowledge to life. On successful completion of this unit students will be able to appreciate the relevance of their business subjects/units in real business situations and to become business consultants.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) ACCT 2001

Equivalent Subjects LGYB 8986 - The Accountant as a Management Consultant

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appreciate the kinds of problems encountered by local businesses/ organisations and the symptoms that will be apparent in their accounts;
2. Analyse and solve various business problems using case study approaches;
3. Develop skills in financial and strategic planning for small business;
4. Enhance report writing and verbal communication skills;
5. Demonstrate a foundation of ethical thinking in commercial engagements;
6. Demonstrate an understanding of the role an accountant as a consultant provides to business.
7. Analyse a business problem encountered by any for- profit, a not-for profit, or a government organisation, and its impact on stakeholders;
8. Apply appropriate accounting research methods and tools to solve problems;
9. Use appropriate communication methods, verbal and written, to convey information;
10. Work productively, in a group of consultants, to solve and report on a business problem;
11. Develop a project tender which includes appropriate curriculum vitae;
12. Present project findings to an audience of peers or industry professionals.

Subject Content

- strategic thinking and strategic accounting
- financial and management accounting
- Regulatory Issues
- client management Issues
- financial management
- business or professional ethics
- Entrepreneurship ? Background on The role of The entrepreneurial profile
- Marketing of businesses including pricing of products and services
- business and succession planning
- Internal control
- Project tenders including curriculum Vitae

ACCT 7005 Accounting Theory and Applications

Credit Points 10

Legacy Code 200401

Coordinator Peter Humphreys ([https://directory.westernsydney.edu.au/search/name/Peter Humphreys/](https://directory.westernsydney.edu.au/search/name/Peter%20Humphreys/))

Description Basic questions of the role accounting performs in society are considered from economic, social and environmental perspectives. The nature of the statements advanced to give accounting legitimacy, together with their philosophical underpinnings, are examined. Selected accounting theories and philosophies will be examined and advanced applications in alternative accounting models considered. Accounting research and appropriate methodologies are introduced.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) ACCT 7010

Equivalent Subjects LGYA 8980 - Financial Accounting D (PG)

Restrictions

Students must be enrolled in a postgraduate Business program or in programs 8083 Bachelor of Research Studies, 8084 Master of Research (HC) and 8085 Master of Research (LC). The prerequisite requirement noted above does not apply to students enrolled in programs 8083 Bachelor of Research Studies, 8084 Master of Research (HC) and 8085 Master of Research (LC). Students wishing to take this subject as an elective need approval from the program Advisor.

Assumed Knowledge

Basic knowledge of accounting principles.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Articulate the role of accounting in society;
2. Demonstrate an awareness of the differing perspectives from which accounting may be assessed;
3. Critically analyse a selection of accounting theories and present those ideas to a group;
4. Demonstrate an ability to work in small groups;
5. Critique contemporary issues in accounting;
6. Demonstrate an ability to utilise research methods applicable to applied accounting research.

Subject Content

Role of accounting in society

Introduction to methodology for knowledge recognition, reasoning, critical thinking

What accounting research currently involves

How to conduct useful accounting research

Different types of theories, including critical accounting theory

Different models for measurement of profit and of wealth

Human behaviour, particularly in organisations and its relevance for accounting theory

ACCT 7010 Company Accounting

Credit Points 10

Legacy Code 200400

Coordinator Yongqing Li ([https://directory.westernsydney.edu.au/search/name/Yongqing Li/](https://directory.westernsydney.edu.au/search/name/Yongqing%20Li/))

Description The aim of this unit is to extend the fundamental accounting skills gained in Introductory Accounting to application of the more advanced accounting and reporting issues created by corporate structures. Students will learn how to prepare consolidated financial statements, with associated disclosures, to ensure compliance with accounting standards, corporations legislation and Australian Stock Exchange (ASX) requirements. Through a range of practical individual and collaborative means students will explore corporate accountability and the reasons for regulatory disclosure.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) ACCT 7018

Restrictions

Students must be enrolled in a postgraduate Business program. Students wishing to take this subject as an elective need approval from the program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Prepare a set of consolidated financial statements for wholly owned and partly owned organisations and critically evaluate the consolidation process;
2. Account for associates and joint ventures and critically evaluate the usefulness of the reported information;
3. Prepare a statement of cash flow for publication and critically evaluate the information content;
4. Calculate the tax effect of reported income and prepare disclosures for publication of tax consequences;
5. Calculate earnings per share and diluted earnings per share for a reporting entity;
6. Deconstruct reported financial data for a group into segment information appropriate for disclosure;
7. Discuss corporate accountability within the AASB Framework and the Conceptual Framework with specific reference to the topics covered in the subject.

Subject Content

Accounting standards (standard setters, regulation and application)

Nature of a reporting entity

Revaluations of non-current assets

Tax effect accounting

Consolidations

Disclosure issues (events after reporting data; segment reporting; related party disclosures; EPS)

Cash flows

Associated companies (joint ventures)

ACCT 7012 Corporate Finance

Credit Points 10

Legacy Code 200426

Coordinator Linda Wu ([https://directory.westernsydney.edu.au/search/name/Linda Wu/](https://directory.westernsydney.edu.au/search/name/Linda%20Wu/))

Description As an introductory finance unit, Corporate Finance introduces students to the fundamental concepts of finance theory - the time value of money, risk and return, capital budgeting and capital structure - and to the tools of financial decision-making in the context of the Australian institutional environment. Students examine the investment, financing and dividend decisions of corporations and develop an understanding of the basic practices of financial management from the perspective of both large and small firms.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 8876 - Finance LGYA 8986 - Corporate Finance (PG)

Restrictions

Students must be enrolled in a postgraduate Business program or 3693 Master of Engineering.

Assumed Knowledge

Secondary school mathematics, and introductory economics or microeconomics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand and apply the fundamental concepts and theories of corporate finance,
2. Identify the factors affecting corporate financial decisions,
3. Employ financial techniques to evaluate financial assets and corporate investments,
4. Apply financial tools to corporate risk management,
5. Understand corporate financial decisions within the Australian institutional context.

Subject Content

Introduction to corporate financial management

Time Value of Money

Valuing shares and bonds

Introduction to capital budgeting

Application of capital budgeting

Risk and return

The cost of capital

Leverage and capital structure

Dividend policy

ACCT 7013 Financial Decision Making

Credit Points 10

Legacy Code 200784

Coordinator Andrew Han ([https://directory.westernsydney.edu.au/search/name/Andrew Han/](https://directory.westernsydney.edu.au/search/name/Andrew%20Han/))

Description Students will gain financial literacy through practical understanding of the information contained in financial reports. Appreciating the variety of uses of accounting information for planning and controlling enhances the ability to extract relevant data. This unit emphasises the function of both financial and management accounting in measuring, processing and communicating information useful for decision making.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects ACCT 7001 - Accounting Perspectives for Managers

Incompatible Subjects ACCT 7018 -Introductory Accounting ACCT 7007 - Accounting A Business Perspective

Restrictions

Students must be enrolled in 2755 Master of Business Administration, 2756 Graduate Diploma in Business Administration (Exit Only), 2757 Graduate Certificate in Business Administration, 2762 Executive Master of Business Administration.

Assumed Knowledge

A knowledge of basic mathematics is assumed.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret the basic terms and concepts of both financial accounting and management accounting enabling interpretation of information in financial reports;
2. Identify the role and limitations of general purpose financial statements in providing information for decision making;
3. Use financial analysis tools to evaluate external financial reports for performance, position and working capital requirements;
4. Apply cost behaviour concepts and various costing systems to decision making;
5. Demonstrate an understanding of the significance of budgets for planning and control;
6. Analyse internal accounting reports for performance evaluation.

Subject Content

- Usefulness of accounting information for decision making
- structure and use of financial accounting reports
- analysis of financial accounting reports
- structure and use of management accounting information, including cost behaviour and budgets
- analysis of management accounting information

ACCT 7016 Information Systems for Accountants

Credit Points 10

Legacy Code 200399

Coordinator Daniel Yeung ([https://directory.westernsydney.edu.au/search/name/Daniel Yeung/](https://directory.westernsydney.edu.au/search/name/Daniel%20Yeung/))

Description The aim of this unit is to examine the theory and application of information technology on the accounting discipline. This unit covers principles of systems analysis, design and database management relating to accounting information systems. The functions, control, data and processes of accounting information systems are discussed in the context of businesses. Students learn about the communication of accounting information through the internet and explore further the development of integrated systems using a blended learning design approach.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) ACCT 7018

Restrictions

Students wishing to enrol in this subject as an elective must gain approval from an Academic program Advisor (Accounting) and must be enrolled in a postgraduate Business program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Document and evaluate an existing accounting information system;
2. Describe and explain the design and control of computerised accounting systems;
3. Demonstrate experience with discipline appropriate software packages;
4. Communicate effectively with systems professionals;
5. Evaluate current developments in accounting information system design.

Subject Content

Documenting Accounting Information Systems
 Systems Development Activities
 Database Management Systems and relational data model
 Controlling Accounting Information Systems
 Accounting Information Systems applications
 Electronic commerce
 Technology and future development of Accounting Information Systems

Assessment

ACCT 7018 Introductory Accounting

Credit Points 10

Legacy Code 200396

Coordinator Yongqing Li ([https://directory.westernsydney.edu.au/search/name/Yongqing Li/](https://directory.westernsydney.edu.au/search/name/Yongqing%20Li/))

Description The aim of this unit is to provide a comprehensive introduction to contemporary financial accounting. This is an essential component in the understanding of the production and use of accounting information in business. This unit applies accounting concepts, standards and principles enabling students to be competent in the technical skills in accounting which is a fundamental tool for making economic decisions and for analysing and solving business problems. Students will learn to apply such concepts, standards and principles through a range of individual and collaborative means using a blended learning design that draws on current and future trends in the broad international context.

ACCT 7019 Management Accounting

Credit Points 10

Legacy Code 200494

Coordinator Mamun Billah ([https://directory.westernsydney.edu.au/search/name/Mamun Billah/](https://directory.westernsydney.edu.au/search/name/Mamun%20Billah/))

Description The fundamental purpose of any management accounting system in an organisation is to provide appropriate information for (i) costing of products and services; (ii) support functions such as planning, controlling, evaluation, continuous improvement and decision making; and (iii) competitive support. This provides financial and non-financial services to the management team to enhance the firm's competitiveness. The unit is designed to provide an understanding of

these areas of information through applying concepts, theories and models in a range of individual and collaborative activities.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) ACCT 7018

Equivalent Subjects LGYA 89821 - Management Accounting (PG)

Restrictions

Students wishing to enrol in this subject as an elective must seek approval of an Academic program Advisor (Accounting) and be enrolled in a postgraduate Business program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically evaluate the role of management accounting information and emerging issues in this area;
2. Appraise financial accounting and management accounting;
3. Apply a range of costing techniques including job costing, process costing and activity based costing;
4. Evaluate professional or enterprise practice in relation to culture and diversity in discipline-appropriate contexts (including first peoples/global) and make recommendations, including contingencies, alternatives and future implication;
5. Apply cost-profit volume analysis, segmental reporting and performance evaluation in decision-making;
6. Critically analyse quality cost information and its uses;
7. Prepare forecasts and budgets for planning and control.

Subject Content

Basic cost concepts and activity based costing
 Statistics for management accounting incorporating simple linear regression and correlation
 Job order and process costing
 Support department cost allocations
 Standard costing
 Budgeting
 Cost volume profit analysis and tactical decision making
 Responsibility accounting and performance evaluation in a decentralised firm
 Inventory management

Assessment

ACCT 7026 Behavioural Finance (PG)

Credit Points 10

Legacy Code 201038

Coordinator Peter Kavalamthara ([https://directory.westernsydney.edu.au/search/name/Peter Kavalamthara/](https://directory.westernsydney.edu.au/search/name/Peter%20Kavalamthara/))

Description Cognitive biases and emotional influences have the potential to influence the decision-making of advisors, managers and investors. This unit provides students with the skills to advise clients such that their investment decisions are soundly based. Various biases and influences are introduced to students to demonstrate how they undermine rational investment decision-making. Students are then taught how to apply methods that advisers can use to overcome and correct these biases. Ensuring clients are fully educated about investment decisions is integral to the investment process, and necessary to ensure advisers meet the best interest duty of their profession. This unit is available as a stand-alone bridging unit which is accredited by the Financial Adviser Standards and Ethics Authority (FASEA) having met the FASEA curriculum and standards requirements.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program or students who are currently registered on the national Financial Adviser Register (FAR) may take this subject as a non-award stand-alone subject in order to meet new education requirements as outlined by the Financial Adviser Standards and Ethics Authority (FASEA).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the different types of behavioural biases that client(s) exhibit;
2. Articulate the different approaches in decision-making client(s) may prefer;
3. Assess the linkages between behavioural biases and decision-making and implications for investment decisions made by client(s);
4. Explain the interactions between individuals and their financial capital;
5. Evaluate the role of behavioural finance in client engagement and the professional client relationship;
6. Critically assess investment strategies that are in the best interest of the client.

Subject Content

- introduction to Behavioural finance
- The types of biases influence client investment decisions
- ways of influencing client decisions to avoid cognitive and emotional biases
- how advisers can increase their own Understanding of client's needs and wants to guide their investment decisions
- Informing clients about The Risk and Reward trade-off
- Efficient markets and more realistic interpretations of markets
- theories of utility for client portfolio construction

AGEN 1001 Water Quality Assessment and Management

Credit Points 10

Legacy Code 300814

Coordinator Jack Isherwood ([https://directory.westernsydney.edu.au/search/name/Jack Isherwood/](https://directory.westernsydney.edu.au/search/name/Jack%20Isherwood/))

Description Water is essential for all life on earth. This unit will equip students with skills in biological, chemical and physical water quality assessment for a sustainable water future. The unit introduces students to healthy natural waterways and contrasting degraded waters impacted by disturbance from human activities. A broad range of pollutants, their sources and the consequences for human health and the ecology of water ways will be investigated. Management strategies will also be examined based on the sound scientific assessment of water quality. Students in this unit will cover water quality legislation, regulation, policy, guidelines and develop competencies in water monitoring, regulation, treatment and management.

School Science

Discipline Agriculture, Environmental and Related Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects AGEN 2002 - Water Quality Assessment and Management

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and select the physical, chemical and biological components as indicators of water quality.
2. Identify using physical, chemical and biological indicators when water is polluted and describe these pollutants including metals, polycyclic aromatic hydrocarbons, petrochemical (e.g. petrol, oils, greases), nitrates, phosphates, human and faecal waste.
3. Identify, describe and predict the origins, nature and impact of where water quality degradation may occur from industrial, commercial, residential, agricultural contamination at local, regional and national context. For example Stormwater runoff, leaking sewers in Sydney, dioxin release from the old Union Carbide site into Port Jackson and diffuse animal faecal pollution in areas such as Warragamba dam.
4. Design and plan field auditing protocols for pollution study.
5. Identify approaches put in place by the water authorities in terms of catchment management; water and sewage treatment; trade-waste management; stormwater management and treatment; land application (to minimise phytonutrients entering receiving waters); monitoring by health and water authorities.
6. Describe the basis of the legal framework used for water quality management, with particular reference to the Australian Drinking Water guidelines, and Australian and New Zealand Guidelines for Fresh and Marine Water Quality.
7. Interpret the results of water quality audits in the context of legal, regulatory compliance and scientific guidelines in water management issues and community accountability.
8. Explore the special issues of World and local water scarcity (with climate change implications), maintaining sustainable environmental flows, water recycling, stormwater harvesting, water-related health emergencies (boil-water alerts, Norovirus transmission), special ecological impacts (such as EDCs and hermaphroditism; biodiversity reduction) and important pollution case histories (eg: Minamata disaster).
9. Collect water samples aseptically and safely for a range of chemical and bacteriological analyses, specify tests required and the correct transportation medium and containers to ensure chain-of control during transportation with necessary documentation.
10. Gather, analyse and describe a variety of appropriate information sources.

Subject Content

Strategies for the identification and management of water, in the maintenance of water quality for recreational, domestic, industrial and agricultural uses, and for the protection of natural ecosystems. Water pollution and water management, identification of specific water pollution threats associated with operations in the built environment. These will be placed in the context of water use and availability patterns as pertaining to Australia in general and to NSW in particular. Assessment of indicators in the auditing of simple impacts on water quality in terms of domestic, recreational, agricultural and industrial uses, and ecosystem management needs.

Legislation and the interpretation of the legal framework used for water quality including drinking water management.
Field visit to sample water in various locations and/or waste water treatment and management sites.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

AGEN 3001 Animal Behaviour

Credit Points 10

Legacy Code 300878

Coordinator John Hunt ([https://directory.westernsydney.edu.au/search/name/John Hunt/](https://directory.westernsydney.edu.au/search/name/John%20Hunt/))

Description Focusing on a variety of wildlife and domestic animal species, the unit addresses how classic ecological and evolutionary principles shape animal behaviour by weighing the experimental and observational evidence for each idea. We illustrate concepts with examples from a wide range of taxonomic groups of animals in diverse ecosystems. Students will conduct experimental field and laboratory procedures, as well as observe and work with groups of animals on the UWS Hawkesbury campus.

School Science

Discipline Agriculture, Environmental and Related Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects AGEN 3002 - Animal Behaviour

Restrictions Successful completion of 120 credit points in the Bachelor of Science or Bachelor of Natural Sciences.

Learning Outcomes

On successful completion of this subject, students should be able to:

- Integrate basic evolutionary theory and genetics principles to determine how/why animal behaviour is both related to and shaped by evolution/genetics.
- Determine how cost/benefit/risk can be identified in the context of optimality and game theories to formulate and test ultimate and proximate hypotheses for behaviours.
- Describe the evolution of different reproductive strategies and mating patterns and strategies, and how tools such as phylogenetics and experimentation can be used to study it.

- Determine how the evolution of animal behaviour is used to understand aspects of human behaviour.
- Explain why understanding the ethology of companion animals and domestic stock is important in our interactions with them.
- Conduct field investigations safely and ethically in the field and laboratory, using sampling methodology correctly to obtain valid data.
- Use spreadsheets and statistical tools in analytical programs to enter, analyse and graph data and to draw appropriate conclusions from data.
- Communicate findings correctly in oral or in written form using an appropriate style, accessing the scientific literature to place the findings in context.

Subject Content

- The proximate control, organisation, and development of animal behaviour
- The ecological and evolutionary mechanisms underlying animal behaviour
- Foundational and contemporary theories of animal behaviour, as well as the application of animal behaviour
- General scientific and specific behavioural methodologies to test hypotheses and effectively communicate research using a range of scientific modes

Assessment

AGEN 4001 Researching our Changing Environment

Credit Points 10

Legacy Code 800195

Coordinator David Ellsworth ([https://directory.westernsydney.edu.au/search/name/David Ellsworth/](https://directory.westernsydney.edu.au/search/name/David%20Ellsworth/))

Description This unit focuses on learning to critically evaluate current research in topics under study at the Hawkesbury Institute for the Environment and how advanced scholarship in your field of study is conducted. The Hawkesbury Institute for the Environment spans a broad set of fields from soil microbial genomics and microbial ecology to the biogeochemistry, ecology and physiology of plants and microbes, animal ecology and evolution, to ecosystems, landscapes and Australia-wide processes. Teaching sessions are designed around a thematic cross-section of research within HIE, representing many of these areas. The unit also involves enhancing skill in evaluating appropriate research methodologies for asking questions and testing hypotheses, including an introduction to some of the large-scale research facilities within HIE that students may be involved with.

School Graduate Research School

Discipline Agriculture, Environmental and Related Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Restrictions Students must be enrolled in program 8083 Bachelor of Research Studies/Master of Research

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate knowledge of the various research fields within the Institute in which the student is based.
2. Align the student's statement of intent with a proposed research project relating to the research environment and expertise within the Hawkesbury Institute.
3. Critically analyse theoretical knowledge that will inform key perspectives in the student's research area.
4. Demonstrate understanding of techniques and methods involved in collecting, displaying and interpreting scientific data.
5. Understand how a literature review and a synthesis of data/information are carried out.

Subject Content

- This unit is designed for the Master of Research program, involving first-year Bachelor of Research/ Master of Research students. It exposes students to the research environment within the Hawkesbury Institute for the Environment, the various sub-disciplines within this

area of study, and the high-level research approaches taken within each of them.

- The unit will enable students to gain fluency in the various research fields within the Hawkesbury Institute and the literature and methods associated with them by:
- Analysing the research literature in the sub-disciplines encompassed by the Hawkesbury Institute for the Environment and understanding what makes a good journal and a good research manuscript.
- Understanding the advantages and shortcomings of key papers in the literature, and being able to write a critique of others' published research.
- Spending time in discussion and in reading to be able to understand techniques and methods in the field, and critically evaluate them.
- Gaining an understanding of the motivation and research that is conducted within climate change facilities at the Hawkesbury Institute for the Environment.
- Gaining fluency in the literature by practice, and learning the skill of good

AGEN 7001 Bushfire Behaviour

Credit Points 10

Legacy Code 200457

Coordinator Grahame Douglas ([https://directory.westernsydney.edu.au/search/name/Grahame Douglas/](https://directory.westernsydney.edu.au/search/name/Grahame%20Douglas/))

Description This unit describes the factors affecting bushfire behaviour and the models which are used to predict bushfire behaviour, the principles of fire ecology, and the assessment of bushfire hazards on property and the environment. Topics include the measurement of fuel, rates of spread and flame length equations, fire danger indices and landscape issues, topographical influences on fire behaviour, the importance of fire regimes and fire thresholds on flora and fauna, habitat and fire impacts on environmental services such as soils and water catchments. The role of fire behaviour in determining impacts on structures is also described.

School Eng, Design & Built Env

Discipline Agriculture, Environmental and Related Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

This subject assumes that the student has undertaken undergraduate study in building surveying, planning or related areas or has gained the equivalent building construction knowledge by working in the construction industry in an appropriate capacity for at least four years.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain the factors affecting bushfire behaviour;
2. Classify vegetation types and associated fuel structures;
3. Discuss the role of fire weather in developing fire indices;
4. Describe the impacts of bushfire on species and communities of environmental significance and their fire thresholds;
5. Describe the impacts of fire on the environment and environmental services and management strategies to protect these values;
6. Predict the intensity and flame characteristics of a bushfire; and
7. Apply available models to describe bushfire behaviour and its impact on structures.

Subject Content

Factors affecting various aspects of bushfire behaviour;
Initiation of bushfires;
Bushfire spread including spotting behaviour;
Comparative behaviour of bushfires in different vegetation types;
Ecological impacts of bushfires;
Models to describe bushfire behaviour;
Prediction of bushfire behaviour in terms of intensity and spread;
Prediction of bushfire behaviour on property.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Short Answer	1000w. Students must achieve at least 40% in this task to achieve an overall pass for the unit	20	N	Individual

Essay	2000w. Students must achieve at least 40% in this task to achieve an overall pass for the unit	25	N	Individual
Report	3000w. Students must achieve at least 40% in this task to achieve an overall pass for the unit	35	N	Individual
Essay	1,000 words	20	Y	Individual

AGEN 7002 Ecosystems in a Changing World

Credit Points 10

Legacy Code 800170

Coordinator Yolima Carrillo ([https://directory.westernsydney.edu.au/search/name/Yolima Carrillo/](https://directory.westernsydney.edu.au/search/name/Yolima%20Carrillo/))

Description Natural and managed ecosystems on our planet are experiencing a rapidly changing environment as a consequence of changing patterns of land and resource use, loss of biodiversity, altered atmospheric composition and anthropogenic climate change. This unit will introduce students to ecosystem concepts in the context of ecological and evolutionary responses to global change. Students will obtain practical experience in quantitative analysis of carbon, nutrient, water and energy budgets, and explore the consequences of global change for ecosystem services and biodiversity over a range of spatial and temporal scales. Teaching will be led by HIE staff with expertise in ecosystem responses to environmental change, soil microbial contributions to ecosystem function and the impacts of environmental change on plants, animals and their interactions.

School Graduate Research School

Discipline Agriculture, Environmental and Related Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

A Bachelor of Science in Biology, Environmental Science, or Agricultural Science, with some background in plant science and ecology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Quantitatively describe fundamental ecosystem functions
2. Solve problems mathematically on paper and in spreadsheets
3. Construct and interpret graphical representations of data
4. Apply systems approach to complex environmental issues
5. Critically discuss primary research articles on ecosystem responses to environmental change
6. Write critical evaluation of a primary research article

Subject Content

Ecosystem concepts, introduction to global change
 Geology and soils
 Water and energy balance
 Primary production and allocation
 Carbon cycling
 Nutrient cycling
 Microbial ecology and ecosystem processes
 Trophic dynamics; food webs and plant-animal interactions
 Biodiversity and ecosystem function
 Temporal dynamics: Disturbance, succession
 Scaling from plots to the globe; landscape processes
 Global change and ecosystems
 Ecosystem management in a changing world

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Mathematical 5 sets and graphical solutions to quantitative problems		50	N	Individual
Class participation and blog posts	4 x 250 words	20	N	Individual
Short answer quizzes	3 x 30 minutes	30	N	Individual

Prescribed Texts

AGEN 7004 Perspectives of Sustainable Development

Credit Points 10

Legacy Code 300397

Coordinator Richard Thomas ([https://directory.westernsydney.edu.au/search/name/Richard Thomas/](https://directory.westernsydney.edu.au/search/name/Richard+Thomas/))

Description This unit explores the philosophy, policies and practice of sustainable development. In exploring environmental philosophy the unit provides students with an understanding of the nature and emergence of both modern and post-modern paradigms that influence the direction and nature of current development policy. The nature of environmental policy is examined by developing an understanding of how values and attitudes shape a governing ethic about environmental management. The social, political, economic and ecological elements of sustainable development are unfolded to aid students understanding of what needs to be managed. Particular attention is given to those issues confronting developing countries as they move to become industrialised nations yet have high levels of poverty. Finally, the unit introduces the practice of environmental impact assessment as one management tool used in the management process.

School Science

Discipline Other Agriculture, Environmental And Related Studies

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 8266 - Environmental Management Core Studies 1 LGYB 8275 - Environmental Management

Restrictions

Students must be enrolled in the following programs: 3602 - Master of Environmental Management, 3605 - Master of Occupational Safety, Health and Environmental Management, 3606 - Graduate Diploma in Occupational Safety, Health and Environmental Management, 3607 - Graduate Certificate in Occupational Safety, Health and Environmental Management

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand the philosophy influencing current environmental management policy and practice.
2. Acquire knowledge of environmental values and worldviews and how they influence the policy development process.
3. Understand the political, social and ecological components of environmental management and their interaction in environmental management.

Subject Content

Definition of 'environment', 'management' and 'environmental management', 'sustainable development' and understanding of the need for effective management to address environmental issues. The history of environmental philosophy and the significance of epistemology in shaping policy. The way 'paradigms' and 'values' influence people's reaction to environmental issues. Contemporary concepts in environmental management (Ecologically Sustainable Development, environmental health, precautionary principle, stewardship, social capital and environmental justice).

The Social, Economic and Ecological Issues associated with Sustainable Development.

Teaching Periods

AGEN 7005 Research Protocol Design and Practice

Credit Points 10

Legacy Code 401080

Coordinator John Bidewell ([https://directory.westernsydney.edu.au/search/name/John Bidewell/](https://directory.westernsydney.edu.au/search/name/John%20Bidewell/))

Description In this unit postgraduate students develop a proposal for a research study in an area of interest, drawing upon their knowledge and experiences from other units in their program of study. Students learn how to apply research methods to a variety of research situations and questions; to understand how research questions are developed and answered empirically through suitable choice of research methodology, design and method; and how research findings are validated and communicated.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Equivalent Subjects AGEN 7003 - Methods of Researching

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop research objectives in a chosen area of interest based on a systematic assessment and synthesis of recent and relevant literature.
2. Devise a research plan to address research objectives, including selection of an appropriate study design, data source or data collection plan, sample, analytic strategy, and consideration of ethical implications of the research.
3. Construct a coherent and potentially fundable research protocol.

Subject Content

In this subject, students will be asked to re-visit content from previous units in their program of study and engage with various research paradigms in order to develop a research protocol based on their own research interest area. Unit content will include:

1. The research process
2. Formulating research objectives
3. Research design and causal inference
4. Data collection methods
5. Analytic strategy
6. Ethical issues in research

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task

AGRI 1003 Animal Science

Credit Points 10

Legacy Code 300801

Coordinator Adrian Renshaw ([https://directory.westernsydney.edu.au/search/name/Adrian Renshaw/](https://directory.westernsydney.edu.au/search/name/Adrian%20Renshaw/))

Description This unit will provide students with an understanding of comparative physiological and anatomical concepts of a range of mammalian and avian species. Students will develop the skills to apply these concepts in practical situations through the use of field observations and the relationship of these to functional anatomy and physiology of production animals. In addition students will develop many of the principles and concepts employed in animal production. Concepts discussed in lectures are reinforced by practical classes held in the laboratory and in the outdoor laboratories.

School Science

Discipline Animal Husbandry

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects AGRI 1002 - Animal Science

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define key terms and concepts associated with mammalian and avian production animal anatomy and physiology.
2. Compare anatomy and physiology of mammalian and avian production animals.
3. Evaluate animal production systems.
4. Handle production animal species; record observations and reflect on the behaviour of production animal species.

Subject Content

Physiology, anatomy and behavior of a range of animal species
Functional anatomy and physiology in practical context

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Online quizzes	up to 30 minutes in length	35	N	Individual
3 minute presentation and written report	3 minutes and 1,000 words	25	N	Individual
Lab report	500 words	15	N	Individual
Review article	2,000 words	25	N	Individual

AGRI 1004 Feeding the Planet

Credit Points 10

Legacy Code 300804

Coordinator Priti Krishna ([https://directory.westernsydney.edu.au/search/name/Priti Krishna/](https://directory.westernsydney.edu.au/search/name/Priti%20Krishna/))

Description This unit will explore the concepts driving current food production science (population growth, urbanization, emerging affluence, resource constraints, and underlying biological limits) in terms of their universal life cycles, constraints to production and societal issues. Throughout the unit, key questions will be addressed: What are the major health benefits and potential concerns regarding the intensification of production and consumption of food? How does agricultural production affect the efficient use of resources and impact our environment? Can costs of production be reduced to meet the growing demand for food products around the globe while maintaining health and safety for consumers? What are the different types of food production systems? Myths and misconceptions surrounding the food systems will be discussed and analysed. The unit is geared towards learners who seek a greater understanding of food systems and have a desire to learn more about issues surrounding sustainability.

AGRI 1005 Human Animal Interactions

Credit Points 10

Legacy Code 300807

Coordinator Sebastian Holmes ([https://directory.westernsydney.edu.au/search/name/Sebastian Holmes/](https://directory.westernsydney.edu.au/search/name/Sebastian%20Holmes/))

Description This unit introduces students to the varying relationships between humans and animals including domestication, the role of animals for companionship, as workers, the traditional role of animals in agriculture, wildlife and zoo animals and their increasingly recognised aesthetic and therapeutic roles. Students will work with a variety of domesticated animals, captive native mammals, and reptiles on-campus, and in a variety of animal industries off campus, including wildlife parks and zoos. The unit includes a balance of theoretical and practical work in the areas of behaviour and handling, basic husbandry, health care, and ethical management.

School Science

Discipline Animal Husbandry

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 1 subject

Incompatible Subjects AGRI 1006 - Introduction to Animal Science
AGRI 1007 - Human Animal Interactions

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the importance of animals and their uses in society in a global context.
2. Define concepts, terminology and definitions in animal science.
3. Describe the history of human-animal interactions.
4. Discuss animal domestication as a basis for many of the forms of human-animal contact through the role of animals in food and fibre production, nutrient recycling, research (biomedical, production, behaviour and other forms) and for pleasure, companionship and service).
5. Define the principles and ethics of animal exhibitions and public perceptions of animal use.
6. Demonstrate and describe safe handling of a range of animal species including domestic and non-domestic animals.
7. Observe basic animal behaviour, and interpret this behaviour in the context of production, recreation and service.
8. Report research findings using academic written and oral communication and develop intellectual autonomy.

Subject Content

1. Historical Perspectives: Animal attributes exploited by humans; Animal products and human nutrition; Animals and human development
2. Historical Perspectives: Hunter gatherers; Neolithic Revolution; Animals in religion, culture and mythology
3. Positive Interactions: Domestic agricultural animals
4. Positive Interactions: Working and entertainment
5. Positive Interactions: Companion animals
6. Positive Interactions: Animals in medicine and research
7. Human Animal Conflicts: Zoonosis and Allergies; Pests and Parasites
8. Human Animal Conflicts: Invasive and Introduced Species

9. Human Animal Conflicts: Impact of Agricultural Animals on the Environment
10. Human Animal Conflicts: Habitat Destruction and Human Wildlife Conflicts
11. Human Animal Conflicts: Managing Human Wildlife Conflicts for Coexistence
12. Human Animal Conflicts: Morality of Animal Extinctions in the Anthropocene

Assessment

AGRI 1009 Wildlife Studies

Credit Points 10

Legacy Code 300813

Coordinator Clarissa House ([https://directory.westernsydney.edu.au/search/name/Clarissa House/](https://directory.westernsydney.edu.au/search/name/Clarissa%20House/))

Description This unit involves the study of basic biology, ecology, conservation and management of selected wildlife. Students will learn different management systems and research methods used in the conservation and management of wildlife. The use of wildlife as a sustainable resource will also be analysed within the context of ecological sustainable development and animal ethics.

School Science

Discipline Animal Husbandry

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects AGRI 1008 - Introduction to Wildlife Studies

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define and identify wildlife, both taxonomically and in general terms.
2. Define wildlife population characteristics, population growth, carrying capacity, methods of estimation and other parameters.

3. Explain and articulate basic concepts, definitions and terms commonly used in wildlife studies and management.
4. Explain the methods used to identify animals (to a genus level).
5. Discuss the implications of invasive animals and the environment including feral species in Australia (based on cases studies) and current research in the field.
6. Discuss wildlife conservation and management, including habitat management, endangered wildlife species, international conservation organisations, the roles of zoos in animal conservation and related research.
7. Explain the methods which are used to monitor interactions between animals, animal populations and habitats.
8. Apply concepts and theories in wildlife studies including various management systems and research methods used in the study of animals, both in the wild and captivity.
9. Describe and discuss husbandry of a selected range of animals.
10. Conduct basic habitat and wildlife survey techniques including field transects, quadrats, animal tracks and scat identification.
11. Conduct a literature search on a wildlife studies topic and communicate findings in written form observing the conventions of scientific writing.

Subject Content

1. Wildlife population characteristics, population growth, carrying capacity, methods of estimation and other parameters.
2. Concepts, definitions and terms commonly used in wildlife studies and management.
3. Methods used to identify animals (to a genus level).
4. Invasive animals and the impact on the environment including feral species in Australia (based on cases studies) and current research in the field.
5. Conservation and management of exotic species at local, national and global scale, including management of habitats, endangered species, international conservation organisations and the roles of zoos in animal conservation.
6. Methods used to monitor interactions between animals, animal populations and habitats.
7. Management systems and research methods used in the study of animals, in the wild and captivity.
8. Habitat and wildlife survey techniques on campus including field transects, quadrats, animal tracks and scat identification.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Quiz	20 mcq, 30 min per quiz, a total of 120 minutes	20	N	Individual
Applied Project	5 slides/5 minutes each	20	N	Individual
Report	500 words	20	N	Individual

AGRI 1010 Protected Cropping Climate Control and Technology

Credit Points 10

Legacy Code 301263

Coordinator Lihua Li ([https://directory.westernsydney.edu.au/search/name/Lihua Li/](https://directory.westernsydney.edu.au/search/name/Lihua%20Li/))

Description This unit will teach students the intricacies of crop management in a highly controlled growing environment and the interplay between environmental response and plant behavior. In doing so, it will incorporate one nationally recognized unit of competency, "AHCPT503 - Manage a controlled growing environment". Students will also identify controlled environment technologies including those available, under-development and being researched, such as robotics, sensors and gene technologies. Students will gain an appreciation for the science and technology that drives high-tech greenhouse production and apply their skills in Western Sydney University's state of the art National Vegetable and Protected Cropping Centre (NVPC) and its PRIVA operating system at the Hawkesbury campus.

School Science

Discipline Agricultural Science

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Outline plant growth behaviour and measurements of crop performance
2. Explain why and how crops respond to environmental factors
3. Describe the greenhouse technologies available to growers that facilitate environmental control
4. Design a program which will optimise inputs for a specific crop in a controlled environment
5. Simulate the management of a controlled growing environment - (AHCPT503)
6. Report on future prospects and solutions for growing crops in managed environments

Subject Content

1. Understanding plant behaviour
2. Measuring crop performance
3. Crop response to environmental factors
4. Sensor technology
5. Radiation, temperature, coverings and supplemental lighting
6. Heating, cooling and dehumidifying
7. Vertical farm technology
8. Optimising inputs

9. Managing a controlled growing environment (AHCPT503)

10. Gene technology

11. Robotics

12. Identifying future prospects

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Portfolio	1,000 words or equivalent	20	N	Individual
Professional Task	1,500 words or equivalent	30	Y	Individual
Investigative Report	1,000 words or equivalent	30	N	Individual
Final Quiz	1 hour	20	N	Individual

Teaching Periods

AGRI 2001 Agronomy

Credit Points 10

Coordinator Samsul Huda ([https://directory.westernsydney.edu.au/search/name/Samsul Huda/](https://directory.westernsydney.edu.au/search/name/Samsul%20Huda/))

Description This unit enables students to develop understanding of basic crop and pasture agronomy including plant identification, crop/pasture establishment, growth, development, adaptation, plant protection, and grazing management. Students manage a crop in the field and a pot trial in the glasshouse and interact with researchers and industry professionals in understanding broad principles involved in the production and management of crops, pasture and animal production issues. The practical sessions enable students to apply the management principles and become familiar with various measuring techniques.

School Science

Discipline Agricultural Science

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects LGYA 6118 - Agronomy

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and explain the key concepts of pasture and crop agronomy
2. Recognise the major crop and pasture species in Australian agriculture
3. Manage crops in the field and glasshouse
4. Use equipment to measure plant growth and development
5. Calculate fertiliser needs for potential production
6. Estimate water requirements for improved crop growth and development
7. Relate grazing management issues to animal production

- Plan and design an experiment to determine the response of a crop to different levels of nutrient

Subject Content

- Physiology and adaptation of crop plants
- Plant nutrition
- Canopy structure - Photosynthesis and respiration
- Potential yield, soil - crop/pasture - water relations
- Plant protection - weeds - Competition and plant community relationships
- Grain development
- Grazing management
- Experimental design and data analysis

Teaching Periods

AGRI 2003 Animal Health and Welfare

Credit Points 10

Legacy Code 300834

Coordinator Julie Old ([https://directory.westernsydney.edu.au/search/name/Julie Old/](https://directory.westernsydney.edu.au/search/name/Julie%20Old/))

Description This unit will introduce students to the major issues related to animal health and welfare that form essential knowledge for those working with animals. In particular, students will gain an understanding of disease and methods for disease control as well as an introduction to disease diagnosis. In addition, students will gain knowledge about the relationships between animal management and the health and welfare expectations for domesticated and wild animals. The causes of common animal diseases will be introduced as well as the legal obligations of those owning, working or observing animals with respect to maintaining and monitoring their health and welfare.

School Science

Discipline Animal Husbandry

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 1001

Equivalent Subjects AGRI 2002 - Animal Health and Welfare

Learning Outcomes

On successful completion of this subject, students should be able to:

- Describe and group some common animal disease/parasite aetiologies
- Describe modes of disease transmission in animals
- Compare and discuss methods of disease control in animals
- Identify, define and assess levels of observed animal health in a range of species
- Perform, analyse and describe basic animal health parameters
- Conduct and describe some basic disease diagnosis techniques in the laboratory and field
- Discuss the relationship between animal management and animal health and welfare implications
- Define legal obligations for those working with animals

Subject Content

Common ectoparasites and endoparasites and their effects on the host
Non-pathogen-derived animal disease including nutritionally-derived
Pathogen-derived animal disease

Common livestock diseases

Common companion animal diseases

Wildlife disease

Disease prevention and control (includes vaccination and animal handling in the field)

Assessment of health in animals (includes in the laboratory and in the field)

The relationships between animal management and animal health and welfare implications

Animal welfare

Legislation and obligations of those working with research, industry, wildlife animal species

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Report: Written investigatory report on animal disease	2,000 words	20	N	Individual
Mid semester quiz	1 hour	30	N	Individual
Final Quiz	2 hours	50	N	Individual

Teaching Periods

AGRI 2004 Animal Reproduction

Credit Points 10

Legacy Code 300835

Coordinator Sebastian Holmes ([https://directory.westernsydney.edu.au/search/name/Sebastian Holmes/](https://directory.westernsydney.edu.au/search/name/Sebastian%20Holmes/))

Description Reproduction is the origin of life. The aim of this unit is to provide students with a sound understanding of reproduction of both domestic and non domestic animals so that they can design and manage a breeding program for a species of choice. Topics will include anatomy and physiology of male and female reproductive tracts; hormonal control of reproduction; fertilisation, pregnancy, parturition and lactation and advanced reproductive technologies. These topics will be explored in a range of species across different taxonomic groups.

School Science

Discipline Animal Husbandry

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects LGYB 3711 - Equine Reproduction and Stud Management AGRI 3006 - Animal Reproduction

Assumed Knowledge

Some knowledge of biology, including basic animal anatomy, introductory animal physiology and some understanding of reproductive behaviour.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe a range of reproductive strategies used by domesticated animals and wildlife species
2. Examine reproductive organs systems to determine advanced reproductive technologies to be applied to breeding systems
3. Compare and contrast the principles of manipulating breeding systems using biological and environmental stimuli
4. Analyse biological tissue in the laboratory to determine appearance of normal tissue
5. Report research findings using appropriate academic writing and public speaking

Subject Content

1. Anatomy of male and female reproductive tracts
2. Endocrinology of reproductive cycles
3. Oogenesis, fertilisation
4. Parturition and lactation
5. Pregnancy loss
6. Effect of environment on reproduction
7. Manipulation of reproductive cycles
8. Captive breeding programs
9. Artificial breeding techniques including semen collection and evaluation, embryo transfer and other assisted reproductive techniques
10. Major reproductive diseases and their control
11. Comparative structure and function of male and female reproductive systems, and learn how to manipulate endocrine control of reproductive cycles. Students will work with a range of techniques, including new and emerging technologies, for modifying reproductive performance.
12. Factors affecting reproduction and common causes of reproductive failure will also be explored. Research and write professional standard academic reports.

Special Requirements

Legislative pre-requisites

All activities in the subject involving live animals must be approved by the Western Sydney University Animal Care and Ethics Committee. All activities in the subject involving the use of animal specimens must be approved by the Western Sydney University Institutional Biosafety and Radiation Safety Committee.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Practical 1 write up - mini report	500-1000 words	10	N	Individual

Individual presentation: Managing an endangered or pest species through reproductive strategies	3 minutes	15	N	Individual
Practical 4 write up - major report	1500-2000 words	25	N	Individual
Written report: Managing an endangered or pest species through reproductive strategies	1500-3000 words	25	N	Individual
Final Exam	2 hours	25	N	Individual

AGRI 2005 Sustainable Food Production

Credit Points 10

Legacy Code 300791

Coordinator Richard Thomas ([https://directory.westernsydney.edu.au/search/name/Richard Thomas/](https://directory.westernsydney.edu.au/search/name/Richard%20Thomas/))

Description Sustainable Food Production provides students with the knowledge and skills required to analyse current and future food production systems with an emphasis on water and energy efficiency. The subject material integrates agronomic principles with food supply chain analysis. This approach facilitates an analytical framework that goes beyond farm-gate productivity by including aspects of the food supply chain. Key concepts include water use efficiency, nitrogen balance, energy balance, life cycle assessment, and greenhouse gas emissions. Case studies will be drawn from a range of food production systems, emphasising productivity per unit of input.

AGRI 2006 Agriculture, Food and Health

Credit Points 10

Legacy Code 301389

Coordinator Michelle Mak ([https://directory.westernsydney.edu.au/search/name/Michelle Mak/](https://directory.westernsydney.edu.au/search/name/Michelle%20Mak/))

Description This unit is designed to strengthen student understanding of the important interactions between food, agriculture, environment and health. Traditionally the topics of food, agriculture, environment and health have been taught mainly in isolation from each other. It is becoming increasingly apparent that this traditional approach bears little relevance to real world issues and in some cases acts as an impediment to progress. Alternatives to the current 'western industrialised' food production system will be explored. These include organic agriculture, local farmer markets, and consumer driven changes to food production systems.

School Science

Discipline Agriculture, Not Elsewhere Classified.

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 2 subject

Incompatible Subjects LGYA 6185 - Ecology of Production

Assumed Knowledge

Basic understanding of resource sustainability issues.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the impacts of food choices on personal health.
2. Analyse the impacts of food choices on the environment.
3. Analyse impacts of food choices on the businesses and communities that provide food services.
4. Apply conceptual models to the analysis of food supply chains.
5. Critically evaluate current and future food supply systems.

Subject Content

Influence of current food production systems on the 'western' diet.
Current public health issues and their link to diet.

Influence of diet on food production systems.

Impact of diet on the environment.

Analysis of the distribution of food costs along the food supply chain

Concept of ethical eating

Concept of sustainable diets

AGRI 3001 Analysis of Agricultural Supply and Demand

Credit Points 10

Legacy Code 301098

Coordinator Richard Thomas ([https://directory.westernsydney.edu.au/search/name/Richard Thomas/](https://directory.westernsydney.edu.au/search/name/Richard%20Thomas/))

Description Students will develop understanding of the integrated nature of the agri-food value chain (supply and demand) from economic, environmental and social perspectives. Integrative processes and tools from established value chains will be evaluated in the context of changing consumer sentiment. Through analysis of economic and environmental gains (e.g. water and energy savings), students will identify emerging opportunities and challenges for improved and/or alternative food distribution systems. Analytical and reporting tools will be used to develop competence in data management, with emphasis on increasing communication from consumer to producer.

School Science

Discipline Agriculture, Not Elsewhere Classified.

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 6131 - Analysis of Agricultural Supply Chains

Assumed Knowledge

Students enrolling in this subject should have an understanding of basic statistics and a fundamental understanding of the consumer-driven nature of the economy. This subject will build on aspects of agri-food supply chains introduced in earlier subjects in the Bachelor of Sustainable Agriculture and Food Security program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply appropriate research methodology and analyse quantitative and qualitative results
2. Apply data management principles to the understanding and improvement of agricultural value chains (supply and demand)
3. Evaluate the influence of consumer behaviours on agricultural value chains
4. Critique, integrate and communicate information to develop effective and innovative agricultural value chains
5. Critically analyse the social, economic and environmental risks and benefits of improved agricultural value chains.

Subject Content

1. Quantitative and qualitative tools for industry analysis
2. Knowledge and data management across the value chain (supply and demand)
3. Impact of consumer trends and attitudes on agricultural supply and demand
4. Definitions and determinants of success in agricultural value chains
5. Risk assessment and comparative analysis of benefits from improved agricultural value chains
6. Data management in terms of information, energy, water and service metrics
7. Supply chains as a framework for analysis of environmental and social outcomes

Assessment

AGRI 3002 Animal Nutrition and Feeding

Credit Points 10

Legacy Code 300853

Coordinator Ben Moore ([https://directory.westernsydney.edu.au/search/name/Ben Moore/](https://directory.westernsydney.edu.au/search/name/Ben%20Moore/))

Description Animal nutrition and feeding is fundamental to many aspects of animal production and wildlife systems. This unit aims to provide students with knowledge of nutrient requirements for different types of animals and the nutrient composition of common feeds. Students will evaluate and formulate rations to meet a range of animal requirements at different stages of growth, reproduction, lactation and production.

School Science

Discipline Animal Husbandry

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects AGRI 3003 - Animal Nutrition and Feeding

Restrictions Successful completion of 60 credit points.

Assumed Knowledge

A basic understanding of animals and biology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the nutrient requirements of different types of animals at different stages of the life cycle
2. Articulate the effect of different types of digestive systems on feed and nutrient requirements
3. Analyse nutrient composition of common feeds for a range of animal species
4. Describe the factors affecting feed intake
5. Formulate and evaluate rations and supplements for a range of different animal species
6. Identify nutrient deficiencies, excesses and imbalances
7. Conduct and interpret laboratory analysis of feedstuffs
8. Describe common feeding related problems
9. Research and write professional reports

Subject Content

Nutrients - carbohydrates, lipids, protein, minerals, vitamins and water
 Nutrient requirements of different animal species at different stages of the life cycle
 Regulation of feed intake such as hormones, BMR and palatability
 Nutrient composition of common feeds, pastures and specialised feeds
 Rations formulation for different animal species at different stages of the life cycle
 Common feed and nutrition related problems
 Interpreting feed and supplement labels
 Special requirements of animals including performance animal, wild and zoo animal nutrition
 Recent advances in nutrition
 Research and write professional reports

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Quiz	1 hour per quiz (conducted online, in own time over 1 week period)	20	N	Individual
Proposal	15 minutes	10	N	Group
Report	2,000 words	20	N	Individual
Presentation	20 minutes	50	N	Group

Prescribed Texts

AGRI 3005 Animal Production

Credit Points 10

Legacy Code 300854

Coordinator Adrian Renshaw ([https://directory.westernsydney.edu.au/search/name/Adrian Renshaw/](https://directory.westernsydney.edu.au/search/name/Adrian%20Renshaw/))

Description Animal production is about producing animals for food, companionship and conservation. This unit aims to develop an understanding of the major animal production systems used for food and fibre and other resources in Australia (intensive and wildlife), and to apply this knowledge to improving problematic issues and understanding topical issues. Topics will focus on the application of animal production principles to these production systems.

School Science

Discipline Agricultural Science

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects AGRI 3004 - Animal Production

Restrictions Successful completion of 120 credit points of Bachelor of Natural Science or Bachelor of Science subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define, describe and demonstrate a depth of knowledge various animal production systems in Australia.
2. Model animal production systems demonstrating flows of activities and resources, demonstrating how inputs and activities can be manipulated to modify production outputs.
3. Demonstrate how domestic and international animal production systems function in relation to food quality, food safety and food supply.
4. Describe how intensive and extensive animal production systems differ in relation to relative productivity, geographic location and environmental impact.
5. Explain how animal production systems fit within a framework of bioethics, animal welfare, animal rights and biotechnology.
6. Describe how animal production concepts and principles can be applied to the management of wildlife and other natural systems.
7. Demonstrate knowledge of new technologies, innovations, processes and current issues in animal production.
8. Demonstrate the ability to mount a coherent argument with respect to key topical issues related to animal production systems in relation to social, environmental and production outputs and the ability to outline those arguments in both spoken and written formats.

Subject Content

Range of animal production systems and the various outputs and outcomes that result from those systems.

Intensive Animal Production.

Genetic Engineering.

Deer Production.

Wildlife Harvesting.

Wildlife Production Systems.

An international example - case study.

Topical areas in Animal Production.

Special Requirements

Legislative pre-requisites

Students who opt to enrol in this subject are strongly recommended to obtain a Q-Fever vaccination, and Tetanus vaccination/booster. Students who cannot evidence vaccination may be precluded from activities on the Farm, and/or internships with third parties.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Quiz	1 hour	40	N	Individual
Debate	5 min and 500 words of notes	20	N	Individual
Report	4,000 words	40	N	Individual

AGRI 3007 Water in the Landscape

Credit Points 10

Legacy Code 300870

Coordinator Basant Maheshwari ([https://directory.westernsydney.edu.au/search/name/Basant Maheshwari/](https://directory.westernsydney.edu.au/search/name/Basant%20Maheshwari/))

Description Many land and water use activities in both urban and rural landscape result in hydrologic changes that have environmental, economic and social consequences. These activities require appropriate management strategies for sustainable water use in catchment. In this unit, the hydrologic cycle will be explored at varying spatial scales in urban and rural contexts. Hydrologic, environmental, economic and social perspectives will be used in the examination of the demand and the use of water.

School Science

Discipline Agricultural Science

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 6246 - Water in the Landscape

Restrictions Successful completion of 120 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Synthesise and evaluate different concepts and approaches to sound water management in the context of urban and rural catchments
2. Analyse and evaluate the nature of demands for water in different landscapes and for different users and the difficulties in matching supply and demand
3. Assess different sources of water and uses and analyse the issues related to rainwater harvesting, water conservation and recycling
4. Describe how human activities affect the water quality and health of waterways; and differentiate the impacts of factors such as population pressure and climate change on the availability of water for different uses
5. Research selected water issue through working on a mini project
6. Use social, cultural, economic, policy and institutional perspectives to relate sustainable water supply with demand

Subject Content

1. Water issues and hydrologic cycle
2. Issues relating to water in the environment. Quantity and quality of groundwater and surface water supplies
3. Urban and Rural Irrigation
4. Evaporation and transpiration
5. Salinity, drought and other environmental issues
6. Water management in urban and peri-urban landscape
7. Social, economic and policy aspects of water management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Report	1000 words and video (5-7 min)	15	N	Individual
Presentation	15 mins	20	N	Individual
Quiz	1 hour	30	N	Individual
Report	3500 words	35	N	Individual

AGRI 3008 Animal Health, Ethics and Welfare

Credit Points 10

Legacy Code 301255

Coordinator Mark Jones ([https://directory.westernsydney.edu.au/search/name/Mark Jones/](https://directory.westernsydney.edu.au/search/name/Mark%20Jones/))

Description This unit will ensure students will be able to evaluate the major issues related to animal health, welfare and ethical frameworks that govern working with animals. In particular, students will gain knowledge of the diseases impacting animals and methods for disease diagnosis and control. In addition, students will apply this knowledge to the relationships between animal management and the health and welfare expectations for domesticated and wild animals. The legal obligations of the impact of legislative regulation for those owning, working or observing animals with respect to approval processes, maintaining and monitoring animal health and welfare is also addressed. Students may need to travel to another campus to complete this unit.

School Science

Discipline Animal Husbandry

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 1001 AND AGRI 1003

Incompatible Subjects AGRI 2002 Animal Health and Welfare
AGRI 2003 Animal Health and Welfare

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and categorise some common animal disease/parasite aetiologies
2. Distinguish between different modes of disease transmission in animals
3. Compare and contrast methods of disease control in animals
4. Identify, define and assess levels of observed animal health in a range of species
5. Perform, analyse and describe basic animal health parameters
6. Conduct, assess and describe some basic disease diagnosis techniques in the laboratory and field
7. Evaluate the relationship between animal management and animal health and welfare implications
8. Assess and select the legal obligations for those working with animals

Subject Content

- Common ectoparasites and endoparasites and their effects on the host
- Non-pathogen-derived animal disease
- Pathogen-derived animal disease
- Livestock disease
- Companion animal disease
- Wildlife disease
- Disease prevention and control
- Assessment of health in animals

- The relationships between animal management and animal health and welfare implications
- Animal welfare
- Legislation and obligations of those working with research, industry, wildlife animal species

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Report: Viva	15 minutes	20	N	Individual
Quizzes (3)	15 minutes	30	N	Individual
Final Exam	1 hours	30	N	Individual
Written report to support Viva	500 words	20	N	Individual

Teaching Periods

AGRI 3009 Agricultural Technology

Credit Points 10

Legacy Code 301449

Coordinator Ryan Mcquinn ([https://directory.westernsydney.edu.au/search/name/Ryan Mcquinn/](https://directory.westernsydney.edu.au/search/name/Ryan%20Mcquinn/))

Description Agricultural Biotechnology is rapidly developing and this unit will assure you the knowledge and skills that contribute to the future of sustainable food production. The subject material integrates agronomic principles with current and emerging biotechnology, highlighting issues and solutions based around case studies. This approach facilitates an analytical framework that goes beyond traditional production systems including eco-farming, life-cycle and regenerative agriculture, along with development of innovative and integrated production and waste systems. Key concepts include sustainable resource use, nitrogen balance, energy efficiency, and greenhouse gas emissions and market analysis.

School Science

Discipline Agriculture

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 3 subject

Restrictions Must have completed 100 credit points of subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the key determinants of biotechnology in agricultural production systems.
2. Critically evaluate the impact of biotechnology on sustainable food production systems.
3. Articulate the pathways to incorporate biotechnology into agriculture.
4. Analyse the role of technology in regenerative and sustainable agriculture systems.
5. Apply analytical principles to develop emerging agriculture enterprises.

Subject Content

1. New and emerging biotechnology in agriculture.
2. Sustainable food production systems.
3. Biotechnology in eco-farming, lifecycle and regenerative agriculture.
4. Innovation pathways in plant and animal production.
5. Technology applications in regenerative and sustainable agricultural production.
6. Systems and market analysis of emerging Agrifood enterprises.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
AgBiotech Analysis	3 x 15 minutes	30	N	Individual
Review	2x 1000 words	40	N	Individual
Agrifood Proposal	3000 words	30	N	Individual

AGRI 7001 Agricultural Biosecurity

Credit Points 10

Legacy Code 301368

Coordinator Jonathan Plett ([https://directory.westernsydney.edu.au/search/name/Jonathan Plett/](https://directory.westernsydney.edu.au/search/name/Jonathan%20Plett/))

Description Biosecurity is a set of measures to prevent, respond to and recover crops and livestock from pests and diseases that threaten the economy and environment. Comprehensive biosecurity systems help ensure food security and food safety, which is crucial for community health, competitiveness for agricultural export and conservation of natural environments. This unit studies the epidemiologic triangle consisting of the host, disease and the environment in which the disease develops, and the series of measures and practices to detect and prevent entry and spread of pests, diseases and weeds. The potential for future biosecurity mega shocks to the agricultural industry, preparedness for rapid emergency responses to an exotic incursion, and management of invasion of pests and diseases will be discussed.

School Science

Discipline Agricultural Science

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

Foundation in chemical and biological sciences, quantitative thinking.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically appraise biosecurity systems as applied to global food security.
2. Identify diseases, pests and weeds that are the target of surveillance.
3. Monitor plants and animals for signs of disease and pest infestation.
4. Devise a biosecurity plan that is tailored to the needs of a specific area.
5. Create solutions to dynamic complex problems in biosecurity by synthesizing information from a range of relevant data sources.
6. Justify inferences and solutions to biosecurity issues to a range of audiences.

Subject Content

1. How farms and farm products are affected by microbes (diazotrophs, mycorrhizae, viruses, bacteria, fungi and nematodes), pests and weeds
2. Key concepts of epidemiology; the study of the distribution (frequency, pattern) and determinants (causes, risk factors) of disease-related states and events
3. Methods for diagnosis such as quantitative PCR as well as different sequencing and sensor technologies
4. The symbiotic relationships of microorganisms and insects with plants and animals and their use in biocontrol
5. Methods of control (cultural, chemical, biological, and genetics to breed resistant varieties) and their relative advantages and disadvantages,
6. Data modelling and visualisation together with increased data availability for long-term decision making
7. The relevant legislation and authorities (Biosecurity Australia, AQIS, TGA etc.).
8. The strengths and weaknesses of current biosecurity systems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Professional task	500 words	10	N	Individual
Professional task	3,000 words	40	N	Individual
Presentation	15 minutes	20	N	Individual
Log/ workbook	2,500 words	30	N	Individual

AGRI 7002 Agricultural Biotechnology

Credit Points 10

Legacy Code 301369

Coordinator Robert Sharwood ([https://directory.westernsydney.edu.au/search/name/Robert Sharwood/](https://directory.westernsydney.edu.au/search/name/Robert_Sharwood/))

Description Biotechnology is a powerful enabling technology that is revolutionising agriculture by delivering improved productivity and nutrition, better management of pests and diseases, improved ability to cope with environmental challenges, and development and production of medicines and functional products. The discovery and applications of gene editing by CRISPR-Cas technology as well as modification of organisms using recombinant DNA, RNAi and other molecular technologies are seen as key to providing solutions to global food crisis, climate change associated disasters and health and disease-related issues. This unit focuses on modern and cutting-edge techniques used in cell culture and tissue engineering, genome editing, transformation and transgenesis, rapid breeding and selection and synthetic biology to address contemporary issues in sustainable agriculture.

School Science

Discipline Agricultural Science

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically appraise the essential principles, technologies, and applications of biotechnology as applied to sustainable agriculture.
2. Distinguish the advantages and disadvantages of using biotechnology in agriculture.
3. Interpret the national and international regulatory framework of agricultural biotechnology.
4. Justify inferences and solutions to the data collected in response experiments in a professional context.
5. Communicate scientific advances in biotechnology to diverse audiences.

Subject Content

1. History of agricultural biotechnology.
2. New technologies in organism modification (CRISPR-Cas, RNAi, Epigenetic marks).
3. Applications of biotechnology for improved yield and nutritional qualities of food crop.
4. Resistance to pest and pathogens.
5. Reduced dependence on agrochemicals, production of vaccines.
6. Faster breeding and selection of crops improved traits.
7. Advances in stem cell research such as development of organoid systems, plant derived scaffolds for tissue engineering.
8. Biotechnology policies and regulation.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Case Study	2,000 words	25	N	Individual
Quiz	1 hour	10	N	Individual
Simulation	10 minutes	15	N	Individual
Quiz	1 hour	10	N	Individual
Quiz	1 hour	10	N	Individual

AGRI 7003 Agricultural Technologies

Credit Points 10

Legacy Code 301370

Coordinator Richard Thomas ([https://directory.westernsydney.edu.au/search/name/Richard Thomas/](https://directory.westernsydney.edu.au/search/name/Richard%20Thomas/))

Description This unit will provide students with knowledge and practical experience of new technologies associated with broad-acre and intensive cropping and pastures, and their role in mixed farming systems. A major focus of this unit is how new technologies such as drones, machine learning, remote sensing and imaging science technologies are contributing to more productive and sustainable land management systems. The advanced agronomy component of the unit will explore keys to successful crop and pasture management - recognising variability in performance within the paddock and farm, diagnosing the underlying causes of spatial and temporal variability, and using precision agriculture tools to produce better informed enterprise management decisions, plant yield, sustainability and quality for end-users.

School Science

Discipline Agricultural Science

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appraise how precision agriculture technology can be used to optimise crop growth and yields and resource-use efficiency.
2. Propose solutions to dynamic complex problems in agriculture using appropriate analytical methods from data science.
3. Create potential management zones based on assessment of authentic soil and crop data.
4. Formulate informed cropping decisions based on data from rate response experiments and crop modelling in precision agriculture.

5. Justify inferences and conclusions to the data collected in experiments in a professional context.

Subject Content

1. Modern approaches to crop improvement through genetic technologies
2. Developing balanced arguments on the merits and ethics of genetic technologies
3. Advanced agronomic systems, and understand the relationships between genotype, management and environment
4. New crop management techniques
5. Precision agriculture approaches and technologies
6. Crop biodynamic models and their application, and decision support systems
7. The impacts of possible changes in CO₂, temperature and rainfall distribution on crop growth and yield at farm and regional scales
8. Options for future farming systems which integrate knowledge on crop, pasture and livestock improvement
9. Advanced agronomy with likely scenarios for climate variability and change

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task

AGRI 7004 Livestock Production Systems

Credit Points 10

Legacy Code 301373

Coordinator Adrian Renshaw ([https://directory.westernsydney.edu.au/search/name/Adrian Renshaw/](https://directory.westernsydney.edu.au/search/name/Adrian%20Renshaw/))

Description This unit covers the principles of animal production required to develop sustainable and efficient production systems to meet the challenges of domestic and global needs. It will cover the scientific principles (biochemical, anatomical and physiological) that underpin intensive and extensive animal production. These principles will be related to key production parameters and indicators including growth, reproduction, lactation and milk production, fibre

production and breeding. Students will apply scientific principles to the planning of production in farming simulation models. Through these simulation programs students will explore production case studies and develop advisory plans. Focus areas include animal health and management, whole farm production systems and the challenges to animal production from changing climate, food safety and quality, consumer requirements and animal welfare.

School Science

Discipline Animal Husbandry

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an integrative understanding of the principles of clean, green and ethical animal production and its importance to modern agriculture.
2. Critically analyse the major problems associated with the production of wool, meat and dairy products.
3. Apply appropriate research informed techniques in interpreting data to support decisions in animal production.
4. Communicate the conclusions of an animal production report to key stake holders.
5. Address complex ethical issues in animal production in line with regulatory frameworks.

Subject Content

1. The structure and operation of agricultural production industries of Australia
2. Australia's role in global food and fibre production
3. The principal factors that determine location, environmental impact, sustainability, profitability and international trade competitiveness in animal production systems
4. The major extensive animal production systems in Australia: beef cattle and sheep, and dairy cattle
5. The major intensive animal production systems in Australia: pigs and poultry, including free range and conventional farming systems
6. Productivity benchmarks in the major production animal systems
7. Chain of production from on-farm to consumer
8. The principles of codes of practice and laws governing production animal systems
9. The principles of animal welfare and situations where there is a particular welfare concern
10. Impact of animal production systems on the environment

Special Requirements

Legislative pre-requisites

Students who opt to enrol in this subject are strongly recommended to obtain a Q-Fever vaccination, and Tetanus vaccination/booster. Students who cannot evidence vaccination may be precluded from activities on the Farm, and/or internships with third parties.

Description Applied Clinical Science 3 commences the third clinical year of the MD program. You will further extend the knowledge and skills gained in previous units by being immersed in clinical and community placements, and advance your professional competencies in this final year, towards graduation. Placements include Medicine, Surgery, General Practice, Aboriginal Health and Critical Care rotations in a wide range of hospitals and community based services and organisations in Greater Western Sydney, Bathurst and Lismore. Learning and assessment requirements do not differ across sites. This experiential learning is supported by campus, clinical school and online activities, including seminars, workshops and modules to prepare you for clinical practice as a graduate doctor.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 40cp

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities

3. Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

The major specialties and subspecialties of Medicine, Surgery, General Practice, Aboriginal Health and Critical Care are covered in Applied Clinical Sciences 3 through a combination of clinical and community based placements, campus and clinical school lectures, workshops and tutorials. Topics covered in these specialties include the following

1. Patient care
 - Diagnosis and investigation of problems and presentations in general medicine, surgery, general practice, Aboriginal health and Critical care
 - formulation and implementation (under supervision) of patient centred management plans
 - prescribing medications and other therapeutic agents
 - application and evaluation of clinical and procedural skills
2. Health in the Community
 - health care systems and services
 - Advocacy for disease prevention and health promotion
3. Scientific Basis of Medicine
 - appraisal, application and evaluation of evidence to clinical problems
 - application of The biomedical, psychological and social sciences to medical and health problems and presentations
 - conducting research
4. Professional and Personal Development
 - Ethical practice
 - multidisciplinary teamwork and communication
 - learning and Teaching in clinical environments
 - safety and quality in clinical settings

Coordinator Don Mason ([https://directory.westernsydney.edu.au/search/name/Don Mason/](https://directory.westernsydney.edu.au/search/name/Don%20Mason/))

Description This unit is designed to provide students with the knowledge and skills necessary to develop elementary design skills and basic CAD (Computer Aided Design) proficiency suitable for application within the building industry. Students will learn to describe building designs in plan, section, elevation, isometric and perspective views. Basic drafting concepts and skills will be acquired in the context of individual detached housing designs. Students will also be required to develop appropriate analytical and problem solving skills in dealing with a realistic house building project.

School Eng, Design & Built Env

Level Undergraduate Level 1 subject

Equivalent Subjects ARCH 1003 Graphic Communication and Design (WSTC)

ARCH 1001 Graphic Communication and Design

ARCH 1005 Drawing and CAD (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply architectural and technical drafting standards and symbols.
2. Generate ideas, designs and 3D models for sustainable housing.
3. Differentiate and correctly interpret site plans, survey plans, floor plans, cross sections, elevations and roof plans.
4. Produce the required documentation for a standard three bedroom house using a CAD program.

Subject Content

1. Sketching basic house designs
2. Drawing types - Plans, elevations and sections
3. Passive solar design principles
4. Efficient floor plan layouts
5. Finishes selection
6. CAD skills
7. Construction drawing essentials

8. Bathroom layouts

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Applied Project	Two A3-sized sheets, hand-drawn, 1:100 scale sketches of the floor plan and two main elevations. Fully annotated to describe the design concept	40	N	Individual
Applied Project	Minimum 5 x A3 sheets of CAD construction drawings: Rendered 3D view; Site plan; Floor plan; and some Elevations	20	N	Individual
Applied Project	Minimum 5 x A3 sheets of CAD construction drawings: Rendered 3D view; Site plan; Floor plan; 4 Elevations; and 2 Sections.	40	N	Individual

ARCH 2001 Architecture Studio - Fundamentals of Analogue Design

Credit Points 20

Legacy Code 301197

Coordinator Ursa Komac ([https://directory.westernsydney.edu.au/search/name/Ursa Komac/](https://directory.westernsydney.edu.au/search/name/Ursa%20Komac/))

Description This unit will introduce students to fundamentals of spatial composition as it relates to visual and temporal experience in architectural contexts. Project-based assessments will involve the creation of 2D and 3D compositions that explore traditional organisational strategies, classical principles of geometry, materiality, experiential phenomena, and representation. Students will work with analogue and traditional tools including freehand drawing and conventional shop equipment. The unit will also provide an introduction to the history, theory, and discourse of architecture from 4000BC to the Enlightenment.

School Eng, Design & Built Env

Discipline Architecture

Student Contribution Band HECS Band 2 20cp

Level Undergraduate Level 2 subject

Restrictions Must be enrolled in 3753 Bachelor of Architectural Design or 3768 Postgraduate Bridging Program (Architecture). Students not enrolled in 3753 or 3768 who wish to enrol into this subject should have a 5.0 minimum GPA and are required to discuss with the Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Establish a basic foundation of visual, spatial, and material literacy through iterative studio-based explorations in 2D and 3D composition, aesthetics, and abstraction that relate to human ergonomic scale, functionality, user experience, and context.
2. Develop abilities for inquiry, organization, comparison of information, editing, diagramming, critical observation and reflection in support of design investigations.
3. Design and develop proposals through freehand and mechanical drawing techniques, physical model making, verbal and written communication, including ability to form a persuasive and coherent rationale for one's work.
4. Interpret, analyse, and critique important themes from the history and theory of the architecture discipline; including from an Australian, European and Global context of architectural de

Subject Content

1. Fundamentals of Spatial and Architectural design
2. Architectural history and theory ? Ancient to Enlightenment

3. Architectural communication skills using freehand and orthographic techniques
4. Ergonomics, scale, and proportioning systems
5. 2D and 3D composition of form
6. Design through using conventional workshop techniques

Special Requirements

Legislative pre-requisites

ARCH 3002 Architecture Studio - Global Cities

Credit Points 20

Legacy Code 301201

Coordinator Paul Sanders ([https://directory.westernsydney.edu.au/search/name/Paul Sanders/](https://directory.westernsydney.edu.au/search/name/Paul%20Sanders/))

Description This unit will situate learning in the context of the Global City. Projects will be used to investigate scenarios that are common to the contemporary condition of the developing world and the expanding metropolis in various international contexts. Students will either travel to international sites, work with international partners, or work remotely on problems beyond the Australian context. Work integrated learning will be a key feature of the Global Cities studio and will involve relevant members of the professional community to help lead studio investigations. Assessments will include complex urban projects at a

large scale, developed using the design, communications, technical, and theoretical studies that have underpinned their education. Assessments will be project-based in real world scenarios and will incorporate sustainable strategies of design. Studies will be supplemented by tuition in structural design and will also be informed by concurrent studies in building science.

School Eng, Design & Built Env

Discipline Architecture

Student Contribution Band HECS Band 2 20cp

Level Undergraduate Level 3 subject

Pre-requisite(s) ARCH 3004 AND ARCH 3003

Restrictions Students must be enrolled in 3753 Bachelor of Architectural Design. Students not enrolled in 3753 who wish to enrol into this subject should have a 5.0 minimum GPA and are required to discuss with the Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply creative design skills to address urban complexity, diverse combinations of architectural programs, and large-scale buildings.
2. Demonstrate an advanced level of theoretical and technical awareness in architectural and spatial design with an ability to develop and test a variety of sensitive design solutions in section, plan and model using hand and digital techniques.
3. Develop and demonstrate an awareness of the broader cultural context in which architecture is practised, through the application of local and global planning considerations, and an understanding of the history of practice of urban design and issues of city planning
4. Develop an understanding of fundamental performance-based aspects of building design, including structural principles, daylight/lighting level analysis, thermal analysis, ventilation and acoustic analysis, where the evaluation of data justifies built form, and/or a specific set of characteristics which modulate how buildings are both built and experienced.
5. Develop an understanding and ability to design appropriate structural solutions and construction strategies for different building types and spatial requirements, with consideration for assembly and cost.
6. Implement technical skills in analysis and representation of structural design.

Subject Content

1. Investigation of Urban Spatial and Architectural design scenarios
2. Fundamentals of architectural building structures
3. Analysis of context and precedent to inform design decisions
4. Organisation of architectural programs and material assemblies in large-scale buildings or large-scale complex urban environments/scenarios
5. Graphic visualisation and literacy
6. Performance based design solutions in response to daylight, acoustics, thermal performance and other aspects of building science

Special Requirements

Legislative pre-requisites

Construction Site Induction Safety "White Card" – must be obtained in Year 1 of the program.

Assessment

ARCH 3003 Architecture Studio - Rethinking Urbanism

Credit Points 20

Legacy Code 301200

Coordinator Aso Haji Rasouli ([https://directory.westernsydney.edu.au/search/name/Aso Haji Rasouli/](https://directory.westernsydney.edu.au/search/name/Aso%20Haji%20Rasouli/))

Description This unit will extend the concept of Urban Transformation, where the architect is an agent of progress and change in the built environment. Students will refine their use of architectural design as a medium for speculation and advocacy in the public realm and in daily life of the city. Rethinking Urbanism will investigate architecture and civic space at the scale of public projects. Students will use various models of three-dimensional representation for communication and experimentation with new ways of building the urban fabric. Assessments will be project-based in real world scenarios and will incorporate sustainable strategies of design.

School Eng, Design & Built Env

Discipline Architecture

Student Contribution Band HECS Band 2 20cp

Level Undergraduate Level 3 subject

Pre-requisite(s) ARCH 2001 AND ARCH 2002

Restrictions Students must be enrolled in 3753 Bachelor of Architectural Design. Students not enrolled in 3753 who wish to enrol into this subject should have a 5.0 minimum GPA and are required to discuss with the Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply creative design skills and well-considered formal responses to intermediate level architectural scenarios, particularly in relation to a contested urban context.
2. Evaluate and design mid-rise structural and construction systems and their resulting material and organisational implications, in particular in the building section and plan, demonstrated through iterative testing of design options.
3. Investigate the multiple and competing factors which influence how urban environments, building morphology, and civic social contexts are constructed and transformed.
4. Exercise a basic understanding of the relevant codes and standards, the building project cycle, and of the various methods of building procurement.
5. Evaluate and design architectural and material assemblies through the management of data utilising parametric modelling software and/or scripting.
6. Evaluate and design architectural and material assemblies through three-dimensional modelling and both physical and digital representation.

Subject Content

1. Investigation of Urban Spatial and Architectural design scenarios
2. Architectural Technologies
3. Analysis of context and precedent to inform design decisions
4. Organisation of architectural programs and material assemblies in medium-scale buildings
5. Graphic visualisation and literacy
6. Using construction and material to express architectural ideas

Special Requirements

Legislative pre-requisites

Restrictions Students must be enrolled in 3753 Bachelor of Architectural Design. Students not enrolled in 3753 who wish to enrol into this subject should have a 5.0 minimum GPA and are required to discuss with the Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design with an awareness and understanding of the material world in architecture, and how technological and environmental design involve the resourcing, configuration, and deployment of material in a variety of contexts.
2. Research, evaluate, and apply climatically responsive design technologies.

3. Apply the use conceptual thinking, analysis, precedent to inform design proposals in response to basic architectural programs, particularly in relation to an suburban context.
4. Integrate technical awareness in relation to basic structural and construction systems and their resulting material and organisational implications.
5. Proficiently use BIM software to effectively explore and represent architectural space and materials through modelling, rendering, and texturing.
6. Use BIM software to document and organise instructions for building assembly and for presentation of architectural ideas.

Subject Content

1. Investigation of Suburban Spatial and Architectural design scenarios
2. Building Information Modelling (BIM)
3. Sustainable design techniques and strategies
4. Organisation of architectural programs and material assemblies
5. Graphic visualisation and literacy
6. Composition of spatial and material forms

Special Requirements

ARCH 3005 Architecture Studio - The Infrastructural

Credit Points 20

Legacy Code 301202

Coordinator Paul Sanders ([https://directory.westernsydney.edu.au/search/name/Paul Sanders/](https://directory.westernsydney.edu.au/search/name/Paul%20Sanders/))

Description This unit situates learning in the context of the major urban public projects that sit at the intersection of architecture, infrastructure, and urban design and which highlight the pressure of population growth, climate change, or other significant demographic, economic, political, or ecological transformations. Work integrated learning is a key feature of the Rethinking Infrastructure studio which involve relevant members of the professional community to help lead studio investigations and/or embed students in professional practices. Projects include architectural responses to complex urban and infrastructural projects at a large scale such as transit oriented development, high density housing, landscape urbanism. Students develop professional practice skills on these real world projects and incorporate sustainable strategies of design as well as learning skills in advocacy, entrepreneurship, and professional readiness.

School Eng, Design & Built Env

Discipline Architecture

Student Contribution Band HECS Band 2 20cp

Level Undergraduate Level 3 subject

Pre-requisite(s) ARCH 3004 OR ARCH 3003

Restrictions Students must be enrolled in 3753 Bachelor of Architectural Design. Students not enrolled in 3753 who wish to enrol into this subject should have a 5.0 minimum GPA and are required to discuss with the Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse and evaluate cities and urban form, morphology, systems, ecologies, and interactivity between urban conditions, to inform design solutions that address scenarios of urban complexity and civic or infrastructural scale.
2. Apply an advanced level of theoretical and technical awareness in architectural and spatial design with an ability to explore and propose a variety of sensitive design solutions through the language of architectural representation in section, plan and models using both analogue and digital techniques.
3. Demonstrate an awareness of the broader cultural context in which architecture is practised, through the application of local and regional planning considerations and an understanding of the history and practice of urban design.
4. Understand and apply strategies for climatically responsive, equitable, humane, resilient, and robust design solutions for urban environments.
5. Generate technical and analytical drawings and reports using graphic and modelling skills to convey a design proposal.
6. Develop an awareness of the architect's professional, regulatory, and administrative roles, the business and entrepreneurial aspects of practice, and alternate roles of engagement.

Subject Content

1. Investigation of major public infrastructural projects and programs that influence urban and civic outcomes
2. Introduction to the professional architectural practice
3. Analysis of context and precedent to inform design decisions

4. Creative organisation of architectural programs and material assemblies in large-scale buildings or large-scale complex urban environments/scenarios

5. Graphic visualisation and literacy

6. The application of design technology to generate architectural solutions

Special Requirements

Legislative pre-requisites

Construction Site Induction Safety "White Card" – must be obtained in Year 1 of the program.

ARCH 3006 Urban Design

Credit Points 10

Legacy Code 102070

Coordinator Awais Piracha ([https://directory.westernsydney.edu.au/search/name/Awais Piracha/](https://directory.westernsydney.edu.au/search/name/Awais%20Piracha/))

Description The unit aims to provide students with an understanding of the nature, role and relevance of urban design. It will examine the issue of urban design at both the micro and macro scale. It also aims to promote awareness of, and sensitivity to, design considerations, and to enable students to critically evaluate urban spaces and places. A key feature of the course will be the development of the graphical communication skills of students.

School Social Sciences

Discipline Urban Design and Regional Planning

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects ARCH 3001 - An Introduction to Urban Design LGYA 1333 - Local Planning

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand the issues and concepts used by urban design professionals;
2. Develop design criteria and plans for public spaces;
3. Identify cultural heritage criteria in urban design, and address issues for appropriate protection and/or development of heritage;
4. Determine the environmental impacts of urban design, and address issues for appropriate environmental mitigation and/or enhancement;
5. Determine the social contexts of urban design, and address issues of social justice and community empowerment.

Subject Content

Urban utopias: garden cities to new urbanism
 Importance of streetscape design and neighbourhood character
 Topography, social context, history and design
 The environmental impacts of urban design
 Designing public realms: congregation and assembly
 Designing boundaries: exclusive and inclusive design
 Designing across the public / private binary
 Designing transit spaces: assisting with flows and routes
 Defensive spaces
 Crime prevention through design

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Critical Analysis of public space	1000 words	35	N	Individual
Individual Report	1500 words	30	N	Individual
Studio participation		35	N	Individual

ARCH 4001 Architecture Studio: Urban Architecture

Credit Points 20

Legacy Code 301316

Coordinator Ursa Komac ([https://directory.westernsydney.edu.au/search/name/Ursa Komac/](https://directory.westernsydney.edu.au/search/name/Ursa%20Komac/))

Description This unit will introduce students to urban architecture with complex brief requirements, site conditions and technological considerations. Emphasis is on design resolution considering historical, geographical and social aspects. Experimentation at various theoretical levels is expected and students are encouraged to deliver ambitious and imaginative architectural responses.

School Eng, Design & Built Env

Discipline Architecture

Student Contribution Band HECS Band 2 20cp

Level Undergraduate Level 4 subject

Restrictions Students must be enrolled in 3753 Bachelor of Architectural Design or 3768 Postgraduate Bridging Program (Architecture). Students not enrolled in 3753 or 3768 who wish to enrol into this subject should have a 5.0 minimum GPA and are required to discuss with the Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Address a large scale urban and/or public building design project.
2. Demonstrate a comprehensive knowledge of the technical requirements informing a large scale project
3. Analyse and evaluate the links among context, city and architecture.
4. Demonstrate an advanced design proficiency at a conceptual and technical level.

Subject Content

1. Introduction to the professional architectural practice.
2. Analysis of context and precedent to inform design decisions.
3. Creative organisation of architectural programs and material assemblies in large-scale buildings or large-scale complex urban environments/scenarios.
4. Graphic visualisation and literacy.
5. The application of design technology to generate architectural solutions.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
1x Design Project	Drawings and/or Models; 3 minutes (presentation)	20	N	Individual

1x Major Design Project (Group)	Drawings and Models; 3 minutes (presentation)	40	N	Both (Individual & Group)
Presentation (Individual)	Drawings, models and report	20	N	Individual
Portfolio & Reflection	1,000 words, visual compendium	20	N	Individual

Coordinator Louise Crabtree-Hayes ([https://directory.westernsydney.edu.au/search/name/Louise Crabtree-Hayes/](https://directory.westernsydney.edu.au/search/name/Louise%20Crabtree-Hayes/))

Description This unit provides an understanding of environmental, economic and social issues arising from the effects of urban development within city regions and examines the relationship between sustainable development and metropolitan planning in the Australian and global context. It focuses on the concepts related to sustainability, sustainable development and sustainable cities. It also looks into recent initiatives towards the realisation of sustainable cities.

School Social Sciences

Discipline Urban Design and Regional Planning

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 1340 - Land Use Strategy Design LGYA 1294 - Urban Challenges Developing Sustainable Places

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the multiple dimensions and concerns of urban and regional planning and design (i.e. social, economic, environmental and cultural) that contribute to the sustainable development of places.
2. Examine the implications of contemporary global trends and emerging issues to the sustainability of places.
3. Demonstrate capacity to engage meaningfully and ethically with diverse groups and stakeholders in the planning processes.
4. Justify a planning approach using relevant data that you have assembled and analysed, that aims to address and/or manage an issue relating to the development of sustainable places.

Subject Content

Regenerative and leading practice
Planning for and with nature.

Sustainability indicators.

Active destinations and placemaking

Planning for alternative transport modes

Planning for active living

Planning for and with diverse communities

Sustainable, diverse, and affordable housing

Land use planning and urban amenity

Climate change planning, adaptation, and equity

Healthy cities, healthy planet

Assessment

ARCH 7002 Heritage and Planning

Credit Points 10

Legacy Code 102069

Coordinator Anna Leditschke ([https://directory.westernsydney.edu.au/search/name/Anna Leditschke/](https://directory.westernsydney.edu.au/search/name/Anna%20Leditschke/))

Description This unit explores the values behind, and practicalities regarding, heritage and planning, from federal and state perspectives in Australia. With a specific focus on Sydney, the unit explores how planning applications, within the urban development sphere, impact upon heritage assets, and how these impacts are mitigated through heritage planning legislation. The unit asks students to step into the shoes of heritage planning professionals and to identify and research a heritage asset that is to be impacted by a potential planning proposal and then to design an appropriate mitigation response within the bounds of relevant heritage legislation.

School Social Sciences

Discipline Architecture and Urban Environment, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects ARCH 3001 - Introduction to Urban Design

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Summarise different conceptions of heritage.
2. Analyse the values that state and local government authorities and local communities place on heritage.
3. Apply heritage legislation to real world planning issues.
4. Access heritage planning research resources and apply these to authentic planning issues
5. Construct an appropriate mitigation response to heritage planning issues.
6. Critically evaluate the heritage planning process.

Subject Content

What is heritage? The sociological approach.

Why and how do governments and communities value heritage?

Federal and state heritage legislation as it relates to planning.

The role of local government.

Identifying and process of listing significance of a site.

The extant heritage planning recourses in NSW and how to access them.

The heritage planning mitigation process.

Indigenous heritage and planning issues.

Identifying heritage assets and planning impacts and designing an appropriate response case study.

The adaptive reuse of heritage for tourism.

Comparative heritage planning.

Problematizing heritage planning. Critiquing the heritage planning discourse.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Critical Review	1,200 words	30	N	Individual
Case Study	Report: 1,000 words (only the report is graded). Group Presentation: 5 minutes	30	N	Individual
Report	1,500 words	40	N	Individual

ARCH 7003 Managing Cities: History and Theory

Credit Points 10

Legacy Code 101633

Coordinator Rae Dufty-Jones ([https://directory.westernsydney.edu.au/search/name/Rae Dufty-Jones/](https://directory.westernsydney.edu.au/search/name/Rae%20Dufty-Jones/))

Description This unit concerns philosophical thought and critical thinking in public planning. It develops an understanding of planning theories and examines past and present trends in this area. It reviews the theoretical frameworks for an insight into planning processes and analyses the economic, spatial and socio-political dimensions of activities involved.

School Social Sciences

Discipline Architecture and Urban Environment, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 1293 - Metropolitan Structures Cities in Transformation

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess and create a collaborative explanation of the historic development of urban and regional planning.
2. Critically apply and relate understandings of planning histories and theories to contemporary planning.
3. Combine knowledge of planning histories and theories to explain how the role of the planner and planning practices have changed.

Subject Content

Historical overview of planning as a profession

History of urban planning of pre-industrial cities

Nineteenth century slums and the Garden City movement

The modern and the post-modern city

History of evolution of modes of transport, city form and suburbanization

The typologies of planning theory

Systems and rational theories of planning

Marxism and critical theory

Planning under neo-liberalism

Advocacy Planning

Post-modern theories

Post-colonial theories of planning

Collaborative planning

ARCH 7004 Planning and Development Control

Credit Points 10

Legacy Code 300708

Coordinator Grahame Douglas ([https://directory.westernsydney.edu.au/search/name/Grahame Douglas/](https://directory.westernsydney.edu.au/search/name/Grahame%20Douglas/))

Description This unit describes the general planning issues relevant to developments in rural and urban areas. The content covers the factors important in determining the allocation and use of land and resources together with the contributions of development to the built and natural environment. Topics include: urban and rural design issues; the impact of the 3 tiers of Government process on development control, and the legal, political and technical issues relevant to impact assessments. Particular attention will be paid to the role of the private sector in developing controls, self-regulation and appeal processes. Planning in both the micro and macro environments is examined in the context of sustainability, indigenous culture and heritage, private land conservation, community resources and its strategic effects on the recycling of existing land and non-renewable natural resources.

School Eng, Design & Built Env

Discipline Urban Design and Regional Planning

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain the conceptual planning issues and relevant State legislation;
2. Compare the requirements for and explain the differences between the various layers of planning as they relate to federal, state and local governments;
3. Review the political, social and physical influences that shape towns and cities and reflect on the role of the community and the courts in influencing development outcomes;
4. Discuss the concepts of environmental capacity, sustainability and the preservation of the natural and built environment and identify constraints to development;

5. Develop various responses for planning urban and rural developments;
6. Analyse the links between development and environmental impacts and identify mechanisms to limit those impacts in planning for safe and cost effective developments.

Subject Content

1. Conceptual planning issues and constraints;
2. Development control and its place in society;
3. Planning hierarchies and planning instruments (planning legislation);
4. Achieving planning objectives;
5. Exempt and complying development;
6. Sustainability and environmental impact;
7. Planning and the management of natural environments;
8. Planning and heritage conservation;
9. Rural development and coastal development;
10. Community consultation;
11. The role of the courts;
12. Planning and the future.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Short Answer	250 words max for each question (500 total)	20	N	Individual
Report	500 words max	20	N	Individual
Report	2,000 word report	30	N	Individual
Critical Review	1,000 words	30	N	Individual

ARCH 7005 Urban Management Practice: Governance and Power in the City

Credit Points 10

Legacy Code 101314

Coordinator Anna Leditschke ([https://directory.westernsydney.edu.au/search/name/Anna Leditschke/](https://directory.westernsydney.edu.au/search/name/Anna%20Leditschke/))

Description Governance is a central but often overlooked issue in Urban Management. What is governance? What are the principles of good governance? What are some of the governance challenges in major metropolitan cities that cover multiple jurisdictions? How do statutory local governments engage with specialist state agencies in fields such as economic development, environmental planning, and infrastructure planning? This unit answers these questions, reviews governance practices in major cities across the world and provides students with knowledge of key governance tools. Students will prepare a research report dealing with a significant urban governance challenge, and provide recommendations about how to implement solutions to that challenge. The central objective of the course is to provide students with a sound framework and set of tools with which to address governance issues.

School Social Sciences

ARCH 7006 Urban Planning Placement Project

Credit Points 10

Legacy Code 102604

Coordinator Andrew Gorman-Murray ([https://directory.westernsydney.edu.au/search/name/Andrew Gorman-Murray/](https://directory.westernsydney.edu.au/search/name/Andrew%20Gorman-Murray/))

Description This Urban Planning Placement Project unit provides Master of Urban Management and Planning and Master of Planning students with an understanding of the planning/urban management workplace. Students are placed with local planning or urban management employers to work on a variety of planning tasks. Placements are structured for student engagement in professional work in planning. Placement agencies ensure that students are supervised by experienced planners, are mentored through site visits and work on planning projects in a professional capacity. Agreements with supervisors and clear communication lines are set to clarify student engagement and their involvement in meaningful professional tasks that contribute to an authentic learning experience, rather than simply unpaid or irrelevant labour.

Equivalent Subjects LGYA 1297 - Urban Management Placement Project LGYC 4646 - Urban Management Placement Project

Restrictions

Students must be enrolled in 1873 Master of Urban Management and Planning or 1712 Master of Planning.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appreciate the role and function of the relevant employers in the NSW Planning/Urban Management system through engagement in professional planning work.
2. Understand the role of planners/urban managers through interactions with and supervision from experienced planners in the workplace.
3. Critically reflect on the learning they have gained in their workplace in demonstration of the links between theoretical knowledge of the discipline and its practical application.
4. Demonstrate the planning skills and knowledge acquired in their academic training in consideration of the ethical dimensions, issues and relevant guidelines when working in a professional context.

Subject Content

1. An introduction to work based learning, as part of a professional practice-oriented course that delivers advanced knowledge and practical skills applicable in the urban management and planning profession.
2. Compilation of a detailed professional reflective journal for the production of a critical reflective report
3. Interview skills, and building a professional relationship with a prospective employer
4. Seventy hours of professional work placement.
5. Mid placement seminar and journal review

Coordinator Ursa Komac ([https://directory.westernsydney.edu.au/search/name/Ursa Komac/](https://directory.westernsydney.edu.au/search/name/Ursa%20Komac/))

Description Advanced Design Communication is a core architecture seminar in the Master of Architecture (Urban Transformation) course that will explore contemporary methods of design generation and visualisation, representation techniques, and collaboration tools, including but not limited to digital fabrication, computational and algorithmic design, simulation, virtual and augmented reality, building information modelling, parametric design, and scripting. Students will undertake case studies from the community of practice and precedents in this disciplinary domain, including an investigation of how emerging technologies are used in existing professional settings locally and internationally. Students will develop their own design-based enquiry to apply knowledge and skills acquired in the seminar that result in a project and report of their work.

School Eng, Design & Built Env

Discipline Architecture

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 3761 Master of Architecture (Urban Transformation)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use digital tools and workflows from computation to fabrication as a way to conceive, test, and propose architectural and construction projects.
2. Evaluate and propose the use of computational techniques that enable specific and contingent outcomes of each project scenario.
3. Explore and apply ordering, sequencing and modelling of three-dimensional form and spatial content.
4. Apply manual and digital graphic techniques and modelling to describe three-dimensional form and spatial relationships.
5. Draw upon the history and theory of digital techniques in architectural design and representation.

Subject Content

1. Contemporary trends and emerging design communication technologies
2. Digital fabrication and design for manufacture
3. Building information modelling
4. Visualisation, simulation, rendering, virtual reality and augmented reality
5. Digital collaboration technologies and impacts upon professional/industry delivery strategies and enterprises

ARCH 7008 Integrated Building Technology

Credit Points 10

Legacy Code 301240

Coordinator Mohammad Reza Razavi ([https://directory.westernsydney.edu.au/search/name/Mohammad Reza Razavi/](https://directory.westernsydney.edu.au/search/name/Mohammad%20Reza%20Razavi/))

Description Integrated Building Technology is a core unit in the Master of Architecture (Urban Transformation) course that will introduce students to the range of specialist consultants in structural and civil engineering, mechanical, electrical, communications, and transport systems, fire safety and egress, and environmental systems (acoustics, lighting, thermal) that are required to complete real projects in practice. Students gain an insight into the principles and concepts of each discipline which provides sufficient depth of knowledge and understanding of the role of the architect to meaningfully engage and collaborate with the allied specialists. Understanding how to communicate and document the integration and coordination of systems in a building is developed through exposure to case studies, specialist presentations, and field trips. Students apply concepts introduced in the unit to the design studio project they are concurrently developing in unit Practice Research Studio Housing and demonstrate their understanding of system integration through graphic representation techniques and a design report.

School Eng, Design & Built Env

Discipline Architecture

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 3761 Master of Architecture (Urban Transformation)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the integration of relevant building systems appropriate to the design intent and goals of a building project.
2. Use digital and manual techniques to design, communicate and collaborate in the integration of specialist building systems.
3. Integrate construction, structural and civil engineering principles in the design and documentation of a building.
4. Integrate mechanical, electrical, communication, and transport system principles in the design and documentation of a building.
5. Integrate fire safety, suppression, and egress principles in the design and documentation of a building.
6. Propose designs incorporating environmental systems, principles of acoustics, daylighting and thermal conditions relevant to project.
7. Recommend appropriate materials for the project design with regards to selected finishes, fittings components and systems.

Subject Content

1. Building systems and specialist consultant teams required to delivery building projects
2. Communication, collaboration, documentation, and detailing tools and techniques to enable the work of a project team and integration into a building design
3. Structural and civil engineering principles for buildings
4. Mechanical, electrical, communication, transport principles buildings
5. Design principles for fire safety, suppression, and egress
6. Environmental systems and principles of acoustic, daylighting, and thermal design
7. Graphic representation and written communication of systems integration

Legacy Code 102769

Coordinator Stephen Healy ([https://directory.westernsydney.edu.au/search/name/Stephen Healy/](https://directory.westernsydney.edu.au/search/name/Stephen%20Healy/))

Description Planning for health and wellbeing is essential for ensuring human flourishing in our cities and regions. This unit investigates geographies of health, wellbeing and place through analysis of physical, mental and environmental health and spaces of wellbeing. Drawing on insights from geography, planning and related disciplines it asks how built environment professionals can create healthy futures through place making. Through local, national and international case studies the unit will explore how cities can be better designed to counter growing lifestyle epidemics, motivate active living and respond to the opportunities of population ageing and challenges of environmental change.

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain key health and wellbeing priorities facing planners nationally and internationally.
2. Identify relevant planning legislation and guidelines pertaining to health, wellbeing and place.
3. Identify and critically explain planning responses to health and wellbeing needs nationally and internationally.
4. Critically evaluate place-based responses to health and wellbeing in an Australian case study.

Subject Content

Physical health in the built environment
 Environmental health and environmental justice
 Planning for mental health
 Spaces of Wellbeing
 Geographies of disability
 Geographies of ageing and dementia
 Universal design
 Planning for active cities
 Therapeutic spaces

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Critical Review	1,000 words	25	N	Individual
Poster	500 + images	25	N	Individual
Presentation	10 minutes	10	Y	Individual
Case Study	1,500 words	40	N	Individual

ARCH 7015 Practice Research Studio Civic

Credit Points 20

Legacy Code 301382

Coordinator Paul Sanders ([https://directory.westernsydney.edu.au/search/name/Paul Sanders/](https://directory.westernsydney.edu.au/search/name/Paul%20Sanders/))

Description Practice Research Studio Civic shall focus upon the research and design of a single, comprehensive architectural project over the duration of the semester through either a civic, residential, or hybrid project type. Students will explore topics related to the broad umbrella of urban transformation and to contemporary architectural practices through the studio work, and will engage with a broad community of professionals, stakeholders, and programmatic conditions. Projects shall be representative of the often-contested intersection of competing interests of the urban environment, where the designer must conduct rigorous analysis and research to inform high-quality design outcomes that are attendant to social, ethical, regulatory, technical, procurement, and environmental issues. Students are expected to develop projects to a high degree of resolution in terms of spatial and experiential quality, technical proficiency, and conceptual rigour, underpinned by theoretical and historical knowledge, and communicated clearly. Projects in the studio will vary in scale, setting, building type, and complexity from year to year, with a thematic emphasis that contributes to the overall research direction of the architecture program at WSU. Students will be expected to engage in the studio with a high degree of individual motivation, resourcefulness, and inquisitiveness as would be expected of professional level studies.

School Eng, Design & Built Env

Discipline Architecture

Student Contribution Band HECS Band 2 20cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 3761 Master of Architecture (Urban Transformation)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse complex projects and physical sites incorporating diverse viewpoints and the range of conditions specific to architecture including social context and regulation.
2. Implement a reflective and iterative design process guided by well-developed judgement and ethical research.
3. Communicate designs or design concepts and research at a professional level.

4. Create design options that address the aesthetic, functional, contextual and technical aspects of a civic project using graphic, three-dimensional modelling and visualisation techniques.
5. Propose appropriate materials, components and systems for the specific context that support a holistic project.

Subject Content

1. Complex programmatic project brief and building type in an urban transformation context
2. Developing strategic frameworks, engaging multiple stakeholders, and using a design-synthesis approach
3. Research, analysis, and theory to inform design speculation and propositions
4. Emphasis upon design technology and contemporary methodology
5. Application of skills in architectural detailing and documentation toward implications for procurement and construction
6. Attendance to issues of environmental sustainability, regulation, social, ethical, and disciplinary concern

Special Requirements

Legislative pre-requisites

Construction Site Induction Safety "White Card".

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Case Study	Drawings and/or models and 300 words	20	N	Group

ARCH 7016 Practice Research Studio Housing

Credit Points 20

Legacy Code 301383

Coordinator Paul Sanders ([https://directory.westernsydney.edu.au/search/name/Paul Sanders/](https://directory.westernsydney.edu.au/search/name/Paul%20Sanders/))

Description Practice Research Studio Housing shall focus upon the research and design of a comprehensive architectural project over the duration of the semester through either a civic, residential, or hybrid project type (as distinct from Practice Research Studio Civic in the preceding semester). Students will explore topics related to the umbrella of urban transformation and to contemporary architectural practices through the studio work, and will engage with a broad community of professionals, stakeholders, and programmatic situations. Projects shall be representative of the often-contested intersection of competing interests of the urban environment, where the designer must conduct rigorous analysis and research to inform high-quality design outcomes that are attendant to social, ethical, regulatory, technical, procurement, and environmental issues. Students will undertake projects that involve international sites, project contexts, programs, or collaborations. Students are expected to develop project work to a high degree of resolution in terms of spatial and experiential quality, demonstrating through clear communication and representation techniques the technical proficiency, conceptual rigour, and theoretical and historical knowledge that support the project outcomes. Projects in the studio will vary in scale, setting, building type, and complexity from year to year, with a thematic emphasis that contributes to the overall research direction of the architecture program at WSU. Students will be expected to engage in the studio with a high degree of individual motivation, resourcefulness, and inquisitiveness as would be expected of professional level studies.

ARCH 7017 Urban Transformation Studio Local

Credit Points 20

Legacy Code 301398

Coordinator Hugo Moline ([https://directory.westernsydney.edu.au/search/name/Hugo Moline/](https://directory.westernsydney.edu.au/search/name/Hugo%20Moline/))

Description Urban Transformation Studio Local incorporates work integrated learning with a real world design project and expert mentoring giving students' opportunities to implement aspects of professional architectural practice. Students extend their skills in

creating a project that includes conducting site analyses, defining the program and designing conceptual models. This requires critical reasoning as well as ethical and aesthetic judgement for designing projects for presentations in concise written, oral and visual professional formats. Through the design process, students combine contemporary urban and architectural theory with architectural practice to create exciting visions of urban environments while integrating technical and legal regulations, and realising ethical obligations.

ARCH 7018 Architectural Professional Practice

Credit Points 10

Legacy Code 301404

Coordinator Angelo Korsanos ([https://directory.westernsydney.edu.au/search/name/Angelo Korsanos/](https://directory.westernsydney.edu.au/search/name/Angelo%20Korsanos/))

Description This unit introduces students to the expectations and the requirements that are needed for a professional practice in Architecture. As such students will require to critically examine a broad range of real life professional, legal, business and ethical challenges that are likely to face in practice and apply critical thinking in order to resolve these problems. The intention here is to assist students in navigating through complex real life challenges and to bring a common sense and real world approach to solving a problem. Transitioning from university to the workplace can be quite daunting thus, the aim here is to allow students to gain the knowledge and skills to make informed decisions but most importantly to build confidence in themselves as they move forward with their career.

School Eng, Design & Built Env

Discipline Architecture and Urban Environment, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 3761 Master of Architecture (Urban Transformation)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the competencies and performance criteria required by the NSW Board of Architects and the Australian Institute of Architects (AIA).
2. Critique the implication of the Architects' Professional Code of Conduct.
3. Critique the implication of the Client Architect agreement as it relates to contract law.
4. Demonstrate professional ethics on building procurement choices and tendering processes.
5. Critique the implication of the agent role of the architect.
6. Apply the architect's duty of care in providing architectural services.
7. Articulate the processes required to operate a small business enterprise as it relates to trade practice.
8. Examine the process of architectural practice through the design, approvals, documentation and contract administration stages.

Subject Content

1. Roles of the architect
2. Ethics and professional conduct, the Architects Code of Conduct
3. The process of architectural practice
4. Client architect agreements
5. Running a business
6. Marketing and financials
7. Entrepreneurship and pitching for work
8. Construction contracts

Credit Points 20

Legacy Code 301400

Coordinator Paul Sanders ([https://directory.westernsydney.edu.au/search/name/Paul Sanders/](https://directory.westernsydney.edu.au/search/name/Paul%20Sanders/))

Description In this high-level, project unit, students apply theory and practice to their urban transformation project relating to Greater Western Sydney region while being mentored in developing ethical and aesthetic judgement, creative imagination, independent and critical reasoning skills. Students learn to present a project design that is well resolved integrating spatial and experiential quality, contextual, cultural, social and environmental considerations, technical proficiency, and conceptual rigour. The design contributes to the students' portfolio of work demonstrating concept, resolution and presentation design skills leading towards ethical architectural practice as well as showcasing a civic project for Australia's greatest megatropolis.

ARCH 7020 Cool Green Cities

Credit Points 10

Legacy Code 102853

Coordinator Sebastian Pfautsch ([https://directory.westernsydney.edu.au/search/name/Sebastian Pfautsch/](https://directory.westernsydney.edu.au/search/name/Sebastian%20Pfautsch/))

Description Climate change, urban expansion and densification result in hotter microclimates and loss of green infrastructure. The increasing frequency and severity of heatwaves, floods and droughts require changes to how we design and retrofit existing neighbourhoods and build new suburbs. Contemporary urban planning and design principles recognise blue and green infrastructure as a 'must have'. Blue and green infrastructure is key to building cool and resilient cities capable of functioning well within the social, environmental and economic challenges of the 21st century. This unit provides knowledge about what it takes to deliver cool green cities. Focusing on practical applications at precinct or suburb scale, it enables students to implement learned principles in their professional practice.

School Social Sciences

Discipline Urban Design and Regional Planning

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects ARCH 7013 - Green Urbanscapes Bio-physical Functions and Services

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss complex functional links between services provided by urban ecosystems and how climate change may alter these functions.
2. Examine current and anticipated extent of urban ecosystems in metropolitan areas.
3. Evaluate biophysical dimensions of environmental impacts from urban development to critically assess/apply strategies for managing and developing urban regions.
4. Integrate ecological benefits and economic incentives of urban blue and green infrastructure into planning processes for sustainable urban development.

Subject Content

Urban ecosystems and urban planning
Blue and green urban infrastructure
Threatened urban ecosystems and strategic conservation planning
Urban cooling
Principles of Biophilia for contemporary, sustainable urban planning

BEHV 0001 Introduction to Human Behaviour (WSTC Prep)

Credit Points 10

Legacy Code 700220

Coordinator Paul Rouillon ([https://directory.westernsydney.edu.au/search/name/Paul Rouillon/](https://directory.westernsydney.edu.au/search/name/Paul%20Rouillon/))

Description This unit provides students with an overview and evolution of psychology and conventional scientific techniques and methods to explain and understand the causes of human behaviour and human personality. It also assists students in the development of academic skills commensurate with tertiary studies. Topics to be studied at an introductory level include: the history of psychology, intelligence, social psychology, psychoanalytic theories, behaviourist/learning theories, cognitive theories, biological view, developmental psychology and abnormal psychology.

School Western Sydney The College

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects BEHV 0002 - Introduction to Human Behaviour (UWSC)

Restrictions Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define and explain important concepts related to the subject.
2. Describe the major empirical findings or theories of the domains of psychology covered in the subject.
3. Distinguish key characteristics of major theories of human behaviour.
4. Demonstrate knowledge of individual differences and the influence of environmental context on behaviour.
5. Develop an argument in written form and apply referencing conventions.
6. Construct a coherent argument in oral form.

Subject Content

1. History of psychology, its ancient roots and evolution as a scientific discipline
2. Scientific principles of psychology
3. Applied psychology
4. Theories of intelligence
5. Psychoanalytic perspective
6. Cognitive perspective
7. Biological perspective
8. Social psychology
9. Developmental psychology
10. Abnormal psychology as part of the major perspectives
11. Humanistic perspective

BEHV 0008 Psychological Foundations of Health (WSTC)

Credit Points 10

Legacy Code 900123

Coordinator Ryan Sidoti ([https://directory.westernsydney.edu.au/search/name/Ryan Sidoti/](https://directory.westernsydney.edu.au/search/name/Ryan%20Sidoti/))

Description This unit provides an introduction to the psychology of health and behaviour relevant to understanding patient health decisions and outcomes. Students will be introduced to psychology and health to understand the tradition and relevance of psychology to nursing. This unit also includes foundation topics such as models of health and illness, health-behaviour change models, risk-taking behaviour, stress and health, learning and conditioning, personality and health, human development over the lifespan, death and dying, as well as group dynamics in health. These topics are offered as basic principles, theories, and models of psychology related to health behaviours, future learning, and professional practice in nursing.

School Western Sydney The College

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 0 Preparatory subject

Restrictions This subject is only available to College students enrolled in Foundation Studies programs.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply basic terminology, principles, theories, and models of psychology to account for health decisions and behaviours.
2. Reflect on personal health decisions and behaviour and relate this to psychological principles introduced in this unit.
3. Demonstrate a foundational understanding of individual and group differences and the impact of these when working with people from diverse backgrounds.
4. Effectively present thoughtful, considered views, arguments and information in written and oral formats, and
5. Apply group dynamics principles for effective team work and group management, along with the ability to monitor one's own work and others' work and performance.

Subject Content

Introduction to psychology and health
 Models of health and illness
 Health-behaviour change models
 Risk-taking behaviours
 Stress and health
 Learning and conditioning
 Personality and health
 Human development
 Death and dying
 Group dynamics in health

BEHV 1001 Behaviour and Environment

Credit Points 10

Legacy Code 101182

Coordinator David Arness ([https://directory.westernsydney.edu.au/search/name/David Arness/](https://directory.westernsydney.edu.au/search/name/David%20Arness/))

Description This is a fully online unit. Everything we do depends on our environment, but rarely do we ask the question "what is the environment?" In this unit, we examine our various environments, the natural world, our built physical spaces and things, and the social, biological, and psychological domains. We then examine questions of: How do we interact with these environments, and how do they shape and influence our behaviour? How does understanding this interaction help us improve the human condition, while also maintaining the integrity of the environment? Drawing from psychology to understand human behaviour, the unit has application to as many discipline areas as there are spheres of human activity.

School Psychology

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects LGYB 4217 - Computer Models in Psychology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define key concepts of the human-environment relationship.
2. Apply principles of psychology and the broader social sciences to aspects of the human-environment relationship.
3. Evaluate real-world situations to articulate problems of behaviour-environment interaction.
4. Develop arguments for change based on unit content and scholarly research.
5. Propose solutions to problems of behaviour-environment interaction, justifying your decisions based on scholarly research evidence.
6. Demonstrate how knowledge gained from the subject can be used to achieve better person-environment fit in a variety of design situations.

Subject Content

What constitutes the environment? The environment as a complex system of interconnected systems
 Consciousness ? The brain's relationship with its environment

The psychological environment (perceptions and preferences, values and attitudes, cognitions and behaviours)
Sense of place and

BEHV 1003 Introduction to Research Methods

Credit Points 10

Legacy Code 101190

Coordinator Emma Walter ([https://directory.westernsydney.edu.au/search/name/Emma Walter/](https://directory.westernsydney.edu.au/search/name/Emma%20Walter/))

Description This subject covers the conceptual underpinnings of research in psychology, including methodologies such as experimental, quasi-experimental, non-experimental and qualitative research. Conducting ethical research will be covered, including consideration of how research participants are positioned, issues related to research with diverse populations, as well research validity. Skills for writing research proposals and reports according to the conventions of the

Publication Manual of the American Psychological Association (APA) are developed.

School Psychology

Discipline Behavioural Science, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Learning Outcomes

1. Define and explain basic terminology, logic and procedures used in qualitative and quantitative research (APAC Graduate Attribute 1.1i, 1.1xii, 1.3)
2. Identify and apply appropriate criteria to evaluate research approaches and findings, including ethics and diversity considerations, including for Indigenous Australians (APAC GA 1.1xi, 1.1xii, 1.2, 1.3, 1.4)
3. Select and explain appropriate research skills for problems under investigation in psychology (APAC GA 1.1xii, 1.3)
4. Explain alignment of analytical procedures with research methods (APAC GA 1.1xii)
5. Demonstrate the capacity to design basic research, individually and as part of a group (APAC GA 1.1xii, 1.5, 1.6)
6. Demonstrate academic writing skills using the American Psychological Association (APA) structure and formatting conventions (APAC GA 1.3, 1.6)

Subject Content

1. The scientific method and psychology: Why study research methods?
2. Epistemology and research paradigms: Constructivism, positivism, realism
3. Overview of qualitative, quantitative and mixed methods
4. Qualitative research I: Key approaches (e.g. grounded theory, phenomenology)
5. Qualitative research II: Qual research design and techniques in data analysis
6. Quantitative research I: Research hypotheses; IVs and DVs
7. Quantitative research II: Research design; experimental and correlational
8. Quantitative research III: Sampling and hypothesis testing
9. Quantitative research IV: Descriptive statistics; central tendency and variance
10. Writing research proposals and reports
11. Research validity: Threats to internal and external validity, controlling extraneous variables
12. Research ethics and diverse populations

BEHV 1009 Living, Learning and Working on the Web

Credit Points 10

Legacy Code 102502

Coordinator Benjamin Hanckel ([https://directory.westernsydney.edu.au/search/name/Benjamin Hanckel/](https://directory.westernsydney.edu.au/search/name/Benjamin%20Hanckel/))

Description This unit prepares students for living, learning and working in a digital society. We examine how the web mediates behaviour, communication and culture in contemporary times. Students learn by participating and enterprising in online spaces as part of a supportive learning community. This unit also provides an important opportunity for students to develop a professional online web presence and identity that is relevant for their university studies, employability and the future of work.

School Social Sciences

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Participate in online spaces with relevant communities and audiences
2. Interpret online behaviour, communication and participation using psychological and social theories
3. Identify ways in which the web shapes and influences everyday social practices
4. Curate a professional online web presence and identity
5. Design and produce digital content on contemporary social issues
6. Demonstrate an entrepreneurial approach to the dissemination and promotion of digital content

Subject Content

1. The participatory web for learning communities
2. The self online in networked publics
3. Knowledge creation, user generated content and storytelling practices
4. Digital inequalities - human rights, inclusion and citizenship
5. Ethical issues - privacy, surveillance, and safety
6. Influencing on the web - social change and digital activism
7. Researching social life using the social web and digital technologies
8. Digital entrepreneurship
9. Social media, employability and the future of work
10. Life long learning and the future of knowledge production

Assessment

BEHV 1010 Positive Psychology: The Science of Happiness, Resilience, and Wellbeing

Credit Points 10

Legacy Code 102606

Coordinator Kell Tremayne ([https://directory.westernsydney.edu.au/search/name/Kell Tremayne/](https://directory.westernsydney.edu.au/search/name/Kell%20Tremayne/))

Description We live in an increasingly volatile, uncertain, complex, and ambiguous (VUCA) world which places greater emotional demands on people and organisations. This unit introduces the Positive Psychology theory, research and the practical evidence-based techniques to enhance wellbeing and resilience in an increasingly VUCA world. Positive psychology is an emerging field of academic study and practical application in personal and work settings which focuses on the creation of individual resilience, strengths and virtues, creativity and other indicators of human flourishing. Throughout this unit, students will be encouraged to actively engage and apply the positive psychology concepts taught within the course and to critically reflect on these experiences to bring about personal change.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

- Identify the major themes in the nature and history of positive psychology.
- Discuss the important role of positive psychology in varying contexts.
- Outline the key theoretical concepts and major empirical findings in the domains of positive psychology covered in the subject: optimism, resilience, wellbeing, motivation, cognition and emotion.
- Critically reflect on positive psychology theory and empirical research.
- Summarise the application of techniques learned in positive psychology.
- Demonstrate the capacity to implement empirically-driven strategies explored within the subject.

Subject Content

- The Nature and History of Positive Psychology: Some of the questions we seek to answer are What is Positive Psychology? Where does Positive psychology fits into the history of psychology? Who should study/use positive psychology How Positive Psychology uses the Scientific Method?
- Optimism and Resilience: What is the difference between irrational and realistic optimism? What is the evidence for optimism on various life outcomes? Can realistic optimism and resilience be learned? What are the different explanatory styles? How explanatory styles influence resilience? Are there practical ways to have a flexible explanatory style in preparation for a stressor (rather than just response)?
- Happiness: What is happiness and can it be measured? What is going on in the brain? Is happiness state or trait based? What is the research on the dynamic pursuit of happiness? How can we increase happiness and positive emotions? Is there a benefit to increasing happiness other than just feeling good? Are there practical evidence-based techniques to increase happiness?
- Character strengths: Focus on individual differences in personality and strengths of character. Is there a 'happy' or 'successful' personality? Can we increase positive outcomes by first looking at individual strengths and individual weaknesses in performance/character?
- Positive emotions and success outcomes. What is the relationship between positive emotions and many of life's success outcomes? Is this relationship causal? What are the theories that highlight this relationship? What practical evidence-based techniques can I bring into my daily life?
- Meaning, purpose, and positive connections. What is

BEHV 1014 Psychology and Health

Credit Points 10

Legacy Code 101614

Coordinator Steve Cumming ([https://directory.westernsydney.edu.au/search/name/Steve Cumming/](https://directory.westernsydney.edu.au/search/name/Steve%20Cumming/))

Description This unit provides an introduction to the psychology of health, mental health, and health-related behaviour, as relevant to health science professions. Students will be introduced to the principles and applications of psychology and health behaviour, using a biopsychosocial framework. This will be followed by an examination of the psychological aspects of injury and illness and an introduction to psychological interventions related to health concerns. Emphasis is

upon understanding health status and mental illness in light of relevant theory and research.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BEHV 1006 - Introduction to the Psychology of Health BEHV 1015 - Psychology and Health (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define the basic principles, theories and methods of psychology as related to health behaviours.
2. Apply basic health psychology principles to issues of health and wellness.
3. Apply appropriate psychological research to the experience and management of health behaviours.
4. Identify the basic principles of a biopsychosocial approach to mental health and mental illness, including broad types of mental disorders.
5. Demonstrate introductory knowledge of clinical mental health by identifying the aetiology, maintaining factors, and treatment of selected mental disorders.
6. Articulate the roles of psychology and the broader health profession to health and wellbeing.

Subject Content

Psychology of health - Applying psychology to health

Models of health and illness

Health Behaviour - Factors that influence health behaviours - Models of health behaviour

Psychological interventions for health concerns - Models of

intervention - Behaviour change methods - Cognitive and behavioural treatments

Psychology of the patient - Symptom perception and interpretation -

Help seeking behaviour

Psychological aspects of injury and illness - Psychological antecedents

and reactions to injury and illness - Psychological aspects of

rehabilitation - Chronic illnesses and pain

Role of psychology in common health issues such as obesity and stress

Introduction to topics of mental health and mental illness - Clinical

psychology - Main types of mental disorders

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Log/ Workbook	Two submissions with a combined total of 1,000 words	30	N	Individual

Quiz	15% each x 2 quizzes = 30% (30 questions per quiz)	30	N	Individual
Report	1,200 words	40	N	Individual

BEHV 1018 Psychology: Human Behaviour

Credit Points 10

Legacy Code 101184

Coordinator Kell Tremayne ([https://directory.westernsydney.edu.au/search/name/Kell Tremayne/](https://directory.westernsydney.edu.au/search/name/Kell%20Tremayne/))

Description Psychology is a field of scientific inquiry that uses a set of scientific techniques and methods to explain and understand the causes of behaviour. As a profession, psychology applies its knowledge to practical problems in human behaviour. This unit covers a range of topics in psychology at an introductory level including: the history of psychology, intelligence, social psychology, developmental psychology, Australian Indigenous and cross-cultural psychology, personality, and abnormal psychology.

School Psychology

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use information resources, including the library.
2. Explain the key theoretical concepts and major empirical findings in the domains of psychology covered in the subject: History of psychology, indigenous and cultural psychology, social psychology, developmental psychology, intelligence, personality, and abnormal psychology.

3. Identify issues of indigenous and intercultural diversity associated with the study and application of psychology across the different disciplines.
4. Describe the methods used by psychologists in their research, including the importance of a literature review to research and practice, and an evaluation of ethical practice.
5. Apply basic critical thinking and argument formation in a literature review writing task adhering to the APA (American Psychological Association) Publication Guidelines (5th edition), including all stages of literature collation and review within a particular topic, information literacy, and the appropriate technique for referencing material.
6. Identify the influence of individual differences and of environmental context on behaviour.
7. Demonstrate foundational information literacy by navigating information resources, including the library, to collect credible material.
8. Explain the key theoretical concepts and major empirical findings in the domains of psychology covered in the subject.
9. Evaluate psychological approaches to cultural diversity and Australian Indigenous perspectives.
10. Describe the methods used by psychologists in their research, including the importance of a literature review to research and practice, and an evaluation of ethical practice.
11. Apply basic critical thinking and argument formation in a literature review writing task adhering to the current APA (American Psychological Association) Publication Guidelines.
12. Identify the influence of individual differences and of environmental context on behaviour.

Subject Content

BEHV 1021 The Individual in Society

Credit Points 10

Legacy Code 101557

Coordinator Sky Hugman ([https://directory.westernsydney.edu.au/search/name/Sky Hugman/](https://directory.westernsydney.edu.au/search/name/Sky%20Hugman/))

Description This unit introduces the main theoretical perspectives for understanding the 'individual in society', including: humanistic, biological, cognitive, behavioural and socio-cultural explanations of individual behaviour. These perspectives are further understood through application of the 'levels of analysis' framework. The content then moves on to social psychology and covers topics such as: self and identity, attitudes and attitude change, conformity and obedience, prejudice and discrimination, aggression, pro-social behaviour and attraction and close relationships. Students explore the relevance of these topics to everyday life and contemporary issues.

BEHV 1022 The Individual in Society (Block Mode)

Credit Points 10

Legacy Code 101764

Coordinator Rashid Flewelling Jr ([https://directory.westernsydney.edu.au/search/name/Rashid Flewelling Jr/](https://directory.westernsydney.edu.au/search/name/Rashid+Flewelling+Jr/))

Description In this unit students focus on understanding individuals within their social and physical context. They are introduced to psychology as the scientific study of behaviour and mental experience. Students examine how individual psychology interacts with society, culture, and the physical environments. Featured topics include self and identity, close relationships, social relations and groups, empathy and pro-social behaviour, prejudice, conflict and aggression. Students are guided to explore Aboriginal and Torres Strait Islander perspectives, and the emerging field of indigenous psychology, and to consider what implications these have for a better understanding of psychology and the individual in context.

School Social Sciences

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BEHV 1021 - The Individual in Society

Restrictions Students must be enrolled in 1689 Bachelor of Community and Social Development.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define the science of psychology, and identify subfields within psychology.
2. Describe the role of the brain in determining behaviour and the main brain processes.
3. Apply a systems framework to understanding the individual in context.
4. Discuss the factors influencing social behaviour.
5. Identify issues for indigenous psychology in general, and for Aboriginal and Torres Strait Islander psychology specifically.

Subject Content

Psychology - the science of behaviour and mental experience; brain processes and areas of psychology; individuals in the context of their psychological, biological, social, cultural, and physical domain.

Consciousness: The brain's relationship with its environment

Brain processes and culture (e.g., perception, learning, worldviews, values, attitudes)

Psychology and place

Self and identity, self-interest, and attachment

Close relationships

Social groups (e.g., families, communities, "tribal" groups, nations)

Similarity and difference: Empathy and prosocial behaviour; alienation and aggression

Prejudice, discrimination, and inter-group behaviour

Indigenous psychology

Aboriginal and Torres Strait Islander psychology

Social influence and the global context of psychology

Assessment

Pre-requisite(s) BEHV 0001 (Diploma of Criminal and Community Justice Extended only)

Co-requisite(s) Before taking BEHV 1023 students in programs 6023 6027 or 6030 must have passed or be registered in CULT0006 and LANG 0003 and students in program 6029 must have passed or be registered in LANG 0003 GEDU 0014 and JUST 0003

Equivalent Subjects BEHV 1021 - The Individual in Society

Restrictions

Students must be enrolled at Western Sydney University, The College unless they have permission from the School. Students enrolled in extended diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject. Students enrolled in the Diploma of Criminal and Community Justice Extended must have successfully completed BEHV 0001 Introduction to Human Behaviour.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the major perspectives in psychology and key social psychological theories and concepts;
2. Summarise levels of analysis and selected social psychological theories and concepts;
3. Apply key theories and concepts to everyday life and contemporary issues.

Subject Content

Major perspectives in psychology.

Levels of analysis framework.

Self and identity.

Attitudes and attitude change.

Prejudice and discrimination and inter-group behaviour.

Social influence.

Aggression and pro-social behaviour.

Attraction and close relationships.

Language, communication and culture.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Reflection	750 words	25	N	Individual
Log/ Workbook	Weekly from week 2-week 11	15	N	Individual
Reflection	2000 words - 750 words, 1250 words	40	N	Individual
Quiz	10 quizzes up to 1 hour each In-class test in week 12 tutorial 10%	20	N	Individual

BEHV 1024 Applied Psychology

Credit Points 10

Legacy Code 102706

Coordinator Karen Mattock ([https://directory.westernsydney.edu.au/search/name/Karen Mattock/](https://directory.westernsydney.edu.au/search/name/Karen%20Mattock/))

Description Psychology is defined as the science of human behaviour and mental processes. Psychological theories aim to explain diverse aspects of everyday human experience and behaviour and are applied in diverse social, organisational and professional settings. In this subject, students explore key domains of psychological inquiry and practice, how psychological research and theory influences and impacts individuals, groups and communities, and how psychology theory can be used to analyse contemporary issues. Students are encouraged to evaluate the different ways psychological research is communicated.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Restrictions

There are no enrolment restrictions for this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate information literacy and use resources including the library to collate literature and review information on a particular topic.

2. Explain the key theoretical concepts and major empirical findings in the domains of psychology covered in the subject.
3. Describe the methods used by psychologists in their research, including the importance of a literature review to research and practice.
4. Apply basic critical thinking and argument formation in writing that adheres to the APA (American Psychological Association) Publication Guidelines, particularly in referencing material.
5. Construct a partial research report conforming to APA Publication Guidelines.

Subject Content

- Introduction to and the history of Psychology
- Cognitive Psychology
- Social Psychology
- Sensation and Perception
- Motivation
- Learning
- Research Methods

Coordinator Tamara Watson ([https://directory.westernsydney.edu.au/search/name/Tamara Watson/](https://directory.westernsydney.edu.au/search/name/Tamara%20Watson/))

Description This unit examines the psychological principles underlying users' experience of design. After introducing fundamental principles of human perception and cognition, we will explore the way these principles shape the experience of users when interacting with a designed product. The unit will also introduce the experimental approaches used to study perceptual and cognitive processes, focussing on critical evaluation of design principles and highlighting techniques relevant to user experience evaluation.

School Psychology

Discipline Behavioural Science, Not Elsewhere Classified.

BEHV 2002 Brain and Behaviour

Credit Points 10

Legacy Code 101684

Coordinator Tamara Watson ([https://directory.westernsydney.edu.au/search/name/Tamara Watson/](https://directory.westernsydney.edu.au/search/name/Tamara%20Watson/))

Description This unit provides an introduction to the biological and neuroscientific bases of human behaviour. Topics covered include the chemistry of life, the molecular basis of life, the cell and some of the major organ systems of the human body with particular reference to the nervous, endocrine and sensory systems. The unit has a significant laboratory component which reinforces lecture and text material. Students will be introduced to the biological and neuroscientific concepts necessary for a thorough understanding of areas of psychology such as abnormal psychology, cognitive processes, developmental psychology, human learning, and physiological psychology.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects LGYA 0972 - Neuroscience

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain how biological psychology is a scientific discipline and distinguish its major objectives (APAC Graduate Attribute 1).
2. Identify the major themes and perspectives of biological psychology (APAC GA 1).
3. Describe the structure and function of the central and peripheral nervous system (APAC GA 1)
4. Analyse the major theoretical and empirical perspectives associated with various brain processes, and evaluate how these processes impact mental functioning and behaviour (APAC GA 1);
5. Apply knowledge of biological psychology to explain a range of clinical conditions.
6. Appraise the effectiveness of demonstrations that address theories and propositions in biological psychology, evaluate the associated research hypotheses; undertake a relevant literature search; summarise the salient points and formulate a conclusion in a literature review (APAC GA 2 and 5).
7. Distinguish biological psychology as a scientific discipline and explain its major objectives.
8. Identify the major themes and perspectives of biological psychology.
9. Describe the structure and function of the central and peripheral nervous system.
10. Analyse the major theoretical and empirical perspectives associated with various brain processes, and evaluate how these processes impact mental functioning and behaviour.
11. Appraise the effectiveness of demonstrated theories and propositions in biological psychology by conducting a phased literature review responding to an associated hypothesis.

Subject Content

1. Nervous system 1
2. Nervous system 2
3. Neurotransmitters
4. Sensory systems
5. Movement
6. Learning and memory
7. Neuroplasticity
8. Emotion and stress
9. Hunger

BEHV 2005 Human Learning

Credit Points 10

Legacy Code 101676

Coordinator Gabrielle Weidemann ([https://directory.westernsydney.edu.au/search/name/Gabrielle Weidemann/](https://directory.westernsydney.edu.au/search/name/Gabrielle%20Weidemann/))

Description Human Learning is concerned with the experimental analysis of human and animal behaviour and focuses upon associative learning, including classical conditioning, operant conditioning, and social learning approaches. Definitions, assumptions, and basic phenomena associated with the study of learning are described and evaluated in terms of their ability to account for various aspects of human behaviour and experience. The practical work highlights important concepts introduced in the lecture program and focuses upon practical techniques of use in everyday situations.

School Psychology

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Learning Outcomes

1. Understanding of the basic principles of associative learning and social learning theory (APAC Graduate Attribute 1.1i, 1.1v, 1.3)
2. Use basic principles of associative learning and social learning theory to attempt to modify their own behaviour to bring it into line with their stated goals (APAC GA 1.1v, 1.2, 1.5)
3. Describe the therapeutic techniques derived from learning theory (APAC GA 1.1iv, 1.1v)
4. Measure and record their own behaviour, explain and defend the method used, and evaluate whether it appropriately quantifies the identified target behaviour (APAC GA 1.2, 1.3, 1.6)
5. Individually and with others, apply basic principles of associative learning and social learning theory beyond the examples given in lectures and tutorials to new situations and identify how these principles might work (APAC GA 1.1v, 1.3, 1.5)
6. Summarise the ideas of associative learning and social learning theories and explain how they can be differentiated from other similar concepts in the form of a report and an audio-visual presentation (APAC GA 1.1v, 1.3, 1.5, 1.6)

Subject Content

Lectures:

Paradigms in the investigation of learning

Habituation and sensitization

Pavlovian to Instrumental transfer

Pavlovian conditioning 1: The basics

Pavlovian conditioning 2: Connectionism and learning

Pavlovian conditioning 3: Applications

Operant conditioning 1: The basics

Operant conditioning 2: Reinforcement and punishment

Operant conditioning 3: Behavioural economics and choice

Learning and abnormal behaviour

Behaviour modification, behaviour therapy, and cognitive behaviour therapy

Learning and addiction

Learning and effective study methods

Tutorials:

Habituation in the snail

How to measure behaviour

Classical conditioning: Demonstration

Self-control: measuring your own behaviour

Classical conditioning: Concepts

Teaching learning employing mini-lectures

Operant conditioning: concepts

Assertion training and social behaviour

Case studies in behaviour change

Attitudes and learning and the implicit association test

Special Requirements

Legislative pre-requisites

Students participating in a NSW Public Health related placement must meet the following Special Legislative Requirements. Students who do not meet these requirements, will not be able to take their placement.

1. National Criminal History Check: Students must have a current (expiring 3 years from date of issue) check valid for their entire program. A valid National Criminal history check must be an Australia wide check, include the student's full name matching their Student ID card and date of birth and not have any offences listed. If a student has a criminal history identified on their check, they must provide a Clinical Placement Authority Card (CPAC) or conditional letter from the NSW HealthShare Employment Screening and Review Unit https://www.health.nsw.gov.au/careers/student_clearance/Documents/appendix-10-student-application.pdf
International students must additionally have a translated International Police Check or statutory declaration.
2. A NSW Working with Children Check (WWCC) clearance letter issued under the category of volunteer valid for their entire program.
3. A current approved first aid certificate valid for their entire program. Approved provider courses can be found at <http://training.gov.au> (<http://training.gov.au/>).
4. A completed vaccination/immunisation card with all serology results containing expiry dates and currency must be maintained by the student to ensure compliance for their entire course.
5. NSW Undertaking/Declaration form.
6. Completed any additional health forms required (such as NSW Health Code of Conduct, Health Student Undertaking/Declaration and Tuberculosis (TB) Assessment Tool).
7. Relevant Local Health District specific documentation as requested.

Contact your School for further details. Resources are also available on the Placement Hub (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/) website.

Assessment

BEHV 2008 Mental Health in the Community

Credit Points 10

Legacy Code 101594

Coordinator Rosemary Qummouh ([https://directory.westernsydney.edu.au/search/name/Rosemary Qummouh/](https://directory.westernsydney.edu.au/search/name/Rosemary%20Qummouh/))

Description Mental health service delivery in the community is now the main form of care for people across the lifespan living with mental and emotional disorders. The development of a wider range of pharmacological, psychological and psychosocial treatments has enabled many people to live productively in the community. This unit explores the changes in policy and practice in the development of integrated mental health care and the impact of these changes on the lives of people living with mental illness and their communities. Early intervention, resilience and recovery are concepts explored in this unit in terms of mental health and wellbeing.

School Social Sciences

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Restrictions Students must be enrolled in 1665 Bachelor of Community Welfare, 1666 Bachelor of Social Work, 1709 Bachelor of Criminal and Community Justice, 1710 Bachelor of Criminology, 1713 Bachelor of Criminal and Community Justice/Bachelor of Social Work, 1734 Bachelor of Policing (Leadership Program), 1844 Bachelor of Policing, 2766 Bachelor of Criminology/Bachelor of Laws, 2767 Bachelor of Criminal and Community Justice/Bachelor of Laws, 6025 Diploma in Criminal and Community Justice/Bachelor of Criminal and Community Justice or 7170 Undergraduate Certificate in Counselling and Mental Health.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the theories and discourses underlying contemporary mental health care and treatment.
2. Understand major mental health disorders, and identify a range of interventions and management approaches.
3. Critically describe the significant policy changes and implications for mental health service delivery.

4. Recognise the presentation of mental illness and emotional disorders in clients in community settings.

Subject Content

1. Mental health: contemporary theory, policy and practice issues
2. Mental health literacy- understanding the diagnostic framework,; signs and symptoms of mental illness.
3. Indigenous social and emotional wellbeing
4. Cultural understandings of mental health and illness.
5. Navigating the mental health system
6. The lived experience of mental illness.
7. Interventions in mental health and illness
8. Advocacy and systemic change in mental health

BEHV 2010 Perception

Credit Points 10

Legacy Code 101680

Coordinator John Cass ([https://directory.westernsydney.edu.au/search/name/John Cass/](https://directory.westernsydney.edu.au/search/name/John%20Cass/))

Description This unit examines the fundamental principles underlying human perception and expands upon the sensation and perception content introduced in the foundational psychology units. After reviewing the biological basis of sensing and perceiving, we will explore the way this relatively raw information is processed and organised into the complex perceptions of the visual, auditory, olfactory, gustatory and somatosensory systems, which constitute the fundamental basis of our experience of the world. The unit will also examine the history of perceptual theories and the use of psychophysical methods and experimental approaches to the study of perceptual processes

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BEHV 1016

Equivalent Subjects BEHV 2001 - Biological Psychology and Perceptual Processes

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate understanding of the major neural structures and computational principles associated with human sensation and perception, specifically including visual, auditory, somatosensory and chemical sensory systems.
2. Demonstrate how the major perceptual systems impact on mental functioning and behaviour using the scientific method.
3. Describe and evaluate theories and propositions of aspects of sensory and perceptual processes.
4. Complete a Scientific Laboratory Report conforming to APA Guidelines.

Subject Content

1. Introduction: This topic will introduce perception and sensory processing. It will include the early philosophy of perception, gestalt principles, psychophysics and the importance of biology.

2. Chemical Senses: This area will introduce you to the structure and function of the chemosensory systems focussing on olfaction and gustation. You will learn about olfactory and gustatory stimuli, receptors and coding. We will look at connections between odour, memory and emotions, and specifically examine the cross-modal interactions of taste and odour (flavour) including hedonics.

3. Touch: This topic will cover the phenomenology and physiological coding of human somatosensation, including what environmental information is encoded, and how this is represented in the cortex.

4. Audition: This topic will introduce you to auditory stimuli, physiology, and psychoacoustics. The presented material will examine the perception of sound in the environment and perception of complex sounds including language and music.

5. Vision: This area will cover a range of visual topics. After an introduction to the visual receptors, neural processing and central processes, you will learn about the perception of colour and the role of attention in vision. We will also look at depth/space perception, binocular vision, recognising objects and gestalt principles.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Report	Part 1: Experimental code and stimulus design (/25%. Approximately 20 hours of work); Part 2: Methods, Results and brief Discussion (/25%. Max. 1000 words)	50	N	Group
Portfolio	3 x 100 words	15	N	Individual
Final Exam	2 hours	35	N	Individual

BEHV 2015 Mental Health in the Community (WSTC)

Credit Points 10

Legacy Code 700301

Coordinator Paul Rouillon ([https://directory.westernsydney.edu.au/search/name/Paul Rouillon/](https://directory.westernsydney.edu.au/search/name/Paul%20Rouillon/))

Description Mental health service delivery in the community is now the main form of care for people across the lifespan living with mental and emotional disorders. The development of a wider range of pharmacological, psychological and psychosocial treatments has enabled many people to live productively in the community. This unit explores the changes in policy and practice in the development of integrated mental health care and the impact of these changes on the lives of people living with mental illness and their communities. Early intervention, resilience and recovery are concepts explored in this unit in terms of mental health and wellbeing.

School Social Sciences

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BEHV 2008 - Mental Health in the Community

Restrictions Students must be enrolled at Western Sydney University, The College. Students enrolled in Extended College programs must have passed 40 credit points of the preparatory subjects in these programs in order to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the theories and discourses underlying contemporary mental health care and treatment.

2. Understand major mental health disorders, and argue the importance of early intervention and evidence based treatment and management.
3. Critically describe the significant policy changes and implications for mental health service delivery.
4. Recognise the presentation of mental illness and emotional disorders in clients in community settings.

Subject Content

Mental health: contemporary theory, policy and practice issues.
 Mental health literacy - understanding the diagnostic framework; signs and symptoms of mental illness.
 Indigenous social and emotional wellbeing.
 Cultural understandings of mental health and illness.
 Navigating the mental health system.
 The lived experience of mental illness.
 Interventions in mental health and illness.
 Advocacy and systemic change in mental health.

BEHV 2018 Personality

Credit Points 10

Legacy Code 102906

Coordinator Emma Walter ([https://directory.westernsydney.edu.au/search/name/Emma Walter/](https://directory.westernsydney.edu.au/search/name/Emma%20Walter/))

Description Most of us probably use the term 'personality' almost every day. Yet the conceptualisation and definition of personality is far from settled. This unit introduces the controversies and debates in the psychology of personality, as well as the major theoretical and applied approaches to its measurement. Emphasis is placed on an understanding of personality research and its implications for the practice of psychology.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BEHV 2011 - Personality Motivation and Emotion
BEHV 3017 - Personality

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the major theories of personality.
2. Analyse contemporary personality research to solve scientific problems.
3. Identify the practical implications of individual differences and personality research to applied psychology.
4. Demonstrate effective written expression of scientific thinking using APA structure and formatting conventions.

Subject Content

Introduction to Personality: General overview of definitions and approaches. The place and value of personality theory in psychology as a whole. The question of a scientific outlook. Criteria for evaluation of personality theories. Introducing the four major approaches: The Psychoanalytic Approach: Freud's psychoanalytic perspective; psychoanalytic alternatives to Freud; Neo-Freudian psychoanalytic perspectives.

The Behaviourist Approach: Radical behaviourism; cognitive behaviourism.

The Humanistic/Existentialist/Phenomenological Approach.

The Dispositional Approach.

Personality assessment and research.

Comparisons and evaluations.

Assessment

BEHV 3002 Abnormal Psychology

Credit Points 10

Legacy Code 101681

Coordinator Kiley Seymour ([https://directory.westernsydney.edu.au/search/name/Kiley Seymour/](https://directory.westernsydney.edu.au/search/name/Kiley%20Seymour/))

Description Abnormal Psychology is the study of behaviours that cause distress or dysfunction or are judged as deviant within the individual's culture. This subject examines definitions of abnormality, ways of assessing and diagnosing abnormality, theories of the causation of psychological abnormality and treatments for recognized psychological disorders. Diagnostic criteria from the latest edition of the Diagnostic and Statistical Manual of Mental Disorders are applied to illustrative cases with emphasis on contemporary Australian research and theory. The development of integrated models of abnormality, including biological, psychological and social factors, is a significant theme of the subject.

School Psychology

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BEHV 1016 AND BEHV 1018

Equivalent Subjects BEHV 3001 - Abnormal Behaviour and Psychological Testing

Incompatible Subjects BEHV 3003 - Abnormal Psychology (online)

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Assumed Knowledge

A basic understanding of core concepts of personality, social and developmental psychology.

Learning Outcomes

1. Distinguish features of contemporary theories of abnormality within the major paradigms, and examine relationships between causal theory, diagnostic criteria and approaches to the treatment of abnormal behaviour (APAC Graduate Attribute 1.1, 1.iii, 1.1iv, 1.1viii, 1.3).
2. Analyse theories of abnormal psychology in cultural contexts, including from Indigenous Australian perspectives.(APAC GA 1.1iii, 1.1xi, 1.2, 1.4).
3. Apply diagnostic criteria to case material and research methodologies to discern the aetiology, course, and treatment of abnormality (APAC GA 1.1 1.1iii, 1.1iv, 1.1viii, 1.1xii, 1.3).
4. Demonstrate skills in the critical evaluation of empirical reports and case studies through literature searches and reviews (APAC GA 1.1xii, 1.3, 1.6).
5. Demonstrate skills in communicating findings from research and case presentations, including interprofessional perspectives (APAC GA, 1.3, 1.5, 1.6).

Subject Content

1. Definitions, history and scope of abnormal psychology; psychodynamic, cognitive-behavioural, existential-humanistic and systems approaches to causation and treatment of abnormality;
2. Goals and ethics of counselling/therapy; the clinical assessment interview; diagnostic classification systems; a detailed analysis of DSM-5;
3. The impact of culture, gender and developmental stage on diagnosis and treatment; a bio-psycho-social model;
4. Stress, trauma and coping: vulnerability and reactions to stress across the lifespan; psychological factors affecting physical health, psychophysiological and somatic symptom disorders; adjustment disorders; dissociative disorders;
5. Anxiety disorders: diagnosis, aetiology and treatment from an integrated bio-psycho-social perspective;
6. Developmental and Cognitive disorders: with emphasis on pervasive developmental disorders and cognitive disorders of adulthood;
7. Eating disorders
8. Substance use disorders;
9. Psychotic disorders
10. Mood disorders: major depressive disorder; bipolar disorder; the depression-suicide link;
11. Sexual variations and disorders: the continuum of human sexuality and problems of identifying and treating sexual disorders;
12. Personality disorders: definitional problems and classification; Borderline personality disorder;

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BEHV 3004 Advanced Research Methods

Credit Points 10

Legacy Code 101689

Coordinator Sandra Garrido ([https://directory.westernsydney.edu.au/search/name/Sandra Garrido/](https://directory.westernsydney.edu.au/search/name/Sandra%20Garrido/))

Description This unit advances the research methods and statistics in the prerequisite unit, Experimental Design and Analysis. It introduces students to non-experimental, correlational research design, and survey research, including questionnaire design, sampling and administration, with reference to ethics particularly related to cultural contexts and specific groups. Knowledge and skills in the construction and evaluation of psychological tests are also taught. Related correlational statistical techniques are taught, together with advanced analysis of variance, and instruction in the use of SPSS. The unit also develops skills in conducting and reporting psychological research and provides an introduction to qualitative research.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 2006

Equivalent Subjects MATH 3002 - Advanced Survey Design and Analysis

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Assumed Knowledge

Knowledge of experimental design, and basic quantitative analysis techniques up to and including one-way Analysis of Variance.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of non-experimental correlational research methodology, advanced experimental methodology and survey research techniques (APAC Graduate Attribute 1.1);
2. Demonstrate competence in writing survey questions, and designing survey questionnaires and understanding survey ethics (APAC GA 1.1 and 1.4)
3. Articulate principles of scale construction (APAC GA 1.1)
4. Demonstrate competence in correlational statistical techniques (APAC GA 1.1)
5. Demonstrate competence in advanced analysis techniques applicable to both experimental and non-experimental research methods (APAC GA 1.1);
6. Plan, conduct, and report non-experimental research (APAC GA 1.1).
7. Explain non-experimental correlational research methodology, advanced experimental methodology and survey research techniques
8. Demonstrate competence in writing survey questions, designing survey questionnaires and understanding survey ethics in various cultural contexts and with specific groups
9. Articulate principles of scale construction
10. Demonstrate competence in correlational statistical techniques
11. Demonstrate competence in advanced analysis techniques applicable to both experimental and non-experimental research methods
12. Plan, conduct, and report non-experimental research

Subject Content

Correlational (nonexperimental) research methodology

Survey research methodology

Questionnaire design

Scale construction

Reliability and validity of measuring instruments

Survey administration

Survey sampling

Statistical techniques appropriate to the analysis of nonexperimental research data: bivariate correlation and regression, multiple regression, factor analysis, reliability analysis, chi-square

Advanced analysis techniques: One-way ANOVA and Kruskal-Wallis nonparametric alternative, planned and post hoc comparisons, factorial ANOVA.

Correlational (non-experimental) research methodology;
 Survey research methodology;
 Questionnaire design;
 Scale construction;
 Reliability and validity of measuring instruments;
 Survey administration;
 Survey sampling;
 Ethics related to surveys in various cultural contexts and specific groups.
 Statistical techniques appropriate to the analysis of non-experimental research data: bivariate correlation and regression, multiple regression, factor analysis, reliability analysis, chi-square;
 Advanced analysis techniques: One-way ANOVA and Kruskal-Wallis nonparametric alternative, planned and post hoc comparisons, factorial ANOVA.
 Introduction to qualitative research.

BEHV 3007 Cognitive Processes

Credit Points 10

Legacy Code 101677

Coordinator Michael Tyler ([https://directory.westernsydney.edu.au/search/name/Michael Tyler/](https://directory.westernsydney.edu.au/search/name/Michael%20Tyler/))

Description Cognitive Processes is the study of the mental processes that underpin attention, perception, decision-making, language, and memory. Conceptual and research questions include: What are the structures and mechanisms of human memory? What processes underpin acquisition of language, and are the processes similar when we learn a second language? What factors affect attention? How do some people become expert problem solvers? Why do humans make irrational decisions? Contemporary theories will be discussed and evaluated. Investigative research methods including experiments, computer modelling, clinical case studies, and brain imaging are evaluated.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

BEHV 3009 Developmental Psychology

Credit Points 10

Legacy Code 101682

Coordinator Karen Mattock ([https://directory.westernsydney.edu.au/search/name/Karen Mattock/](https://directory.westernsydney.edu.au/search/name/Karen%20Mattock/))

Description Structured around an overview of lifespan development including diversity, this unit explores the holistic nature of growth and development through developmental theory and research. This unit highlights the interactive nature of three main areas of development: biological, cognitive, and psychosocial changes that affect the individual from conception to end of life. The unit encourages observation as a means for understanding development and promoting individual wellbeing. Indigenous Australian knowledges and perspectives are integrated into the unit alongside an appreciation of the richness of diverse cultural contexts.

School Psychology

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BEHV 1018

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Assumed Knowledge

Basic understanding of core concepts of personality, social and developmental psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Display an understanding of contemporary theories, principles, studies and methodologies used in the study of developmental psychology from conception to end of life.
2. Apply knowledge of the various developmental domains (cognitive, physical and social-emotional) and their interrelationships.
3. Demonstrate knowledge and understanding of conception to end of life in all its diversity, to the social, learning environment and apply this to psychological practice.
4. Employ, analyse and interpret various research methodologies in regard to the holistic development of the child, adolescent and adult considering relevant developmental theories and principles.
5. Evaluate matters related to child protection, including interprofessional perspectives, and impacts on development.
6. Evaluate developmental theories and practice approaches from cross-cultural and Indigenous Australian knowledges and perspectives.
7. Demonstrate creativity and reflexivity to critically analyse personally held values, feelings and attitudes.

Subject Content

Historical context and research methodologies in lifespan development
Biological basis of development
Physical and motor development through the life span

Physical development and ageing
 Perceptual and language development across the lifespan
 Cognitive development through the life span
 Moral development
 Early childhood and social emotional development: attachment and its significance in human development
 The self, personality and individual differences in development
 Social and emotional development across the lifespan
 Impact of child abuse and neglect ? the effects on physical, psychological and emotional development; promoting resilience; developing knowledge of child protection matters and mandatory reporting and interprofessional perspectives.
 Cross cultural and indigenous perspectives in lifespan development
 End of life issues-death dying and bereavement

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Critical Review	450-500 words	20	N	Individual
Report	2000-2500 words	40	N	Individual
Final Exam	1 hour	40	N	Individual

BEHV 3010 Health Psychology

Credit Points 10

Legacy Code 101193

Coordinator Tania Perich ([https://directory.westernsydney.edu.au/search/name/Tania Perich/](https://directory.westernsydney.edu.au/search/name/Tania%20Perich/))

Description Health Psychology is a branch of psychology concerned with the inter-relationship between psychological factors and physical health. It addresses such issues as the possible role of psychological characteristics in health maintenance and promotion, and in the development of illness. Other aspects include reactions to illness, the contribution of psychology to treatment, and explicit means by which health-relevant behaviours might be modified. This unit provides an introduction to Health Psychology and covers theoretical and research issues, the nature and management of stress and pain, issues concerning the receipt of health care and a selection of specific health problems.

School Psychology

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BEHV 1016 AND BEHV 1018

Equivalent Subjects LGYB 5004 - Health Psychology

Assumed Knowledge

Basic understanding of core concepts of personality, biological, social and developmental psychology and research methods is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise the basic principles, theories and methodologies of health psychology (APAC Graduate Attribute 1);
2. Evaluate psychological techniques relevant to the experience and management of health behaviours (APAC GA 3);
3. Apply knowledge of basic health psychology principles models and theories to a range of health and well-being issues (APAC GA 6);
4. Demonstrate skills in the critical evaluation of empirical literature and theoretical positions in health psychology (APAC GA 3);
5. Develop skills in the design and practice of conducting psychological research in the field of health psychology (APAC GA 2);
6. Demonstrate skills in critical written communication, teamwork and time management (APAC GA 5).

Subject Content

The nature and methods of studying health psychology and human behaviour in respect of health

Stress and health: Defining and measuring stress, understanding stress and illness and coping with stress
 Illness and help seeking behaviour
 Understanding pain
 Adhering to medical advice and compliance
 Investigating health Issues including reproductive health, mental health, chronic conditions, appetitive behaviours
 Health promotion

Assessment

BEHV 3011 History and Philosophy of Psychology

Credit Points 10

Legacy Code 100015

Coordinator Catherine O'Gorman ([https://directory.westernsydney.edu.au/search/name/Catherine O'Gorman/](https://directory.westernsydney.edu.au/search/name/Catherine%20OGorman/))

Description This unit provides an overview of the origins and historical development of psychology. It examines the major landmarks in the history of psychology, focusing on important individuals, schools

of thought, and recurrent ideas and themes. Historical conceptual problems are related to areas of controversy within contemporary psychology, and an insight is provided into the philosophical underpinnings of the various new movements and major theoretical conflicts within psychology today. The unit also provides a critical appraisal of psychology's status as a science, and explores the limits of psychological inquiry.

School Psychology

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BEHV 1016 AND BEHV 1018

Assumed Knowledge

Basic understanding of core concepts of personality, cognition, learning, perception, biological, social and developmental psychology and research methods is desirable

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Display basic knowledge of the historical and conceptual origins of psychology as a discipline, the major landmarks in the history of psychology, and the particular contributions made by various individuals and schools of thought or movements (APAC Graduate Attribute 1);
2. Apply knowledge of historical conceptual problems to contemporary problems in psychology (APAC GA 3);
3. Recognise the problems for psychology of some of its major concepts (such as: mind; behaviour; consciousness; meaning; values; theory; explanation; and so on) (APAC GA 3);
4. Demonstrate knowledge of the various arguments which have been presented in favour of (or against) certain kinds of psychological theory (APAC GA 3);
5. Evaluate the historical background and contemporary debates contributing to the great science/non-science divide in psychology, and the relationship of psychology to other disciplines (APAC GA 3);
6. Describe the interdependence of theory and practice in psychology, including the role of ethics, and the relationship between theory and practice in the scientist-practitioner model of psychological practice (APAC GA 3 and 4);

Subject Content

1. Introduction and major themes
2. Mind and reality in the classical world
3. Mind and reality in the medieval world and the renaissance
4. Descartes, dualism and rationalism
5. British Empiricism and Kant's response
6. The Darwinian revolution and William James's functionalism
7. The Freudian revolution
8. The behaviourist and cognitive revolutions
9. Psychology and 20th century philosophy of science
10. Recent challenges to traditional scientific psychology
11. Contemporary controversies and future directions

BEHV 3013 Humanities Internship

Credit Points 10

Legacy Code 100961

Coordinator Bridget Brooklyn ([https://directory.westernsydney.edu.au/search/name/Bridget Brooklyn/](https://directory.westernsydney.edu.au/search/name/Bridget%20Brooklyn/))

Description This unit aims to provide humanities students with first-hand knowledge of workplaces or research processes related to their chosen field of study (specialisation). Internships may be undertaken in organisations including Western Sydney University, historical societies, museums, libraries, local and state government, non-government organisations, tourism and administration. Internships may also take the form of an individual research project under the supervision of one or more academics. The internship can be in Australia or - through one of Western's partners such as CISAustralia - overseas. The unit will introduce students to various fields in which the skills and knowledge developed in their study of the humanities can be applied. It will augment their study and provide much needed work or research experience.

Equivalent Subjects LGYA 1894 - Art History Internship LGYB 0114 - History Internship LGYA 0506 - Asian and International Studies Internship LGYA 0906 - Cultural and Social Analysis Practicum

Restrictions Successful completion of 120 credit points of study in the currently enrolled program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Research workplace applications of knowledge and skills developed through study
2. Engage in current professional or research practice
3. Apply discipline specific skills and knowledge to workplace tasks
4. Reflect on the impact of the subject on their intellectual and professional development

Subject Content

1. Encounter a range of responsibilities and skills dependent on the place of their internship.
2. Gain working knowledge of organisations and/or businesses relevant to their area of study.
3. Observe work-place practices and the development of specific projects.
4. Learn about the duties of specific professions

5. Completion of a placement: minimum of 20 hours, maximum of 50 hours. Maximum hours may be extended at student's request.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BEHV 3014 Motivation and Emotion

Credit Points 10

Legacy Code 101678

Coordinator Martin Daly ([https://directory.westernsydney.edu.au/search/name/Martin Daly/](https://directory.westernsydney.edu.au/search/name/Martin%20Daly/))

Description The study of motivation and emotion explores the reasons behind people's behaviours, thoughts, and feelings. This unit examines core research and theory on motivational and emotional systems, exploring how these systems function in general and how that functioning varies due to gender, culture, and other sources of difference. Concepts of motivation and emotion are central to understanding human psychology. The unit positions the topic in relation to other areas of psychological theory (such as learning theory, social psychology, personality, and cognition), investigates its role in psychological practice, and addresses its impact upon practical and philosophical debates within the discipline. Students are encouraged to explore and reflect upon the role of motivational systems in their own lives.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BEHV 1016 AND BEHV 1018

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Assumed Knowledge

Basic understanding of core concepts of personality, learning theory, biological, social and developmental psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain the major concepts and key research findings in the study of motivation and emotion.
2. Evaluate psychological phenomena using motivational concepts and theories.
3. Differentiate biological and environmental factors behind individual variation in motivational functioning, including the roles of gender and culture.
4. Critique assumptions and perspectives on the role of motivation and emotion theory in controversial psychological debates.
5. Distinguish scientific evidence over opinion to explain and analyse human behaviour.
6. Reflect upon factors impacting one's own motivation, including the role of gender and cultural background.

Subject Content

1. Motivational systems:
 - Reflexes
 - Instincts
 - Sensory sensations
 - Drives
 - Arousal mechanisms
 - Basic emotions
 - Social emotions
2. Sources of relevance judgement
 - Evolutionary theory
 - Learning
 - Cognition
 - Decision making
3. Motivation and core psychological debates
 - The innate vs. acquired (nature/nurture) debate
 - The free-will vs. determinism debate
4. Application to practice:
 - Introduction to Applied Behaviour Analysis
 - Introduction to Cognitive Behavioural Therapy
 - Reflections on culture and gender

Assessment

BEHV 3015 Motor Control and Skill Acquisition

Credit Points 10

Legacy Code 400886

Coordinator Kylie Steel ([https://directory.westernsydney.edu.au/search/name/Kylie Steel/](https://directory.westernsydney.edu.au/search/name/Kylie%20Steel/))

Description Motor Control and Skill Acquisition is an investigation of the physiological and psychological processes involved in both the control and the learning of movement. As such, it considers the control mechanisms which are innate to the learner, how these mechanisms change by virtue of both maturation and experience, and how the latter type of changes may be facilitated by manipulation of the learning environment.

School Health Sciences

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects BEHV 2009 - Motor Control and Learning
SPRT 3002 - Aquatic Sports

Restrictions

Students must be enrolled in 4656 Bachelor of Health Science, 4658 Bachelor of Health Science (Sport and Exercise Science), 4659 Bachelor of Health Science (PDHPE), 4742 Bachelor of Health Science (Health and Physical Education) Pathway to Teaching (Secondary), 4747 - Bachelor of Health Science (Health and Physical Education) 6000 Diploma in Health Science/Bachelor of Health Science (Health and Physical Education) or 6001 Diploma in Health Science/Bachelor of Health Science (Health and Physical Education)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain and apply the different levels of analysis from which movement control and learning is studied.
2. Describe the biomechanical factors and neurophysiological basis which contribute to control of movement and learning.
3. Describe and evaluate the behavioural changes which accompany learning.
4. Analyse how the cognitive processes influence learning.
5. Evaluate how age and other individual differences impact on movement behaviour
6. Observe and apply classification taxonomies of the neuromuscular and psychological involvement in skills training and development of specific movement skills.
7. Critique experimental literature pertaining to Motor Learning and examine the applied principles which have been generated by this research.
8. Explain the reasoning for and perform discipline specific laboratory WH&S procedures and systems.

Subject Content

- The field of Study and levels of analysis.
- The contribution of The Skeletal system to movement control.
- The contribution of The Muscular system to movement control.
- The proprioceptors and The spinal reflexes.
- The vestibular system, posture and balance.
- The Visual system and movement control.
- motor control functions of The brain.
- The closed-loop model.
- The open-loop model.
- The concept of motor learning and its measurement.
- The learning process.
- The principles of practice.
- feedback and motor learning.
- individual differences and motor behaviour.
- motor development.

Legacy Code 101679

Coordinator Phoebe Bailey ([https://directory.westernsydney.edu.au/search/name/Phoebe Bailey/](https://directory.westernsydney.edu.au/search/name/Phoebe%20Bailey/))

Description In 2022 this unit replaced by BEHV 2018 - Personality. Personality is the study of the mental and behavioural factors on which individual human beings vary. In other words, the study of personality is the attempt to understand why a given individual is the way he/she is. This unit involves an examination of the major personality theories, applications to individual differences, and contemporary research. Emphasis is placed on a critical understanding of personality research and its implications for the practice of psychology.

BEHV 3018 Psychology and the Online World

Credit Points 10

Legacy Code 102350

Coordinator Craig Mcgarty ([https://directory.westernsydney.edu.au/search/name/Craig Mcgarty/](https://directory.westernsydney.edu.au/search/name/Craig%20Mcgarty/))

Description The world has seen an enormous explosion of activity that takes place in online environments that include the Internet, intranets, gaming platforms and peer to peer phone communication (e.g. SMS). There are wide ranging debates about the use and effects of online communication with concerns about hacking, trolling, bullying, scamming, online addiction appearing on a daily basis. Others celebrate the potential of the Internet to produce profound social change. Is the online world quite as bad or as good as it is made out to be? What are the psychological processes behind these and other online behaviours? Why not find out?

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BEHV 1018 AND BEHV 1016

Restrictions Students must be enrolled in the Bachelor of Cyber Security and Behaviour, Bachelor of Psychology, Bachelor of Psychology (Honours), Bachelor of Social Science (Psychology) or Bachelor of Communication, Bachelor of Arts and Diploma in Arts/ Bachelor of Arts programs with a major in Psychological Studies. Students enrolled in the Bachelor of Cyber Security and Behaviour must have successfully completed 70 credit points. Students enrolled in all other programs must have completed the two Level 1 pre-requisite subjects as stated above, as well as 30 credit points from the following Psychology Level 2 subjects: 101684 Brain and Behaviour, 100013 Experimental Design and Analysis, 101680 Perception, or 101676 Human Learning.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify instances of community concern or moral panic in relation to online activities. (Australian Psychological Accreditation Council ? APAC Graduate Competency 1.6)
2. Describe the debate over the facilitatory and inhibitory effects of online communication on collective action and protest. (APAC Graduate Competency 1.1)
3. Distinguish between forms of online anonymity and be aware of the risks and benefits of anonymity (APAC Graduate Competency 1.6)

4. Identify instances of risky or problematic forms of online conduct and be aware of explanations of the psychological drivers of such conduct. (APAC Graduate Competency 1.1)
5. Describe the potential and scope of online platforms for delivering psychological services and interventions. (APAC Graduate Competency 1.2)
6. Explain how psychological approaches can inform online safety (APAC Graduate Competency 1.2)
7. Identify instances of community concern or moral panic in relation to online activities. (Australian Psychological Accreditation Council ? APAC Graduate Attribute 3- Critical Thinking)
8. Describe the debate over the facilitatory and inhibitory effects of online communication on collective action and protest. (APAC Graduate Attribute 1- Core Knowledge)
9. Distinguish between forms of online anonymity and be aware of the risks and benefits of anonymity (APAC Graduate Attribute 3- Critical Thinking)
10. Identify instances of risky or problematic forms of online conduct and be aware of explanations of the psychological drivers of such conduct. (APAC Graduate Attribute 1- Core Knowledge)
11. Describe the potential and scope of online platforms for delivering psychological services. (APAC Graduate Attribute 5- Applying Psychology)
12. Explain how psychological approaches can inform online safety (APAC Graduate Attribute 5- Applying Psychology)

Subject Content

1. Introduction to subject and Cyberpsychology
2. Online Aggression: Flaming, Trolling, Cyberbullying and Cyberstalking.
3. Online Therapy and Support
4. Videogames for Training Skills and Changing Behaviour
5. Online Environments
6. Online Relationships
7. Online Learning and Motivation
8. Digital Addictions
9. Online Communities
10. Online Protest
11. Conspiracy Theories
12. Illicit Activities
13. Online Racism and Prejudice
 1. Applied Cyberpsychology
 2. Online relationships
 3. Collective action and protest
 4. Hacking, illicit activity, and the dark web
 5. Online aggression and cybersafety
 6. Online gaming and addiction
 7. Online gaming and behaviour change
 8. Predictors and consequences of online behaviour
 9. Online communities and the open Internet
 10. Learning online
 11. Online psychological therapy and support
 12. Conspiracy theories
 13. The online workplace

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Reflection	Minimum of one log entry for four weeks, approximately 1000 words	30	N	Individual
Critical review	1000 words	30	N	Individual
Exam	1 hour	40	N	Individual

BEHV 3019 Psychology of Language

Credit Points 10

Legacy Code 100023

Coordinator Liquan Liu ([https://directory.westernsydney.edu.au/search/name/Liquan Liu/](https://directory.westernsydney.edu.au/search/name/Liquan%20Liu/))

Description This unit acquaints students with major issues in the psychology of language. Through a series of online modules, it examines different approaches to research and theory on questions such as: the acquisition and development of language; the relationship between language and thought; bilingualism and multilingualism; speech perception and production; sign language; reading and writing; the neurophysiological underpinnings of language; patterns of language breakdown and communication disorders; social aspects of language; language in non-human animals. The tutorials take

a hands-on approach, where students learn new skills, such as reading and producing phonetic symbols, creating stimuli for use in psycholinguistic research, and analysing children's speech.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Restrictions Successful completion of 120 credit points.

Assumed Knowledge

Solid understanding of perception, cognitive processes, and experimental design and analysis in psychology and/or a solid understanding of linguistics and research methods in linguistics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify major issues, theories, and research findings in psychology of language (APAC Graduate Attribute 1).
2. Critically evaluate the various theories that have been proposed in a sub-topic of psychology of language (APAC GA 3).
3. Use principles of experimental psychology and/or knowledge of major issues, theories, and research findings in psychology of language to create a research proposal or critical essay in a sub-topic of psychology of language (APAC GA 6).
4. Create stimuli for an experiment in psychology of language (APAC GA 2 and 5).
5. Analyse spoken language using phonemic transcription.

Subject Content

This subject acquaints students with major issues in the psychology of language. All students will complete a set of core modules:

- 1.???? What is language?
- 2.???? How is language described?
- 3.???? How does language relate to psychology?

This will be followed by an opportunity for students pursue study in a range of subtopic areas. A subset of modules will be offered each year, in topics such as:

- 1.?????? The social basis of language
- 2.?????? The biological basis of language
- 3.?????? Bilingualism
- 4.?????? Second language acquisition
- 5.?????? Sign language
- 6.?????? Perception of speech
- 7.?????? Spoken word recognition
- 8.?????? Production of speech
- 9.?????? Reading and spelling
- 10.???? Visual word recognition
- 11.???? Writing
- 12.???? Comprehension
- 13.???? Language development
- 14.???? Language disorders
- 15.???? Language testing
- 16.???? The relationship between language and thought
- 17.???? Can non-human animals learn language?
- 18.???? Understanding the structure of sentences
- 19.???? Semantic processing

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are

regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Proposal	1 500 words	35	N	Individual
Report	500 words + stimulus item submission	20	N	Individual
Final Exam	2 hours	45	N	Individual

BEHV 3021 Psychology, Crime and Law

Credit Points 10

Legacy Code 102399

Coordinator Kiley Seymour ([https://directory.westernsydney.edu.au/search/name/Kiley Seymour/](https://directory.westernsydney.edu.au/search/name/Kiley%20Seymour/))

Description This unit covers a broad spectrum of issues relevant to legal and forensic psychology. How accurate is a witness's memory? How good are we at identifying a suspect in a line-up? Why do people confess to crimes they never committed? What are good interviewing and interrogation techniques for understanding the truth? How accurate are repressed memories, and how are false memories implanted?

School Psychology

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Restrictions Students must be enrolled in one of the following programs: 1793 Bachelor of Science, Criminology and Psychological Studies, 1834 Bachelor of Psychology, 1711 Bachelor of Social

Sciences (Psychology) or 1865 Bachelor of Psychology (Honours). For program 1793 Bachelor of Science, Criminology and Psychological Studies students must have successfully completed 140 credit points and 102223 Investigating Psychology B OR 140 credit points and 101183 Psychology: Behavioural Science and 100013 Experimental Design and Analysis before enrolling in this subject. For program 1834 Bachelor of Psychology, 1711 Bachelor of Social Sciences (Psychology) & 1865 Bachelor of Psychology (Honours) students must have successfully completed 101183 Psychology: Behavioral Science and 100013 Experimental Design and Analysis before enrolling in this subject.

Assumed Knowledge

Introductory knowledge of Psychology, statistics, and research methods.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe key concepts theories, studies, methods and debates within criminal and forensic Psychology;
2. Analyse the theoretical issues in memory distortion;
3. Summarise the theory and history of repressed memories;
4. Outline the dangers of memory retrieval practices;
5. Assess the politics of false memories and repression;
6. Critique the impact of repressed and recovered memory theory on the legal system and in clinical practice;
7. Identify the principles and theories of clinical forensic psychology.

Subject Content

Refresher/Introduction to Memory Research
Remembering What Never Happened: The Myth of Repression
Wrongful Convictions
Eyewitness Identification
Eyewitness Testimony
The Cognitive Interview Technique
Remembering Trauma
Suspect Interrogations
Introduction to Clinical Forensic Psychology

Assessment

BEHV 3023 Social Psychology

Credit Points 10

Legacy Code 101683

Coordinator Craig Mcgarty ([https://directory.westernsydney.edu.au/search/name/Craig Mcgarty/](https://directory.westernsydney.edu.au/search/name/Craig%20Mcgarty/))

Description Social psychology is the study of human behaviour and mental processes in their social context. Social psychology examines social behaviour and social thinking using scientific psychological research methods. This unit considers both classic and recent theories, research and applications in core areas of social psychology such as: attitudes, stereotyping and prejudice, social cognition, group processes, cross-cultural and Indigenous Australian psychology, and social influence. Emphasis is placed upon the role of contemporary research and theory in increasing our understanding of social phenomena and the relevance of this to everyday life.

Equivalent Subjects BEHV 2013 - Social and Developmental Psychology

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

The online version of this subject is only available to students enrolled in 1793 Bachelor of Science, Criminology and Psychological Studies.

Assumed Knowledge

Basic understanding of core concepts of personality, social and developmental psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Display knowledge of contemporary theories and methodologies used in the study of social cognition and social behaviour, and explain a broad range of psychological research studies relevant to social behaviour and cognition.
2. Evaluate social psychology theories from cross-cultural and Indigenous Australian perspectives.
3. Apply knowledge of psychological principles and research methodologies to the study of social behaviour and cognition.
4. Critically evaluate empirical studies and theoretical positions in social psychology.

5. Communicate the results and methods of social psychological research using APA structure and formatting conventions.
6. Apply social psychological concepts to real-life events.

BEHV 3025 Sport and Exercise Psychology

Credit Points 10

Legacy Code 401055

Coordinator Rhiannon White ([https://directory.westernsydney.edu.au/search/name/Rhiannon White/](https://directory.westernsydney.edu.au/search/name/Rhiannon%20White/))

Description This unit explores psychological factors that affect sport performance (e.g., self-efficacy and concentration), psychological factors that predict and increase participation in physical activity (e.g., motivation), and psychological outcomes of physical activity (e.g., mental health, resilience, and cognitive development). Students will examine theory and research and draw upon their own experiences, to apply sport and exercise psychology principles to a variety of real-world scenarios, and design strategies relevant to different contexts such as physical education, personal training, exercise physiology, coaching, and health promotion.

School Health Sciences

Discipline Psychology

Student Contribution Band HECS Band 4 10cp

BEHV 3026 Service Learning

Credit Points 10

Legacy Code 102740

Coordinator Bridget Brooklyn ([https://directory.westernsydney.edu.au/search/name/Bridget Brooklyn/](https://directory.westernsydney.edu.au/search/name/Bridget%20Brooklyn/))

Description In this unit, the learning experience combines civic engagement with training, and personal and scholarly reflection. Service learning focuses on the application and development of a broad range of knowledges, capacities and skills in the context of voluntary effort to benefit the community. For example, depending on the site selected, students may: extend their capacity to communicate and work effectively in culturally diverse contexts; gain a better understanding of social inclusion and exclusion in Australia or overseas, or; become more confident about their personal and professional capacity to contribute to the well-being of others or protection of the natural environment. The unit may be taken in Australia or overseas - through one of Western's Partners such as CISAustralia - completed individually or as part of a group and in any session of study. For further information please contact the unit coordinator.

Restrictions

Students must be enrolled in one of the following programs: 1651 - Bachelor of Arts (Pathway to Teaching Primary), 1652 - Bachelor of Arts (Pathway to Teaching Secondary), 1655 - Bachelor of Arts (Dean's Scholars), 1706 - Bachelor of Arts, 1739 - Bachelor of International Studies (Dean's Scholars), 1822 - Bachelor of Arts (Pathway to Teaching Primary) Dean's Scholars, 1823 - Bachelor of Arts (Pathway to Teaching Secondary) Dean's Scholars, 1658 - Bachelor of International Studies, 6005 - Diploma in Arts/Bachelor of Arts, 6019 - Diploma in Arts/Bachelor of Arts (Pathway to Teaching Primary), 6021 - Diploma in Arts/Bachelor of Arts (Pathway to Teaching Secondary). Successful completion of 60 credit points in currently enrolled program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the personal and professional skills required in volunteering.
2. Discuss the historical and contemporary significance of volunteering as a form of civic engagement.
3. Reflect on the personal and organizational challenges and benefits of volunteering.
4. Discuss the contribution of civic engagement to a diverse, sustainable and inclusive society.
5. Explain how your experience as a volunteer has enhanced your personal development and professional profile.

Subject Content

1. Determination of an appropriate placement in conjunction with an Unit Coordinator.
2. Preparation of a proposal
3. Participation in training either at the placement organisation or, if not provided there, through the NSW Centre of Volunteering (2 hours, run weekly)
4. Completion of a placement: minimum of 20 hours, maximum of 50 hours. Maximum hours may be extended at student's request

BEHV 4001 Advanced Topics in Psychology

Credit Points 10

Legacy Code 101541

Coordinator Ahmed Moustafa ([https://directory.westernsydney.edu.au/search/name/Ahmed Moustafa/](https://directory.westernsydney.edu.au/search/name/Ahmed%20Moustafa/))

Description In 2022 this unit replaced by 102907 - Advanced Topics in Contemporary Psychology. In this unit students develop an advanced level of theoretical and empirical knowledge in selected core topics of psychology, an awareness of how this knowledge underpins evidence-based approaches to psychological intervention, and an enhanced capacity for conducting research in selected topic areas. The unit fosters an appreciation of psychology as a scientific discipline, and of how sound research provides the foundation for solving problems of human mental processes and behaviour. Skills in the critical evaluation of knowledge and research are developed.

This subject is restricted to students enrolled in programs: 1796 Graduate Diploma in Psychology, 1865 Bachelor of Psychology (Honours), 1860 Bachelor of Psychological Studies (Honours), 1905 Bachelor of Psychological Science (Honours), 1504 Bachelor of Arts (Honours) Psychology, 1500 Bachelor of Psychology (continuing)

who have successfully completed 240 credit points including the 160 credit point core sequence in Psychology, 1834 Bachelor of Psychology (current) who have successfully completed 240 credit points including the 120 credit point core sequence in Psychology and the 40 credit point Psychology Extension sub-major.

Assumed Knowledge

Students must have completed an accredited three-year sequence in psychology, or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply advanced bibliographic and information literacy skills to locate and select literature appropriate to a chosen and research topic.
2. Apply conceptual skills to formulate and justify a research proposal.
3. Demonstrate comprehensive knowledge and application skills associated with a chosen, relevant research method.
4. Adhere to the ethical processes and guidelines of the research institution the conduct and reporting of research.
5. Accurately apply appropriate methods of data analysis to research data.
6. Demonstrate rigor in drawing and defending conclusions from research findings in a coherently written research thesis.

Subject Content

Completion of a research Thesis relevant to the field of psychology based on a rigorous design and scrutinized proposal. Under supervision, an individual student will perform a literature search of their research topic, develop a research design, develop research procedures, make observations, collect and analyse the data and write a thesis on the study.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Literature Review	2,000 words	S/U	Y	Individual
Thesis	6,000-7,000 words	100	N	Individual

BEHV 4005 Theory and Practice of Psychological Assessment and Intervention

Credit Points 10

Legacy Code 101420

Coordinator Quincy Wong ([https://directory.westernsydney.edu.au/search/name/Quincy Wong/](https://directory.westernsydney.edu.au/search/name/Quincy%20Wong/))

Description This unit has been designed to introduce students to psychological assessment by providing practical and theoretical input regarding the administration, scoring, and interpretation of frequently used standardised measures. The scientific and ethical underpinnings of psychological testing and assessment are introduced providing a general context for the employment of standardised psychological tests. Emphasis will then be placed on familiarisation with i) the processes that practitioners go through during a testing session and ii) current research on employing the standardised tests presented in this unit. Students will practise with testing data, reporting

results in compliance with American Psychological Association (APA) conventions.

School Psychology

Restrictions

Students must be enrolled in programs 1796 Graduate Diploma of Psychology, 1865 Bachelor of Psychology (Honours), 1860 Bachelor of Psychological Studies (Honours), 1905 Bachelor of Psychological Science (Honours), 1504 Bachelor of Arts (Psychology) Honours, or 1500/1834 Bachelor of Psychology. Students enrolled in 1500/1834 Bachelor of Psychology must have successfully completed 240 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain commonly used psychological assessment instruments, their theoretical foundations and make basic interpretations of results.
2. Analyse and evaluate the underlying theoretical principles for the treatment of common mental disorders such as anxiety disorders and depression.
3. Apply cognitive and behavioural theory-based interventions for common mental health problems such as anxiety and depression.
4. Effectively communicate in writing the results of a psychological assessment using formal report structure.
5. Effectively present the results of a psychological assessment in different contexts, including cross-disciplinary team settings.

BEHV 4006 Research Methods Seminar

Credit Points 10

Legacy Code 100983

Coordinator Emilee Gilbert ([https://directory.westernsydney.edu.au/search/name/Emilee Gilbert/](https://directory.westernsydney.edu.au/search/name/Emilee%20Gilbert/))

Description This is a 20 credit point year-long subject taken over two terms (10 credit points in each term). The aim of this subject is to advance students' awareness, and critical appreciation of interrelated research processes: epistemological frameworks of research; the appropriate interpretation of research data; ethical issues in the conduct of research; the cultural, social, economic, and political contexts of research; and Indigenous Australian knowledges and research practices. Skills will be consolidated in the use of quantitative and qualitative research designs, methods, and analysis techniques to address research questions in psychology and the behavioural sciences.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 4 subject

Equivalent Subjects BEHV 4002 - Empirical Research Methods Seminar

Restrictions

Students must be enrolled in programs 1796 Graduate Diploma of Psychology, 1865 Bachelor of Psychology (Honours), 1860 Bachelor of Psychological Studies (Honours), 1905 Bachelor of Psychological Science (Honours), 1504 Bachelor of Arts (Psychology) Honours, or 1500/1834 Bachelor of Psychology. Students enrolled in 1500/1834 Bachelor of Psychology or 1865 Bachelor of Psychology (Honours) must have successfully completed 240 credit points.

Assumed Knowledge

Undergraduate subjects in research methods for psychology including an advanced research methods subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Characterise and critique the philosophical and methodological differences between qualitative and quantitative research
2. Accurately apply qualitative methods and analysis techniques to psychological data
3. Accurately apply multivariate quantitative techniques to psychological data using SPSS/PASW analysis software
4. Discriminate between epistemological positions in psychology and describe their alignment to methodological approaches
5. Evaluate and propose ethical research approaches in cultural, social, economic, and political contexts, including from Indigenous Australian perspectives
6. Synthesise and communicate research processes and findings in written reports according to the guidelines of the Publication Manual of the American Psychological Association

Subject Content

The research process

Ontological and epistemological bases of different approaches to research

Interpreting research data and research results

Overview of qualitative research methods, with the option for advanced instruction in selected methods (e.g., discourse analysis)

Overview of quantitative research methods, with options for advanced instruction of selected methods (e.g., factor analysis)

Statistical significance, effect size, and power analysis

Ethical issues in research

The social, economic, and political context of research, including the professional responsibilities of researchers

Communicating research: writing research proposals, theses, dissertations, and journal articles.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BEHV 4009 Advanced Topics in Contemporary Psychology

Credit Points 10

Legacy Code 102907

Coordinator Steve Cumming ([https://directory.westernsydney.edu.au/search/name/Steve Cumming/](https://directory.westernsydney.edu.au/search/name/Steve%20Cumming/))

Description Psychological research and practice exist in a cultural, historical and social context. This unit provides students with knowledge and skills for working in Psychology in the complex, unpredictable and diverse contemporary Australian society. In this unit students develop an advanced level of theoretical and empirical knowledge in selected topics of psychology, an awareness of how this

knowledge underpins evidence-based approaches to psychological intervention, and an enhanced capacity for conducting research in selected topic areas. The unit fosters an appreciation of psychology as a scientific discipline and the interplay between psychological research and real-world psychology practice.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 4 subject

Equivalent Subjects BEHV 4001 - Advanced Topics in Psychology

Restrictions

Students must be enrolled in programs 1796 Graduate Diploma of Psychology, 1865 Bachelor of Psychology (Honours), 1860 Bachelor of Psychological Studies (Honours), 1504 Bachelor of Arts (Psychology) Honours, 1500/1834 Bachelor of Psychology, or 1905 Bachelor of Psychological Science (Honours). Students enrolled in 1500/1834 Bachelor of Psychology must have successfully completed 240 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate advanced theoretical and empirical psychological knowledge in core areas of the discipline,
2. Reflect on their own knowledge of core areas of contemporary psychology.
3. Complete a project to address self-identified gaps in their skills and knowledge in contemporary Psychology
4. Communicate advanced psychological principles, ideas, and research findings clearly and concisely in varied contexts, including interprofessional.
5. Explain how to extend the boundaries of psychological knowledge through research.
6. Critically evaluate the knowledge derived from published psychological research, and use appropriate judgement in the interpretation and application of that research.

Subject Content

The subject consists of modules on advanced areas of psychology that reflect the need for psychologists to adapt to the changing social and professional environment in which they work.

The subject will cover

- Multidisciplinary health care teamwork
- Sexualities and gender identity
- Indigenous psychology
- Multicultural and multilingual settings
- Therapy modes- such as bibliotherapy, telehealth, blended modes
- The psychology of ageing
- Environmental and political psychology

BEHV 7001 Advanced Therapeutic Modalities

Credit Points 10

Legacy Code 102361

Coordinator Evelyn Smith ([https://directory.westernsydney.edu.au/search/name/Evelyn Smith/](https://directory.westernsydney.edu.au/search/name/Evelyn%20Smith/))

Description This unit follows from 102360 Core Therapeutic Modalities. Students in this unit will develop foundational skills in assessment, case formulation and treatment planning through understanding and developing skills in further evidence-based psychological therapies that may be modified based on an evolving case formulation and evaluation and tailored to the client as appropriate to their wider social and cultural context. Further, students will be guided in critical examination of similarities and differences across those therapeutic approaches and their application across conditions, populations, settings and cultural contexts. Please note: some of the activities in this unit may include experiential learning, for example where students may be asked to take on the client role using their own lived experience, to provide opportunity for training in therapeutic modalities that are more "real life". Students may opt-out of these activities without consequence

through speaking to the unit coordinator and alternative arrangements for student learning opportunities will be organised.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7015 AND BEHV 7029

Restrictions

Students must be enrolled in 1814 Master of Professional Psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate knowledge and skills in evidence-based psychological interventions and ways to tailor these to the unique attributes of the person within their wider context and evaluate therapeutic outcomes (APAC GA: 3.7)
2. Apply therapeutic interventions and demonstrate skill in reflecting on practice and identifying areas for improvement. (APAC GA: 3.2, 3.6, 3.9, 3.12 & 3.15)
3. Critically evaluate similarities and differences of therapeutic modalities covered in the subject (APAC GA: 3.9)
4. Based on psychological assessment and formulation, appropriately select therapeutic modalities across diverse settings and cultural contexts and communicate these in a case report (APAC GA: 3.2., 3.3 & 3.8)

Subject Content

Theoretical and empirical foundations of Narrative therapy (NT)
NT assessment, case formulation and application to select psychological problems

Theoretical and empirical foundations of Motivational Interviewing (MI)
MI therapeutic tools and application to select psychological problems

Theoretical and empirical foundations of Acceptance and Commitment therapy (ACT)

ACT assessment, case formulation and application to select psychological problems

Introduction to Schema therapy: theoretical and empirical foundations, approach and application

Introduction to Solution Focused Brief therapy: theoretical foundation, approach and application

Introduction to Emotion Focused therapy: theoretical foundation approach and application

Introduction to Group therapy: approach, skills and context

Evidence-based therapeutic modalities selection across diverse settings and cultural contexts

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Practical: Motivational interviewing therapy intervention	30 minutes	30	Y	Individual
Practical: Acceptance and Commitment Therapy (ACT) or Narrative therapy intervention	30 minutes	30	Y	Individual
Report	2000 words	40	Y	Individual

BEHV 7003 Assessment: Cognitive Functions

Credit Points 10

Legacy Code 102400

Coordinator Evelyn Smith ([https://directory.westernsydney.edu.au/search/name/Evelyn Smith/](https://directory.westernsydney.edu.au/search/name/Evelyn%20Smith/))

Description This unit provides a comprehensive introduction to the cognitive psychological assessment of children, adolescents and adults. It is designed to assist students in the professional psychology programs to develop theoretical knowledge and practical skills in the cognitive assessment of clients. Students will become familiar with the current theoretical and empirical foundations of psychological assessment, and the application of these theories and research findings to assessment practice in empirically valid and culturally responsive ways. Students will be introduced to contemporary practice in the assessment of cognition, personality and behaviour. Training in the administration of key instruments will be provided. Students will be instructed in the integration of assessment data into clinically-useful reports, including inter-disciplinary communication. Different approaches to psychological assessment will be compared and evaluated. Ethical and professional issues in psychological assessment will be discussed.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects BEHV 7026 - Psychological Assessment LGYA 1196 - Psychological Assessment 1

Restrictions

Students must be enrolled in 1812 Master of Clinical Psychology or 1814 Master of Professional Psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

- Define the theoretical and empirical foundations of psychological assessment (APAC GA: 3.2, 3.16, 4.2.1ii)
- Critically evaluate psychological tests, including their application in culturally responsive ways (APAC GA: 3.2, 3.16, 4.2.1ii)
- Examine ethical issues in psychological assessment (APAC GA: 3.12)
- Show knowledge in appropriate selection of assessment methods and measures (APAC GA: 3.4, 3.6, 4.2.2ii)
- Demonstrate skills in conducting and interpreting major measures of child and adult intelligence, achievement and other cognitive domains (APAC GA: 3.4, 3.6, 3.14, 3.15, 4.2.2ii)
- Formulate and appropriately communicate assessment results to clients and other professionals (APAC GA: 3.8, 3.10, 4.2.2iii)

Subject Content

Theories, models and methods in psychological assessment
Intelligence and cognitive systems

Intellectual assessment: WAIS-IV, WISC-IV and other test batteries
Assessment of academic achievement: WIAT-II, NARA-III and other measures

Assessment of language, memory and other cognitive functions: WMS-IV, CELF-4 and other measures

Assessment of behaviour, emotion, and personality (NEO-PI and other measures)

Observational methods

Psychometric principles and methods

Developmental and acquired cognitive disorders

Report writing

Professional and ethical issues in assessment, including application of psychological testing and assessment in culturally responsive ways.

BEHV 7004 Assessment: Psychological Practice

Credit Points 10

Legacy Code 102359

Coordinator Janet Conti ([https://directory.westernsydney.edu.au/search/name/Janet Conti/](https://directory.westernsydney.edu.au/search/name/Janet%20Conti/))

Description This unit will provide students with the skills to psychologically assess and diagnose a range of psychological disorders in adults and in children that are presented in psychological practice. This unit will be complemented by 102400 Assessment: Cognitive Functions in the second semester which will focus more on cognitive assessments. Upon completion of this unit, students will have an understanding of a range of assessment tools, their psychometric qualities, application and utility in a psychological practice. They will also develop skills in applying and interpreting assessment tools and how those tools may aid diagnostic and therapeutic processes.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Restricted to Postgraduate students with an APAC accredited 4 year psychology sequence.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define the principle of clinical assessment.
2. Demonstrate knowledge and understanding of assessment application at diagnostic and therapeutic levels.
3. Compare a range of different assessment tools, their psychometric properties and application
4. Apply knowledge of assessment tools across a range of diagnostic and therapeutic contexts
5. Demonstrate skills in conducting and interpreting assessment.
6. Formulate and appropriately communicate assessment results to clients and other professionals.

Subject Content

Principles of Clinical Assessment
 Assessing Mood Disorders and Self-Harm Risk
 Assessing Anxiety Disorders
 Assessing Child Behavioural and Emotional Functioning
 Assessing OCD and Related Disorders
 Assessing Personality and Aptitudes
 Assessing Chronic Pain and Physical Disability
 Assessing Trauma & Related Disorders

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task

Equivalent Subjects LGYA 0486 - Clinical Problems in Children and Adolescents BEHV 7004 - Assessment Psychological Practice

Restrictions

Students must be enrolled in programs 1812 Master of Clinical Psychology or 1814 Master of Professional Psychology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the characteristics of the common emotional and behavioural disorders in childhood and adolescence (APAC GA: 3.5, 4.2.1i, 4.2.1ii, 4.2.1iii & 4.2.2i).
2. Apply reliable and valid and culturally responsive methods of assessing and writing reports for children and adolescents with psychological disorders (APAC GA: 3.2, 3.6, 3.8, 4.2.1iii, 4.2.2ii, 4.2.2iii).
3. Implement and evaluate psychological interventions, including cognitive and behavioural therapies, for a range of emotional and behavioural disorders in childhood and adolescence reflecting upon the appropriate treatment modifications required for each clinical population and including working with the unique attributes of the person within their cultural context (including with Aboriginal and Torres Strait Islander Australians) (APAC GA: 3.2, 3.7, 4.2.2ii, 4.2.2iv, 4.2.3i & 4.2.3ii).
4. Critically evaluate research concerning the efficacy of psychological therapies with children and adolescents (APAC GA: 3.16 & 4.2.3iv).
5. Demonstrate an applied understanding of the role of a psychologist in an inter-professional context in the assessment and treatment of child and adolescent clinical presentations (APAC GA: 3.10, 3.12 & 4.2.3iii).

Subject Content

Theoretical and empirical foundations of child psychopathology
 Assessment of psychopathology in childhood
 Nature and epidemiology of common childhood disorders
 The development, implementation and evaluation of psychological interventions, including cognitive and behavioural therapies, for a range of psychological disorders in childhood and adolescence.
 Cultural responsiveness in psychological assessment and interventions with children and families, including with Aboriginal and Torres Strait Islander Australians.
 The role and contribution of a psychologist within an inter-professional treatment context.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Critical Review: Analysis of case scenario and treatment options that includes the role of the psychologist in an inter-professional context	2,500 words	50	Y	Individual

Case Study:	1,500 words	50	Y	Individual
Culturally responsive Clinical Interview, Assessment and Intervention Plan

BEHV 7006 Clinic Placement A

Credit Points 10

Legacy Code 101815

Coordinator Karen Moses ([https://directory.westernsydney.edu.au/search/name/Karen Moses/](https://directory.westernsydney.edu.au/search/name/Karen%20Moses/))

Description This introductory placement unit comprises 180 hours of placement activity accrued one-day a week over 24 weeks and is designed to allow students to apply the theoretical knowledge they have gained in the following coursework units, Core Skills & Ethical Practice; Psychological Assessment; Psychopathology: Theory and Practice and Psychological Interventions 1. The aim of the unit is to establish and enhance, under close supervision, a range of clinical psychology assessment and intervention skills applied to real clients. Regular and systematic video-recording of trainee-client sessions and supervisor feedback guided by competency-based principles provide trainees with an excellent opportunity to acquire, consolidate and generalise a wide range of competencies important for clinical psychology practice.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7014 AND
BEHV 7003 AND
BEHV 7029 AND
BEHV 7027

Co-requisite(s) BEHV 7005

Restrictions

Students must be enrolled in program 1812 - Master of Clinical Psychology.

Assumed Knowledge

Theoretical knowledge and skills of ethical professional practice, psychopathology, and psychological interventions.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate core evidence-based clinical psychology assessment and formulation competencies at an advanced-beginner level for common psychological problems, including with culturally diverse and indigenous populations (APAC GA: 3.2, 3.3, 3.4, 3.5, 3.6, 3.8, 3.9, 4.2.1i, ii, iii, 4.2.2 I, ii, iii & 4.2.3iv).
2. Demonstrate core evidence-based clinical psychology intervention competencies at an advanced-beginner level for common psychological problems, including with culturally diverse / indigenous populations and with consideration to the context in which a client lives (APAC GA: 3.2, 3.3, 3.7, 3.8, 3.9, 4.2.2iv & 4.2.3 i, ii, iv).
3. Display therapist-client and supervisee-supervisor relationship competencies at an advanced-beginner level (APAC GA: 3.10, 3.11, 3.12, 4.2.3iii).
4. Demonstrate professionalism, professional communication competencies, ethical judgment and ethical conduct in accordance with the Code of Conduct endorsed by the Psychology Board of Australia and meet all of the program inherent requirements. This includes professional engagement with and showing respect for the skills and contributions of other involved professionals (APAC GA: 3.3, 3.8, 3.9, 3.10, 3.11, 3.12, 3.13, 4.2.3iii).
5. Demonstrate scientist-practitioner and reflective practitioner meta-competencies at the beginner level. This includes evaluating the effectiveness of own practice and making changes as required (APAC GA: 3.11, 3.14 & 3.15).
6. Comply with accreditation requirements concerning practicum, casework and supervision hours (APAC GA: 3.2-3.15, 4.2.1, 4.2.2, 4.2.3).

Subject Content

Supervised placement in the Western Sydney University Psychology Clinics.

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and complete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- <http://training.gov.au> (<http://training.gov.au>)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BEHV 7008 Clinical Health Psychology

Credit Points 10

Legacy Code 101220

Coordinator Janet Conti ([https://directory.westernsydney.edu.au/search/name/Janet Conti/](https://directory.westernsydney.edu.au/search/name/Janet%20Conti/))

Description In this unit students acquire an understanding of how biological, psychological, social factors interact in health and illness, and how the principles of biopsychosocial models of health inform clinical psychology intervention strategies that can be applied to the management of physical disorders. This unit will cover psychological assessment, formulation that integrates medicine and psychology, clinical health psychology treatments and assessment of their outcomes. Given that comorbidity has an impact on health outcomes, psychological practice when working with co-morbid substance use disorders will also be addressed. Practice within this branch of clinical psychology requires working within inter-disciplinary treatment contexts that include medical interventions and the tailoring of psychological interventions to help manage a medical condition and enhance quality of life. The unit includes culturally responsive attitudes and skills in clinical health psychology practice, including when working with Aboriginal and Torres Strait Islander Australians.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7027 AND BEHV 7029

Equivalent Subjects LGYB 5193 - Clinical Health Psychology BEHV 7011 - Clinical Psychopathology 2

Restrictions

Students must be enrolled in 1546 Master of Psychology (Clinical Psychology) or 1812 Master of Clinical Psychology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply evidence-based practice in clinical health psychology that integrates empirically supported psychological treatments with consideration of the client's health, illness and wider social and cultural contexts (APAC GA: 3.2, 3.16, 4.2.1i & 4.2.1ii, 4.2.3iv).
2. Outline the characteristics of a range of effective psychological treatments for complex and comorbid presentations (APAC GA: 3.2, 4.2.2iii).
3. Compare and contrast the assessment, planning, implementation, tailoring and evaluation of outcomes of psychological treatments of these disorders with diverse client groups, including working with the unique attributes of the person within their family, health and cultural context, including from multicultural and Aboriginal and Torres Strait Islander contexts (APAC GA: 3.2, 3.7, 4.2.2iii & iv & 4.2.3ii).
4. Articulate the importance of the contributions of a multidisciplinary teams and interventions (including pharmacological) to treatment plans development and implementation and communication within an inter-professional context (APAC GA: 3.10, 3.12, 4.2.1iv, 4.2.2ii & 4.2.3iii).
5. Implement a psychological intervention for a client for a range of specific clinical populations, reflecting upon the appropriate treatment modifications required for each population and their own emerging practice in clinical health psychology contexts (APAC GA: 3.2, 3.3, 3.9, 3.14, 3.15 & 4.2.3i).
6. Demonstrate competency in MI-MAP case formulation skills and therapeutic skills in one psychological intervention (APAC GA: 3.7, 3.14, 3.15 & 4.2.3i).

Subject Content

Integrating medicine, other disciplines and psychology: formulation framework for clinical health psychology
 Transdiagnostic and e-mental health treatment for chronic health conditions
 Psychoneuroimmunology and health models
 Models of adjustment and complicated grief in living with chronic and life-threatening illness
 Therapeutic modalities (Motivational Interviewing, Problem Solving Therapy)
 Psychological interventions for co-morbid presentations, including substance use disorders
 Pain mechanisms and management
 Acute and chronic health conditions (e.g., spinal cord injury, stroke, multiple sclerosis; asthma; diabetes; arthritis, obesity, cardiovascular disease)
 Clinical Health Psychology practice within a range of cultural contexts, including when working with Aboriginal and Torres Strait Islander Australians

BEHV 7009 Clinical Neuropsychology and Psychopharmacology

Credit Points 10

Legacy Code 101817

Coordinator Travis Wearne ([https://directory.westernsydney.edu.au/search/name/Travis Wearne/](https://directory.westernsydney.edu.au/search/name/Travis%20Wearne/))

Description This unit provides a comprehensive grounding in contemporary neuropsychological theories, methods and measures, including understanding of neurocognitive disorders. The nature of the cognitive systems involved in attention, memory, language, spatial processing, and executive functions will be reviewed, with discussion of the neuropsychological assessment of each of these systems. The unit also includes coverage of the classification, use and efficacy of common psychopharmacological agents. The unit will stress the importance of neural abnormalities in patients, and how these are related to symptoms and behavioural dysfunction. Working within inter-disciplinary contexts that include psychological, pharmacological and surgical treatments for neuropsychological disorders will also be discussed.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7003

Equivalent Subjects LGYA 1205 - Clinical and Forensic Neuropsychology

Restrictions

Students must be enrolled in 1546 Master of Psychology (Clinical Psychology) or 1812 Master of Clinical Psychology or 8108 Doctor of Philosophy/Master of Clinical Psychology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Draw from appropriate theory to analyse the neuropsychology of neurocognitive disorders (APAC GA: 3.2, 3.5, 4.2.1i, ii & iii, & 4.2.2i).
2. Demonstrate evidence-based practice skills in neuropsychological assessment and treatment formulation, including in the context of inter-disciplinary interventions (APAC GA: 3.5, 3.6, 4.2.2ii, 4.2.2iii, & 4.2.3iii).
3. Classify and explain the mechanisms of psychoactive drug action (APAC GA: 4.2.1iv).
4. Characterise and explain the common psychopharmacological treatments (APAC GA: 4.2.1iv).
5. Demonstrate applied understanding and competency in the delivery of at least one specific neurocognitive assessment measure (APAC GA: 3.4, 3.6, 4.2.2ii & 4.2.2iii).

Subject Content

1. Neuroanatomy for Clinical Psychologists
2. Neuropsychological Assessment (Neuropsychological Methods, Screening & Interdisciplinary Practice)
3. Disorders of Executive Control, Social Cognition & Emotion Dysregulation
4. Alcohol & Substance Use
5. Memory and Neurodegenerative Disorders
6. Neuropsychology of Psychiatric Disorders
7. Acquired Brain Injuries
8. Neuropsychological Rehabilitation & Intervention
9. Introduction to Psychopharmacology
10. Psychopharmacology: Depression & Anxiety
11. Psychopharmacology: ADHD & Psychotic Disorders
12. The Interplay Between Psychopharmacology & Clinical Psychology

Assessment

BEHV 7010 Clinical Psychopathology 1

Credit Points 10

Legacy Code 101812

Coordinator Craig Gonsalvez ([https://directory.westernsydney.edu.au/search/name/Craig Gonsalvez/](https://directory.westernsydney.edu.au/search/name/Craig%20Gonsalvez/))

Description This unit provides a comprehensive examination of the nature, context and assessment of adult psychopathology. Students will review and critically evaluate the origins and structure of current diagnostic systems, and examine the diagnostic criteria for a range of major psychopathological syndromes and the range of contexts within which they may arise. Skills in balancing the assessment of adult disorders with counselling and engagement through a clinical diagnostic interview will be acquired. Beginning level skills in the formation of adult disorders will also be acquired.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 1201 - Clinical Psychopathology LGYA 0485 - Advanced Psychopathology

Restrictions

Students must be enrolled in 1546 Master of Psychology (Clinical Psychology) or 1812 Master of Clinical Psychology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss the history and characteristics of the DSM and ICD and critically evaluate their strengths and limitations as classificatory systems of adult psychopathology.
2. Outline the diagnostic features and associated characteristics of the major DSM-5 psychological disorders (anxiety, mood, trauma and obsessive-compulsive and related disorders).
3. Describe the current major theories of the aetiologies of these disorders, identify risk and resilience factors and understand the diverse contexts within which such difficulties may arise.
4. Demonstrate competence in the assessment of adult psychopathology and making relevant and adequate diagnoses, case formulations and management plans for common psychological disorders. Conduct the clinical diagnostic interview in an interpersonally and culturally sensitive manner.

Subject Content

Theoretical and empirical foundations of psychopathology.
Clinical assessment of psychopathology.
Current classification systems (DSM-5 and contrasted to ICD 10, where relevant)
Anxiety disorders.
Mood disorders (including depressive and bipolar disorders).
Trauma and stressor-related disorders.
Obsessive-compulsive and related disorders.

DSM as a construction of disorder and relational problems that may be a focus of clinical attention.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Short Answers – Exam Part A: Mid Semester Part B: End of semester; both in class	1 hour (Part A) 1 hour (Part B)	30	Y	Individual
Practical – Clinical Skills Presentation	20 minutes	30	Y	Individual
Clinical Diagnostic Interview a. Practical skills demonstration (essential competencies) b. Practical skills demonstration (flexibility, reliability, generalisability)	50 minutes	40	Y	Individual

Teaching Periods

BEHV 7011 Clinical Psychopathology 2

Credit Points 10

Legacy Code 101813

Coordinator Janet Conti ([https://directory.westernsydney.edu.au/search/name/Janet Conti/](https://directory.westernsydney.edu.au/search/name/Janet%20Conti/))

Description This unit continues the study of clinical psychopathology. Students will examine the nature and assessment of a range of complex psychopathological syndromes, including schizophrenia and other psychotic disorders; eating disorders; personality disorders; substance-related disorders; dissociative disorders; and sexual and gender identity disorders and psychopathology presentations in diverse contexts (such as forensic settings and working with families).

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7010

Restrictions

Students must be enrolled in 1812 Master of Clinical Psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the diagnostic features and associated characteristics of psychopathological problems likely to be encountered in clinical practice
2. Describe the diagnostic features and associated characteristics of more complex less common, and co-morbid psychopathology diagnostic categories.
3. Apply the current major theories of the aetiologies of these disorders, identify vulnerability and resilience factors, and treatment alternatives
4. Develop skills in complex clinical formulations that are built upon theories, diagnostic characteristics and tailored to individual clients within their unique contexts
5. Develop clinical skills in the recognition of the various psychopathological issues and, where appropriate, the need for referral or involvement of other specialist services and health practitioners.
6. Develop skills in report writing for complex psychopathological issues that includes a comprehensive diagnostic formulation for the foundation for the proposed intervention

Subject Content

Schizophrenia and other psychotic disorders
Feeding and eating disorders
Personality disorders
Substance-related disorders
Sexual dysfunctions
Sleep/wake disorders
Dissociative disorders
Common psychopathological disorders in Forensic populations
Somatic symptom and related disorders
Family systems assessment

Assessment

Legacy Code 101814

Coordinator Fran Doyle ([https://directory.westernsydney.edu.au/search/name/Fran Doyle/](https://directory.westernsydney.edu.au/search/name/Fran%20Doyle/))

Description The ability to understand and critique empirical research findings, and to evaluate the efficacy of therapeutic interventions, is essential to the professional psychologist as a scientist-practitioner.

This unit equips students with advanced skills in utilising the research literature to guide and enhance their professional practice, design interventions to test clinically relevant hypotheses, and critically evaluate the effectiveness of existing research based on empirical evidence. It includes instruction in both quantitative and qualitative research design, program evaluation, single case designs and pilot studies.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Equivalent Subjects LGYA 0492 - Advanced Research Design

Restrictions

Students must be enrolled in 1546 Master of Psychology (Clinical Psychology), 1812 Master of Clinical Psychology or 1814 Master of Professional Psychology.

Assumed Knowledge

Years 1-4 Undergraduate psychology level research design, methods, and analysis.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise research design and methodology as a way of thinking, problem-solving, and approaching substantive clinically-relevant research questions (APAC GA: 3.2).
2. Evaluate and critique theoretical and applied literature to inform research evidence-based practice (APAC GA: 3.16, 4.2.1i & 4.2.3iv).
3. Evaluate a range of research methodologies to design a project that assesses clinical outcomes in psychology practice, including relevant transdisciplinary research for inter-professional practice (APAC GA: 3.9 & 3.17).
4. Conduct and report on a single case design project in relation to a clinically relevant area (APAC GA: 3.8 & 3.17).

Subject Content

Evidence-Based Practice and principles of research design and implementation.

Program and service evaluation.

Single-case experimental designs (SCEDs).

Pilot studies, assessing feasibility and acceptability.

Quasi-experimental designs and Randomised Control Trials.

Systematic Reviews, Meta-analysis, and Clinical Practice Guidelines and transdisciplinary research.

Qualitative Research Designs and Analyses.

Designing a project or developing an assessment process in professional psychology practice.

BEHV 7013 Cognitive Science: Research and Application

Credit Points 10

Legacy Code 800173

Coordinator Jennifer Macritchie ([https://directory.westernsydney.edu.au/search/name/Jennifer Macritchie/](https://directory.westernsydney.edu.au/search/name/Jennifer%20Macritchie/))

Description Cognitive science is the interdisciplinary scientific investigation of the mind. Contemporary research in cognitive science conducted by members of the MARCS Institute forms the core of the unit. Research areas to be addressed: plasticity and learning; action and coordination; nonverbal communication; and ageing and cognition. Examples of research questions: Can learning be unconscious? What mechanisms enable interpersonal coordination as seen in music and dance ensembles? Why is it that music elicits strong emotions? How does attention influence perception? How does conditioning explain human preferences? Does social facilitation apply to humans interacting with robots? In what way does ageing impact upon decision making? Applications to the arts, education, health, aging, design, human-machine interaction and artificial intelligence will be discussed.

School Graduate Research School

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

Master of Research core subjects: Research Design 1, Research Literacies or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate understanding of theories and concepts in cognitive science regarding plasticity, nonverbal communication, action and coordination, and ageing.

2. Apply concepts from cognitive science to a real-world practical problem.
3. Discuss interdisciplinary research conducted in one of three programs in MARCS.
4. Use software to create experimental stimuli for an experiment in one of the content areas.
5. Construct and conduct a cognitive science experiment.
6. Develop testable hypothesis and communicate experiment rationale, design, results and implications

Subject Content

1. Introduction to cognitive science: definitions, overview and particular perspectives.
2. Sensory and cognitive plasticity and functional fixedness. For example: evaluative conditioning and preferences; unconscious learning; auditory and visual perception and attention.
3. Action and coordination. For example, sensorimotor processes in interpersonal coordination; creativity, learning and memory in music and dance.
4. Nonverbal communication and mediation. For example, music and emotion; social processes in human-robot interaction; experience design; robots and pedagogy.
5. Ageing and cognition: For example, hearing-related problems; decision-making and aging.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

WIKI page	1000 words	20	N	Individual

Teaching Periods

BEHV 7014 Core Skills and Ethical Practice

Credit Points 10

Legacy Code 101810

Coordinator Steve Cumming ([https://directory.westernsydney.edu.au/search/name/Steve Cumming/](https://directory.westernsydney.edu.au/search/name/Steve%20Cumming/))

Description In this unit students apply core evidence-based counselling and intervention skills that are responsive to working within culturally and linguistically diverse communities, including and Aboriginal and Torres Strait Islander Australians. This unit addresses key cultural ethical, legal, and professional aspects of psychological practice; including working within one's competency and within inter-disciplinary contexts and the management of risk across the lifespan, including child protection. The theoretical underpinnings of evidence-based intervention strategies and ethical practice across the lifespan are critically examined, including from Aboriginal and Torres Strait Islander perspectives. Students develop their professional understanding of the codes and guidelines of the

Australian Psychological Society and Psychology Board of Australia, and the relevant State and Commonwealth Acts and Regulations of Parliament. Major practice problems faced by psychologists and modes of resolution acceptable within the profession are considered. Students reflect on professionalism in psychology practice and how their own perspectives, world views, values and competencies may inform their processes ethical decision-making. Students will also identify areas for ongoing professional development.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 0477 - Core Skills and Ethical Practice LGYA 1198 - Core Skills Counselling and Ethical Practice

Restrictions

Students must be enrolled in 1546 Master of Psychology (Clinical Psychology), 1812 Master of Clinical Psychology or 1814 Master of Professional Psychology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Implement evidence-based counselling and intervention skills within a framework of problem exploration, reflection on one's own practice and identifying areas for improvement (APAC GA: 3.2, 3.14 & 3.15).
2. Identify, demonstrate and reflect on key skills in building a therapeutic alliance, including attending and active listening, relational skills, including empathy, building motivation to change and goal setting, and evaluating change in a culturally responsive way that can be applied across all forms of psychotherapy (APAC GA: 3.3 & 4.2.2iv).
3. Implement therapeutic practices to ensure, inform and evaluate safe ps

Subject Content

Overview and critical evaluation of counselling and intervention models and frameworks, and their application including basic skills of active listening and responding, communication skills in three phases of problem-focused counselling, and forming a positive working alliance with clients and colleagues.

Therapeutic skills for challenging, goal setting and helping clients choose action strategies.

Cultural adaptations and responsiveness in counselling skills, including working with Aboriginal and Torres Strait Islander people.

Managing risk over the lifespan: Risk assessment, crisis management and child protection.

Managing risk over the lifespan: Risk assessment, crisis management and child protection. 5. Ethical contexts and guides: Rationale for professional codes, relating codes to moral theory, and overview of APS and Registration Board codes and the codes and the APS ethical guidelines for the provision of psychological services for, and conduct of psychological research with, Aboriginal and Torres Strait Islander peoples (2015).

Application and evaluation of moral theory and professional codes to a range of professional issues, including professional boundaries in relationships with clients, working within inter-professional contexts and within one's competency.

Ethical decision making: Sequential steps, meta-ethical considerations and moral theory to inform responding to and dealing with ethical dilemmas.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task

BEHV 7015 Core Therapeutic Modalities

Credit Points 10

Legacy Code 102360

Coordinator Craig Gonsalvez ([https://directory.westernsydney.edu.au/search/name/Craig Gonsalvez/](https://directory.westernsydney.edu.au/search/name/Craig%20Gonsalvez/))

Description This unit provides an introduction to the theory and practice of Cognitive Behaviour Therapy (CBT), an evidence-based form of therapy and an important therapeutic tool for psychologists working in diverse settings. Students in this unit will develop foundational skills in CBT assessment, formulation and treatment and a critical understanding of CBT application across conditions, populations and social settings. In addition, students will be introduced to family therapy (FT), including different models of FT, assessment, case formulation and FT application across different family situations. CBT and FT will be contrasted and examined for their application to a range of common psychological presentations, including ways to tailor responsive interventions in Aboriginal and Torres Strait Islander and multicultural contexts.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 1814 Master of Professional Psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain and critically evaluate theories and models of Cognitive Behavioural Therapy (CBT) and Family Therapy (APAC GA:3.2).
2. Implement a CBT assessment, formulation, therapeutic intervention and reflect on practice (APAC GA: 3.3, 3.6, 3.9, 3.15).
3. Contrast CBT and Family Therapy interventions across a range of psychological problems (APAC GA:3.2).
4. Examine therapeutic complexities and develop ways to evaluate and tailor CBT and Family Therapy approaches in Aboriginal and Torres Strait Islander peoples and multicultural contexts (APAC GA:3.2, 3.3, 3.7).

Subject Content

1. Theoretical and empirical foundations of Cognitive Behaviour Therapy (CBT)
2. CBT issues and methods
3. CBT assessment and case formulation
4. CBT application to common psychological problems and settings.
5. CBT related therapeutic approaches
6. Theoretical and empirical foundations of Family Therapy (FT)
7. Family therapy issues and methods
8. Introduction to family therapy assessment, and case formulation
9. Introduction to family therapy applications
10. Tailoring CBT in Aboriginal and Torres Strait Islander and multicultural contexts

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BEHV 7016 Digital Social Research in Action

Credit Points 10

Legacy Code 102253

Coordinator Luigi Di Martino ([https://directory.westernsydney.edu.au/search/name/Luigi Di Martino/](https://directory.westernsydney.edu.au/search/name/Luigi%20Di%20Martino/))

Description This unit engages students in the practices of digital social research through a simulation of a professional research consultancy. Students will construct and apply a digital social science approach for an internal or external client brief. Students will engage with client and stakeholder needs through their role as a consultant as they carry out the digital social research project for their client. In doing so, students engage with the ethical and moral implications of using digital social data and discover the opportunities to apply and communicate digital social research methods in real world settings.

School Social Sciences

Discipline Behavioural Science

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Knowledge of digital social research.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Determine opportunities to apply digital social science methods in innovative contexts;
2. Justify the selection and application of digital social science methods for a particular problem;
3. Construct and apply a digital social science approach to research;
4. Communicate digital social science projects in a manner appropriate for the discipline, audience and purpose (e.g. audience-appropriate structure, content, and referencing style);

5. Manage client and stakeholder expectations to ensure ethical and moral conduct in the use of digital social science data.

Subject Content

Research conceptualisation including research aims, objectives, and questions
 The importance of social theory for digital research
 Research designs and analytical frameworks for digital social research
 Client and stakeholders engagement
 Stakeholder mapping and management of expectations
 Ethical and moral use of digital social data
 Progress tracking for successful project delivery
 Report writing and strategic communication

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BEHV 7018 Integrated Practices 3: Emotions, Embodiment and Connection

Credit Points 20

Legacy Code 102372

Coordinator Amanda Webb ([https://directory.westernsydney.edu.au/search/name/Amanda Webb/](https://directory.westernsydney.edu.au/search/name/Amanda%20Webb/))

Description This unit presents and explores ways of working therapeutically with trauma. The interpersonal neurobiologists' focus of Mind/Body connection features in detail in this unit. Work with emotions, embodiment and the counsellor/client relationship as instruments of therapeutic change will be considered. Students will learn what it means to be a trauma-sensitive therapist and develop techniques and methods for working across the spectrum of trauma responses including dissociation. A range of psychotherapeutic models will feature such as somatic therapies, sensorimotor psychotherapy, emotionally focused therapy, and notions of 'felt sense'. Complementary modes of healing, such as mindfulness, breathwork and the practices of yoga and meditation will be considered for what they can offer to a trauma-informed approach to therapy. Students will

develop skills in working with emotions and nonverbal communication, as well as recognizing how the 'spoken' incorporates the physical.

 WELF 7013 AND
 WELF 7010 AND
 WELF 7006 AND
 WELF 7014

Co-requisite(s) WELF 7002

Restrictions

Students must be enrolled in 1817 M Psychotherapy and Counselling.

Assumed Knowledge

Concurrent or previous study of any foundational subject in counselling.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Reflect constructively on the concepts of emotion, embodiment and connection and explore their implications for the practice of psychotherapy and counselling.
2. Critically analyse how findings from contemporary neuroscience can be integrated into trauma-informed therapy from an interpersonal perspective.
3. Evaluate concepts and use of emotions and somatic awareness across different approaches to psychotherapy, including sensorimotor psychotherapy, somatic response therapy, gestalt therapy, the PTSD trauma model, emotionally focused therapy, constructivist self-development theory (CSDT)
4. Recognise and demonstrate the use of emotions, ♦️felt sense♦️ and somatic awareness within a therapeutic relationship, to assist clients to connect with themselves and others, particularly in relation to healing from trauma.
5. Effectively practice interpersonal counselling under supervision

Subject Content

1. Examination of the mind/body relationship in response to trauma from the perspective of contemporary neuroscience.
2. Exploration of working with emotions and somatic responses in the context of the talking therapies.
3. Understanding the specific features of the therapeutic relationship in the context of working with trauma.
4. Consideration and experiential learning of trauma informed therapeutic models, such as sensorimotor psychotherapy, neurosequential therapy, and emotion focused therapy.
5. Understanding the context and application of complementary practices such as mindfulness, EMDR, yoga, meditation and breathwork in counselling and psychotherapy.

BEHV 7020 Learning and Processing Human Language

Credit Points 10

Legacy Code 800171

Coordinator Caroline Jones ([https://directory.westernsydney.edu.au/search/name/Caroline Jones/](https://directory.westernsydney.edu.au/search/name/Caroline%20Jones/))

Description How do humans learn and process language, in its spoken, gestural, and written forms? This unit will equip students with theoretical foundations and practical understandings of how to read and conduct research in this area. Topics may include research areas such as language acquisition, language use and communication, word recognition, reading development and disorders, speech perception and production. In addition, a review of data collection and analysis techniques will be provided. The unit will include lecture and laboratory experimental work. The unit will be focused on research currently conducted by members of the MARCS Institute.

School Graduate Research School

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

Master of Research core subjects: Research Design 1, Research Literacies or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse and synthesise research ideas in learning and processing human language with a focus on speech articulation, speech perception, word recognition, language learning, reading, and multisensory processing

2. Identify and formulate an empirical research question and develop testable hypotheses
3. Apply skills in using relevant hardware and/or software (e.g., articulatory equipment, perception experiment software, Alveo cloud computing platform for large datasets)
4. Plan and conduct a straightforward empirical research project (e.g. experiments, modelling, corpus analyses)
5. Clearly communicate scientific ideas and results in written and spoken presentation formats

Subject Content

1. Introduction to research areas within human language learning and processing
2. Speech perception and spoken word recognition
3. Speech production: acoustic and articulatory measures
4. Learning and processing native languages
5. Learning and processing subsequent languages
6. Bilingual and multilingual language processing
7. How the development of reading affects language learning and processing
8. Multisensory language processing

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task

Credit Points 10

Legacy Code 800192

Coordinator Yossi Buskila ([https://directory.westernsydney.edu.au/search/name/Yossi Buskila/](https://directory.westernsydney.edu.au/search/name/Yossi%20Buskila/))

Description A multidisciplinary team will provide an introduction to several aspects of neuroscience including cellular, computational, behavioural and biomedical neuroscience. The program will provide a strong foundation in modern neuroscience for those wishing to pursue further independent research in the field. With a focus on real-world neuroscience research, topics include introductory biology, computational modelling, biosignal acquisition, signal processing and data mining. The unit will include lecture and laboratory work.

School Graduate Research School

Discipline Psychology**Student Contribution Band** HECS Band 1 10cp**Level** Postgraduate Coursework Level 7 subject**Equivalent Subjects** BEHV 7030 - Quantitative Methods in Neuroscience**Assumed Knowledge**

Students should have at least background/undergraduate knowledge in one or more of the following: mathematics, biology, chemistry, physics, physiology, electronics or similar.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate understanding of the nervous system, its basic functions.
2. Describe the basic structure of neurons.
3. Understand the basis of the resting membrane potential, Nerst and Goldman equations.
4. Describe the dynamics of the action potential, neural excitability, synapses, plasticity, integration and facilitation.
5. Describe the methodology of various neuroscience methods incl. patch clamp and microneurography.
6. Develop basic computational neural models.
7. Understand the utility and pitfalls of various biomedical devices for neural integration.

Subject Content

1. Introduction to the nervous system, basic functions and structure of neurons.
2. Cellular neuroscience
3. Computational neuroscience
4. Behavioural neuroscience
5. Biomedical neuroscience

BEHV 7025 Professional Psychology Placement

Credit Points 0**Legacy Code** 102539**Coordinator** Trinh Ha ([https://directory.westernsydney.edu.au/search/name/Trinh Ha/](https://directory.westernsydney.edu.au/search/name/Trinh%20Ha/))

Description This placement unit provides students with an opportunity to apply knowledge gained in coursework units to professional practice and to practice, under clinical supervision, basic assessment and

intervention skills with real clients. Each student must undertake a minimum of 300 hours of supervised placements, participate in the mandatory workshops and present at a case presentation to complete the course. This requirement is consistent with standards prescribed by APAC, the course accrediting body.

School Psychology**Discipline** Psychology**Student Contribution Band****Level** Postgraduate Coursework Level 7 subject**Pre-requisite(s)** BEHV 7015 AND

BEHV 7029 AND

BEHV 7014 AND

BEHV 7003

Restrictions

Students must be enrolled in 1814 Master of Professional Psychology.

Learning Outcomes

1. Demonstrate interviewing skills, psychological assessment, and case-formulation competencies at a beginner's level for one or two highly prevalent psychological problems, including with culturally diverse populations, including Aboriginal and Torres Strait Islander peoples (APAC GA: 3.2, 3.3, 3.5 & 3.6),
2. Apply psychometric and clinical assessment techniques to a highly prevalent health, disability, or mental health problem (APAC GA: 3.4, 3.5 & 3.6).
3. Demonstrate advanced-beginner competencies in core counselling techniques, including with culturally diverse populations, including Aboriginal and Torres Strait Islander peoples (APAC GA: 3.3 & 3.7),
4. Demonstrate intervention skills at the advanced beginner level in one empirically supported treatment approach (e.g., motivational interviewing, behaviour therapy, cognitive therapy) for a highly prevalent health or mental health problem, including with culturally diverse populations, including Aboriginal and Torres Strait Islander peoples (APAC GA: 3.2, 3.3, 3.9 & 3.16).
5. Display professionalism, professional communication competencies and ethical conduct in accordance with the Code of Conduct endorsed by the Psychology Board of Australia and meet all of the course inherent requirements. This includes professional engagement with and showing respect for the skills and contributions of other involved professionals (APAC GA: 3.10, 3.11, 3.12 & 3.13).
6. Comply with accreditation requirements concerning practicum, casework and supervision hours associated with such a placement (APAC GA: 3.2-3.16).
7. Conceptualise and communicate clinical information at the formal professional level
8. Demonstrate scientist-practitioner and reflective practitioner meta-competencies at the beginner level. This includes evaluating the effectiveness of own practice and making changes as required (APAC GA: 3.11,3.12, 3.14 & 3.15).

Subject Content

1. Supervised clinical placement in a setting relevant to the specific program.
2. Attendance and participation in three placement experience workshops.

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and complete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- <http://training.gov.au> (<http://training.gov.au/>)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

BEHV 7027 Psychological Interventions 1

Credit Points 10

Legacy Code 101213

Coordinator Craig Gonsalvez ([https://directory.westernsydney.edu.au/search/name/Craig Gonsalvez/](https://directory.westernsydney.edu.au/search/name/Craig%20Gonsalvez/))

Description This unit covers the theory and practice of Cognitive Behaviour (CBT) from a competency-based perspective. The competency paradigm is introduced first before key competencies including CB-Assessment, formulation, psychoeducation, behavioural (behavioural activation, exposure therapy and behavioural experiments) and cognitive intervention techniques are discussed. For each competency domain, knowledge (theory, models and principles), knowledge-application (procedural knowledge), technical skills (e.g., socratic dialogue) and relationship skills (engagement, collaboration, and collaborative empiricism) are addressed. Higher-order integrative competencies including the use of CBT in multicultural contexts, and meta-competencies such as scientist-practitioner and reflective-practitioner competencies are discussed towards the end of the unit. In alignment with competency-based pedagogies, learning activities include didactic presentations, knowledge-application tasks and skills training within small groups, and assessments include a demonstration of competence appropriate for a developing CB practitioner.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 5195 - Psychological Interventions 1 LGYA 1202 - Cognitive Behaviour Therapy Theory and Practice

Restrictions

Students must be enrolled in 1546 Master of Psychology (Clinical Psychology) or 1812 Master of Clinical Psychology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and describe the core features of CBT and its historical and theoretical foundations (APAC GA: 4.2.1i)
2. Critically analyse the differences and similarities between various CBT techniques (APAC GA: 4.2.1i)
3. Demonstrate the core CBT treatment techniques as applied to common psychological disorders (APAC GA: 3.2, 3.5, 3.14, 3.15, 4.2.1i, 4.2.1iii, 4.2.2ii, 4.2.3i)
4. Demonstrate competence in basic CBT assessment techniques, formulation, and treatment planning (APAC GA: 3.2, 3.6, 3.14, 3.15, 4.2.1i, 4.2.2ii, 4.2.2iii, 4.2.3i)
5. Evaluate the effectiveness of CBT for common psychological disorders, including in multicultural contexts. (APAC GA: 3.2, 3.3, 3.7, 3.9, 4.2.1iii, 4.2.2iv, 4.2.3ii)
6. Demonstrate ability to communicate appropriately tailored client formulations and treatment plan (APAC GA: 3.3, 3.8, 3.14, 3.15, 4.2.3i)

Subject Content

Historical and Theoretical foundations of CBT
 Cognitive Behaviour Assessment: Issues and Methods
 Cognitive Behavioural Case Formulation
 CBT Psychoeducation
 Principles, procedures and applications of Behavioural techniques including exposure therapies, behavioural activation, behavioural experiments and homework.
 Principles, procedures and applications of cognitive techniques including cognitive restructuring and socratic dialogue

Integrative competencies including the use of CBT in culturally and linguistically diverse contexts
 The role of scientist-practitioner and reflective-practitioner meta-competencies to develop and maintain career-long competence

BEHV 7029 Psychopathology: Theory and Practice

Credit Points 10

Legacy Code 102362

Coordinator Quincy Wong ([https://directory.westernsydney.edu.au/search/name/Quincy Wong/](https://directory.westernsydney.edu.au/search/name/Quincy%20Wong/))

Description This unit provides an examination of a range of major categories of psychopathology, including more typical presentations for psychological treatment and inter-professional indications and communication. Students will critically evaluate the common diagnostic systems of adult psychopathology, and examine the diagnostic criteria for a range of major psychopathology presentations. The unit will equip students with skills in the application of diagnostic and psychometric assessment of these psychological disorders and the ability to construct a case formulation with systemic and cultural considerations, including for Aboriginal and Torres Strait Islander people to inform psychological treatment interventions. Students will also develop skills in discerning when, why and how to collaborate

and communicate with multidisciplinary teams in inter-professional context.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects BEHV 7010 - Clinical Psychopathology 1

Restrictions

Students must be enrolled in 1812 Master of Clinical Psychology or 1814 Master of Professional Psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically evaluate the history and characteristics of the Diagnostic and Statistical Manual of Mental Disorders (DSM) and International Classification of Diseases (ICD), analysing their strengths and limitations as classificatory systems of adult psychopathology (APAC GA: 3.16, 4.2.1i, 4.2.1iii & 4.2.2i).
2. Evaluate and assess the diagnostic features and associated characteristics of major and comorbid psychological disorders and indications for inter-professional treatments, collaboration and communication. (APAC GA: 3.3, 3.4, 3.5, 3.8, 3.10, 3.11, 3.12, 4.2.1iii, 4.2.2ii, 4.2.2iii & 4.2.3iii).
3. Examine the current major theories of the aetiologies of these disorders, identify risk and resilience factors and apply these within a systemic and culturally informed framework, including for Aboriginal and Torres Strait Islander peoples. (APAC GA: 3.2, 4.2.1i & 4.2.1ii).
4. Implement and evaluate their practice of a clinical diagnostic interview that assesses adult psychopathology to generate provisional and differential diagnoses and case level formulation to inform treatment planning that takes into consideration systemic and cultural contexts, including for Aboriginal and Torres Strait Islander peoples (APAC GA: 3.3, 3.6, 3.14, 3.15 & 4.2.2iii).

Subject Content

Theoretical and empirical foundations of psychopathology, including current diagnostic classification systems ? International Classification of Diseases, 11th revision (ICD 11), Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM 5).

Clinical and psychometric assessment of psychopathology, including risk assessment.

Case formulation that includes systemic and cultural considerations in client presentations.

Anxiety disorders.

Mood disorders.

Trauma and stressor-related disorders.

Obsessive-compulsive and related disorders.

Eating and Feeding disorders.

Schizophrenia and other psychotic disorders.

Personality Disorders.

Substance Related Disorders.

BEHV 7031 Applied Research Project

Credit Points 10

Legacy Code 102696

Coordinator Renu Narchal (<https://directory.westernsydney.edu.au/search/name/Renu+Narchal/>)

Description This is a 20 credit point year-long subject taken over two terms (10 credit points in each term). The research project provides an opportunity to construct an informed research question or hypothesis. This justified research proposal is completed and investigated independently by students under supervision, over a one-year period. It is conducted in an area of relevance to professional practice, with a central focus on the scientific analysis of a problem or hypotheses. Students can choose from a range of approved research designs, but must undertake and write an analytic review of the relevant literature, formulate a research question, design of an appropriate method, collect and analyse data, interpret findings, and effectively communicate their research in the form of an empirical research report.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7012

Equivalent Subjects LGYA 0494 Applied Research Project and Thesis

Restrictions

Students must be enrolled in program 1546 Master of Psychology (Clinical Psychology) and 1812 Master of Clinical Psychology, or the coursework component of 8108 PhD/Master of Clinical Psychology.

Assumed Knowledge

Knowledge of undergraduate level research design, methods, and analysis.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Construct an informed research question or hypothesis and a justified research proposal that is relevant to clinical psychology practice (APAC GA: 3.2).
2. Determine and communicate appropriate research designs, methodologies, and analysis strategies that will address the research question/hypothesis effectively (APAC GA: 3.16).
3. Prepare an ethics application and complete the process for obtaining ethics clearance for research (APAC GA: 3.13).
4. Write an analytic literature review at a professional level of competence (APAC GA: 3.16 & 4.2.1i).
5. Complete an independent piece of research study in an area relevant to professional practice at a professional level of competence (APAC GA: 3.17).
6. Effectively communicate research in the form of a written empirical report (journal article) (APAC GA: 3.8).

Subject Content

Negotiating a supervision contract with an academic supervisor.
 Individual study in regular consultation with supervisor; including providing a regular report of progress to the supervisor.
 Attendance at seminars and workshops conducted from time-to-time to support completion of the research project.
 Writing a research proposal; and obtaining ethics clearance.
 Writing a literature review.
 Determining a research question and/or hypothesis.
 Devising a research design, methodology, and analysis strategy.
 Interpreting research findings.
 Writing an empirical report (journal article).

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Literature Review	5,000 words excluding references and appendices	S/U	Y	Individual
Report	5,000 words excluding references, tables and appendices	100	Y	Individual

BEHV 7032 Clinic Placement B

Credit Points 10

Legacy Code 102693

Coordinator Karen Moses ([https://directory.westernsydney.edu.au/search/name/Karen Moses/](https://directory.westernsydney.edu.au/search/name/Karen%20Moses/))

Description This placement unit comprises 180 hours of placement activity accrued one-day a week over 24 weeks, builds on knowledge and skills acquired in coursework units and extends and consolidates competencies acquired in Clinic Placement A. The aim of the unit is to establish and enhance, under close supervision, a range of clinical psychology assessment and intervention skills applied to real clients. Regular and systematic video-recording of trainee-client sessions and supervisor feedback guided by competency-based principles provide trainees with an excellent opportunity to acquire, consolidate and generalise a wide range of competencies important for clinical psychology practice.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7006 AND BEHV 7005

Restrictions

Students must be enrolled in 1812 - Master of Clinical Psychology.

Assumed Knowledge

Theoretical knowledge of ethical professional practice, psychopathology, and evidence-based psychology interventions.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. After successful completion of this Unit, students will be able to demonstrate at least a satisfactory level of skills performance for this stage of professional training as determined by relevant competency-based instruments (currently, the Clinical Psychology Practicum Competencies Scale (CYPRS) and the Clinical Skills Assessment Tool (C-SAT) in the following domains:
 2. 1. Demonstrate core evidence-based clinical psychology assessment and formulation competencies at an intermediate level for common psychological problems, including with culturally diverse / indigenous populations and with consideration to the context in which a client lives (APAC GA: 3.2, 3.3, 3.4, 3.5, 3.6, 3.8, 3.9, 4.2.1, 4.2.2i-iii, 4.2.3iv).
 3. 2. Demonstrate core evidence-based clinical psychology intervention competencies at an intermediate level for common psychological problems, including cognitive-behaviour interventions identified in the structured competency instruments (e.g. C-SAT and CYPRS), including with culturally diverse and indigenous populations (APAC GA: 3.2, 3.3, 3.7, 3.8, 3.9, 4.2.2iv, 4.2.3i, 4.2.3ii & 4.2.3iv).
 4. 3. Demonstrate therapist-client and supervisee-supervisor relationship competencies at an intermediate level (APAC GA: 3.10, 3.11, 3.12 & 4.2.3iii).
 5. 4. Display professionalism, professional communication competencies, ethical judgment and ethical conduct in accordance with the Code of Conduct endorsed by the Psychology Board of Australia and meet all of the program inherent requirements. This includes professional engagement with and showing respect for the skills and contributions of other involved professionals (APAC GA: 3.3, 3.8, 3.9, 3.10, 3.11, 3.12, 3.13 & 4.2.3iii).
 6. 5. Demonstrate scientist-practitioner and reflective practitioner meta-competencies at the advanced- beginner level. This includes evaluating the effectiveness of own practice and making changes as required (APAC GA: 3.11, 3.12, 3.14 & 3.15).
 7. 6. Evidence an ability to integrate knowledge of assessment and formulation into a professional case report that meets standards for evidence-based client care and written professional communication. (APAC GA: 3.4, 3.5, 3.6, 3.7, 3.8, 3.9, 3.16, 4.2.2, 4.2.3i & 4.3.2ii).
 8. 7. Comply with accreditation requirements concerning practicum, casework and supervision hours (APAC GA: 3.1-3.17, 4.2.1, 4.2.2 & 4.2.3).

Subject Content

Supervised placement in the Western Sydney University Psychology Clinics.

Increased observation through simulation. Supervision via zoom.

Special Requirements - NSW Health Legislative Prerequisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and complete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- <http://training.gov.au> (<http://training.gov.au>)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Portfolio	As outlined by the C-SAT competency instrument	S/U	Y	Individual
Professional Placement Performance	As outlined in the CYPRS	S/U	Y	Individual
Log/Workbook	As outlined in the Unit's Logbook Guidelines	S/U	Y	Individual
Case Study	As outlined in the Unit's Case Report Guidelines	S/U	Y	Individual

Credit Points 10

Legacy Code 102694

Coordinator Trinh Ha ([https://directory.westernsydney.edu.au/search/name/Trinh Ha/](https://directory.westernsydney.edu.au/search/name/Trinh%20Ha/))

Description This placement unit is an external placement that provides students the opportunity to practise, under clinical supervision, clinical psychological assessment and intervention to a range of clients across age ranges, severity levels and psychological disorders. The aim is to build upon and extend knowledge, skills, relationship and professional attitude competencies acquired during a supervised University Clinic placement while working with real clients seeking clinical psychological services within an external agency. Each external placement must comprise a minimum of 200 hours of clinical psychology practicum work of which at least 80 hours must be in face-to-face client work, and all internal and external placements together must comprise a minimum of 1000 practicum hours of which 400 hours must be in face-to-face client work as defined by APAC. Placements are arranged by the Placement Coordinator who is responsible for ensuring that the placement and supervision meet APAC requirements. Students must participate in the mandatory workshops and present a case at the relevant Case Presentation Day (or equivalent by permission in special circumstances).

BEHV 7035 Psychological Approaches to Disability: Theory and Practice

Credit Points 10

Legacy Code 102692

Coordinator Michael Gascoigne ([https://directory.westernsydney.edu.au/search/name/Michael Gascoigne/](https://directory.westernsydney.edu.au/search/name/Michael%20Gascoigne/))

Description This unit offers students a contemporary understanding of the psychological assessment, intervention and evaluation techniques relevant to the support of people with disability. Biological, psychological social and community factors contributing to support will be presented. Ecological, functional and clinical approaches to planning across the life span will be taken, addressing early intervention, childhood, adolescence, adulthood and ageing. A key focus of the unit will be advancing inclusion and quality of life outcomes to enable people with disability to fully participate in society. Current legal, policy and ethical issues will also be discussed, including professional standards for working effectively across multicultural and multidisciplinary contexts.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 1814 Master of Professional Psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recall and appraise the psychological supports for people with disability across the life-span (APAC GA: 3.2).
2. Demonstrate competence in the assessment of support needs of persons with disability, including their cultural needs (APAC GA: 3.3, 3.6 & 3.15).
3. Develop a management plan to support a person with disability to maximise quality of life through participation and inclusion (APAC GA: 3.9).
4. Apply disability psychology skills to evidence-based assessment, intervention and evaluation processes (APAC GA: 3.4 & 3.7).
5. Critically analyse the psychologist's role within a multidisciplinary team and responsibility to act in accordance with contemporary disability policy, legal and ethical conventions (APAC GA: 3.10, 3.11, 3.12 & 3.13).

Subject Content

- Definition of disability and introduction to The Roles and functions of psychologists in The disability sector.
- key diagnostic Categories including autism, Intellectual disability, acquired Brain injury, physical disability, Sensory disability.
- psychological support across The life-span: birth of A child with disability, early intervention and transition to school, school education and transition to adulthood, adulthood, and transition to ageing and end of life.
- psychological assessment, intervention and evaluation of psychological supports across The life span.
- Psychologists' Roles

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Case study	Max 2000 words	30	Y	Individual
Practical: Assessment Interview	30 minutes	40	Y	Individual
Report	Max 1000 words	30	Y	Individual

BEHV 7036 Research Internship and Engagement

Credit Points 10

Legacy Code 800228

Coordinator Anna Denejkina ([https://directory.westernsydney.edu.au/search/name/Anna Denejkina/](https://directory.westernsydney.edu.au/search/name/Anna%20Denejkina/))

Description The aim of this unit is to provide MRes candidates with a research development and training opportunity through a cross disciplinary, supportive, experiential learning environment. Through exposure to workplaces, research institutes, community settings, and research processes, students will have the opportunity to apply their research and technical skills and develop their professional identity in their chosen field of research. The placement will be chosen by the student in consultation with the unit coordinator and will be undertaken either as an individual or part of a project team. If students enrolled in B Research Studies/M Research wish to take this unit before having completed the prerequisite unit 800218 Researcher Development 1: Reading, Writing, and the Business of Research, contact the unit coordinator to obtain permission to complete a rule waiver (this will be on a case by case basis only).

School Graduate Research School

Discipline Behavioural Science, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) HUMN 4001

Equivalent Subjects BEHV 7019 - Internship and Community Engagement (PG)

Restrictions

Students must be enrolled in 8083 Bachelor of Research Studies or 8084/8085 Master of Research. Internship or work placement must be agreed between student and subject coordinator prior to student enrolling in the subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appraise intersections between research, work environment, and experiential learning
2. Interpret the relationship between discipline area and its contribution to broader societal transformations
3. Analyse the work environment and creative practices as evident in the workplace and/or community setting and design creative solutions and innovative practices to solve challenges identified in the workplace and/or community setting
4. Demonstrate an understanding of areas for improvement and development in the professional environment, and recommend future development actions using the Extreme Ownership framework
5. Plan and manage the resources required for the internship and present a professional profile
6. Demonstrate skills to communicate about and discuss their research in a professional environment

Subject Content

1. Developing your professional identity

2. Writing and presenting conference papers
3. Learning how to design and present conference posters in line with best practice
4. Ethics of data communication ? writing, presenting and talking about your research
5. The danger of data manipulation (active and passive ? with stronger focus on passive); and
6. Experiential learning theory
7. Professional practices: Innovation, creativity, ethics and diversity in the workplace
8. Principles of community and/or industry engagement
9. Reflective practice for personal and professional development
10. Getting things done: Collaborative practice
11. How research impacts and contributes to broader societal transformations

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and complete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- <http://training.gov.au> (<http://training.gov.au/>)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

BEHV 7037 Psychological Practice in Contemporary Contexts

Credit Points 10

Legacy Code 102808

Coordinator Janet Conti ([https://directory.westernsydney.edu.au/search/name/Janet Conti/](https://directory.westernsydney.edu.au/search/name/Janet%20Conti/))

Description The ability to work with mental health issues and psychological distress that arises within a range of contexts is an essential skill for Clinical Psychologists. This unit equips students with skills in assessment, formulation and tailored psychological interventions for those who experience psychological distress within family systems and broader socio-cultural contexts; including abuse and violence; working within medico-legal systems, and broader socio-cultural contexts. The unit will explore theories, psychological techniques and prepare students to working within these settings that include inter-disciplinary collaboration and communication with multidisciplinary health services and legal practitioners. Please note: some of the activities in this unit may include experiential learning, for example where students may be asked to take on the client role using their own lived experience, to provide opportunity for training in therapeutic modalities that are more "real life". Students may opt-out of these activities without consequence through speaking to the unit coordinator and alternative arrangements for student learning opportunities will be organised.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7027 AND BEHV 7006 AND BEHV 7029 AND BEHV 7038

Restrictions

Students must be enrolled in 1812 Master of Clinical Psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design and produce a psychological assessment, formulation and treatment plan for a family therapy intervention with application of family systems theory (APAC GA: 3.8, 4.2.1i, 4.2.1ii & 4.2.2iii, 4.2.3i & 4.2.3iv).
2. Apply a treatment intervention that addresses a psychological problem through understanding the person within their psychosocial and cultural context; and evaluate and reflect on and identify areas for improvement in the process and outcomes of the psychological intervention (APAC GA: 3.2, 3.3, 3.9, 3.14, 3.15, 4.2.1i, 4.2.1ii, 4.2.3i & 4.2.3iv).
3. Examine and reflect on the roles and functions of clinical psychologists in common interprofessional, medico-legal and forensic settings, including assessment, interviewing, evolving case formulation to inform tailored psychological interventions and inter-professional communication. (APAC GA: 3.6, 3.10, 3.11, 3.12, 3.14, 4.2.2ii, 4.2.2iii & 4.2.3iii).
4. Evaluate psychological interventions to ensure they are tailored to the person within their familial and socio-cultural context, including Aboriginal and Torres Strait Islander peoples. (APAC GA: 3.7, 4.2.1i, 4.2.2iv, 4.2.3ii & 4.2.3iv).

Subject Content

Systemic family therapy interventions: working with individuals within their family system and socio-cultural context, including couples therapy and interventions that address power imbalances within family systems; including abuse and violence.

Working within inter-professional contexts, including medico-legal contexts including forensic investigative psychology, legal issues frequently encountered in psychological practice, and communicating with relevant agencies including report writing.

Tailoring psychological assessment and interventions to diverse cultural contexts, including when working with Aboriginal and Torres Strait Islander people.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Case Study	2,000 words	40	Y	Individual

BEHV 7038 Assessment and Treatment of Complex Psychological Disorders

Credit Points 10

Legacy Code 102809

Coordinator Janet Conti ([https://directory.westernsydney.edu.au/search/name/Janet Conti/](https://directory.westernsydney.edu.au/search/name/Janet%20Conti/))

Description Clinical psychology is a fast-evolving discipline, and practitioners need to be able to respond to changing psychological health needs of a diverse population. This unit will prepare students to expand their skills in clinical assessment of psychopathology, diagnosis and psychological interventions to respond to the needs and preferences and cultural values of clients who experience complex and/or chronic psychological disorders. Responsive practice within the context of the changing demands for clinical psychology services is foregrounded, as is the unique context of Aboriginal and Torres Strait Islander people. This unit will explore the theories, techniques and effectiveness of new and emerging psychological therapies; prepare students for working in multidisciplinary teams; and introduce students to the practice of clinical psychology with more complex client groups. The unit will also examine the professional and organisational roles of clinical psychologists within these settings. Please note: some of the activities in this unit may include experiential learning, for example where students may be asked to take on the client role using their own lived experience, to provide opportunity for training in therapeutic modalities that are more "real life". Students may opt-out of these activities without consequence through speaking to the unit coordinator and alternative arrangements for student learning opportunities will be organised.

School Psychology

Discipline Psychology

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) BEHV 7027 AND BEHV 7029

Equivalent Subjects BEHV 7028 - Psychological Interventions 2 LGYA 1563 - Psychological Interventions 3

Restrictions

Students must be enrolled in 1812 Master of Clinical Psychology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply evidence-based psychological practice that tailors the best available psychological treatments to clients, taking into consideration their wider social and cultural context (APAC GA: 3.2 & 4.2.1i, 4.2.3i, 4.2.3ii, 4.2.3iv).
2. Evaluate the diagnostic features and associated characteristics of complex and co-morbid psychopathological presentations and the current major theories of the aetiologies, vulnerabilities and resilience factors of these disorders; and apply these to clinical diagnosis and complex and evolving case formulations to inform treatment alternatives and their evaluation, including inter-disciplinary treatments and communication with other health professionals (APAC GA: 3.5, 3.7, 3.8, 3.10, 3.12, 4.2.1i, 4.2.1ii, 4.2.1iii, 4.2.2i, 4.2.2iii & 4.2.2iv, 4.2.3ii & 4.2.3iii).
3. Apply therapeutic skills in the assessment, formulation, planning and implementation of psychological interventions that may be applied trans-diagnostically to address a range of complex psychological problems, reflecting upon the appropriate treatment modifications required for each clinical population and including working with the unique attributes of the person within their cultural context (including with Aboriginal and Torres Strait Islander Australians) (APAC GA: 3.2, 3.3, 3.6, 3.9, 4.2.2ii & 4.2.3i).
4. Demonstrate therapeutic skills in one psychological intervention and engage in reflective practice on the process and outcomes of the intervention (APAC GA: 3.6, 3.9, 3.15 & 4.2.3i).

Subject Content

Theoretical and empirical foundations of the practice of clinical psychology interventions with specific clinical populations with complex presentations.

Assessment, diagnosis and formulation and psychological treatment interventions for a range of complex clinical populations.

Introduction of a range of intervention modalities that may be tailored trans-diagnostically and to the unique attributes of the person, family, or community within their cultural context (including with Aboriginal and Torres Strait Islander Australians).

Skills to work collaboratively within clinical and multidisciplinary teams.

BIOS 0001 Biology (WSTC)

Credit Points 10

Legacy Code 900022

Coordinator Virginia Shepherd ([https://directory.westernsydney.edu.au/search/name/Virginia Shepherd/](https://directory.westernsydney.edu.au/search/name/Virginia%20Shepherd/))

Description Biology is the study of the cellular processes that occur within organisms and the interactions that occur between organisms within the biosphere. The unit is therefore seen to have relevance to the lives of students. It is important for students to develop an understanding of the biological principles that will enable them to make informed decisions about the advances that are occurring in biotechnology and biomedical science. Undergraduate study in the life sciences requires the student to have acquired a basic body of knowledge that focuses on the diversity and the unity of living things as well as skills in collecting and analysing information and writing concise and coherent explanations.

BIOS 0002 Focus on Biology (WSTC Prep)

Credit Points 10

Legacy Code 700232

Coordinator Virginia Shepherd ([https://directory.westernsydney.edu.au/search/name/Virginia Shepherd/](https://directory.westernsydney.edu.au/search/name/Virginia%20Shepherd/))

Description Biology is the study of integrated living systems, from the level of molecular systems that constitute cells to the interactions that occur within and between organisms that together make up the biosphere. This unit will equip students to undertake tertiary level biological units that emphasise both the unity (cell biology) and diversity (evolution) of living organisms. Students will learn about the basic molecular biological underpinnings of cellular structure and function within an integrated framework that proceeds through major themes of bioenergetics, gas exchange and transport systems within multicellular organisms, inheritance and evolution. Students will develop a fundamental body of essential biological concepts, as well as build skills in collecting and analysing information, and writing coherent explanations.

School Western Sydney The College

Discipline Biological Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects BIOS 0003 - Focus on Biology (WSTC) BIOS 0001 - Biology

Restrictions Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Conceptualise and describe fundamental properties of living systems.
2. Recall the basic structural organisation of prokaryotic and eukaryotic cells.
3. Explain fundamental cellular processes including membrane transport, photosynthesis and respiration.
4. Explain the basic roles of nucleic acids, proteins, carbohydrates and lipids in cell structure and function.
5. Describe and explain the necessity for processes of gas exchange in multicellular organisms.
6. Describe and explain the necessity for transport systems in multicellular organisms.
7. Describe the manner in which genetic information is passed from generation to generation.
8. Outline at a basic level the process of protein synthesis from a DNA template.
9. Explain in simple terms the concept of evolution through natural selection and changes in gene frequency.
10. Describe basic characteristics of six kingdoms of life within an evolutionary framework.
11. Solve problems, analyse and synthesise information, and draw conclusions.

Subject Content

Topic 1: Cells: The Basis of Life

- Characteristics of living systems
- Prokaryotes and eukaryotes
- Organisation, structure and function of cells
- Overview of evolution of eukaryotic cells
- Emergence of multicellularity

Topic 2: Cells in Action

- Life building blocks: proteins, nucleic acids, lipids and carbohydrates
- Maintaining a boundary: cell membranes and membrane transport, compartmentalisation of eukaryotic cells

- Energising the biosphere: chloroplasts and photosynthesis

- Fuel for life: mitochondria, cellular respiration, and ATP

Topic 3: Life on Land: Gas Exchange in Multicellular Organisms

- Gas exchange systems in multicellular organisms: overview of evolution

- Stomata, guard cells and transpiration

- The mammalian respiratory system

Topic 4: Life on Land: Transport Systems in Multicellular Organisms

- Transport systems in multicellular organisms: overview of evolution

- Roots and shoots, xylem and phloem: transport in flowering plants

- The mammalian circulatory and excretory systems

Topic 5: Reproduction and Inheritance

- DNA, genes, and chromosomes

- Protein synthesis

- Cell division in eukaryotes

- Aspects of Mendelian Inheritance

Topic 6: Evolution and Biodiversity

- Natural selection, changes of gene frequency in populations

- Hylogeny: six kingdoms, three domains of life

- Themes in evolution

Topic 1: Cells: The Basis of Life

- Characteristics of living systems

- Prokaryotes and eukaryotes

- Organisation, structure and function of cells

- Overview of evolution of eukaryotic cells

- Emergence of multicellularity

Topic 2: Cells in Action

- Life building blocks: proteins, nucleic acids, lipids and carbohydrates

- Maintaining a boundary: cell membranes and membrane transport, compartmentalisation of eukaryotic cells

- Energising the biosphere: chloroplasts and photosynthesis

- Fuel for life: mitochondria, cellular respiration, and ATP

Topic 3: Life on Land: Gas Exchange in Multicellular Organisms

- Gas exchange systems in multicellular organisms:

BIOS 1001 Biodiversity

Credit Points 10

Legacy Code 300802

Coordinator Christa Beckmann ([https://directory.westernsydney.edu.au/search/name/Christa Beckmann/](https://directory.westernsydney.edu.au/search/name/Christa%20Beckmann/))

Description How many species walk, fly, swim or slither, crawl, hop, wriggle or just float, hitchhike or move so slowly that they appear not to move at all? No one knows and new species appear almost every day. This unit focuses on this spectacular diversity of living things and the process of evolution. Students explore and classify biodiversity and how organisms function, acquire and assimilate resources and co-ordinate growth and reproduction. Organisms interact with one another and their environment forming a complex set of interactions in ecosystems. It is these interactions that have driven evolution. Ultimately human survival depends on the sustainable use of this biodiversity and ecosystems.

Assumed Knowledge

Basic knowledge of biology and chemistry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the characteristics of major biological groups and demonstrate how this information can be used to classify an unknown organism.
2. Explain and provide examples that demonstrate how evolution has given rise to biodiversity.
3. Describe and explain the role of cells, tissues and organs in the structure and function of organisms.

4. Explain how organisms acquire the resources necessary to function.
5. Describe the scientific method and demonstrate how it can be used to test explanations of observations by formulating testable hypotheses and designing experiments.
6. Conduct basic investigations of organisms using microscopy, experimentation and perform data analysis and interpret results.
7. Apply and transfer chemical principles to other contexts such as the origin of life, and how organisms acquire the necessary resources to sustain life.
8. Evaluate data and evidence from scientific literature.

Subject Content

The characteristics of living things and the nature of Biodiversity Science as a way of knowing

Classification, taxonomy and species

Evolutionary theory

A survey of the major groups of living things from bacteria, viruses, protists and fungi to plants and animals

Evolutionary development of structure and function

The role of living organisms in ecosystems

The Biodiversity crisis

Basic light microscopy observing plants, animals and microbes

Sorting, organising and classifying organisms

Formulation of scientific hypotheses, designing experiments and data analysis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Quiz	Approximately 10 1 hour per week, but of variable duration due to student's ability		N	Individual
Quiz	50 minutes	20	N	Individual
Practical	4 x 3 hours	20	N	Individual
Final Exam	2 hours	50	N	Individual

Legacy Code 700095

Coordinator Virginia Shepherd ([https://directory.westernsydney.edu.au/search/name/Virginia Shepherd/](https://directory.westernsydney.edu.au/search/name/Virginia%20Shepherd/))

Description How many species walk, fly, swim or slither, crawl, hop, wriggle or just float, hitchhike or move so slowly that they appear not to move at all? No one knows and new species appear almost every day. This unit focuses on this spectacular diversity of living things and the process of evolution. Students explore and classify biodiversity and how organisms function, acquire and assimilate resources and co-ordinate growth and reproduction. Organisms interact with one another and their environment forming a complex set of interactions in ecosystems. It is these interactions that have driven evolution. Ultimately human survival depends on the sustainable use of this biodiversity and ecosystems.

Students enrolled in Extended Diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject. Students enrolled in the combined Diploma/Bachelor programs listed below must pass all College Preparatory subjects listed in the program structure before progressing to the Year 2 subjects.

Assumed Knowledge

Basic knowledge of biology and chemistry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the characteristics of major biological groups and demonstrate how this information can be used to classify an unknown organism.
2. Explain and provide examples that demonstrate how evolution has given rise to biodiversity.
3. Describe and explain the role of cells, tissues and organs in the structure and function of organisms.
4. Explain how organisms acquire the resources necessary to function.
5. Describe the scientific method and demonstrate how it can be used to test explanations of observations by formulating testable hypotheses and designing experiments.
6. Conduct basic investigations of organisms using microscopy, experimentation and perform data analysis and interpret results.
7. Apply and transfer chemical principles to other contexts such as the origin of life, and how organisms acquire the necessary resources to sustain life.
8. Evaluate data and evidence from scientific literature.

BIOS 1010 Bioscience 1

Credit Points 10

Legacy Code 401002

Coordinator Anna Maceri ([https://directory.westernsydney.edu.au/search/name/Anna Maceri/](https://directory.westernsydney.edu.au/search/name/Anna%20Maceri/))

Description This unit will be replaced from Autumn 2022 by 401469 Bioscience 1. This unit introduces nursing and midwifery students to the terminology and major introductory concepts related to normal structure and function of the human body and its relationship to performances of activities of living and healthy lifestyle practices.

School Nursing & Midwifery

Discipline Human Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Learning Outcomes

1. Define anatomy and physiology of the human body across the lifespan
2. Identify appropriate terminology to biological concepts and mechanisms
3. Describe the physiological healthy body systems and homeostasis
4. Explain the impact of lifestyle practices that improve people's health literacy with relevance to nursing and midwifery practice
5. Analyse biological concepts of health conditions related to Australian National Health Priority areas

Subject Content

1. To inform nursing and midwifery practice, the following body systems are reviewed
 - a. Human genome basics
 - b. The integument, cardiovascular, respiratory, digestive, musculoskeletal, nervous, endocrine, reproductive and urinary systems
2. For each system, the concepts addressed are
 - a. Fundamentals of Anatomy and Physiology
 - b. Levels of body system organisation
 - c. Growth and development across the lifespan
 - d. Homeostasis and health
 - e. Relationship to activities of living and healthy lifestyle practices
 - f. Relationship to National Health Priorities - Obesity

Assessment

Legacy Code 401006

Coordinator Bashir Sumar ([https://directory.westernsydney.edu.au/search/name/Bashir Sumar/](https://directory.westernsydney.edu.au/search/name/Bashir%20Sumar/))

Description This unit will be replaced from Autumn 2022 by 401470 Bioscience 2. This unit extends knowledge gained in Bioscience 1 and introduces nursing students to concepts associated with alterations in health and wellness as a consequence of life transition. It includes an introduction to pathophysiology, pharmacology, immunology and microbiology. The unit also focuses on the impact of microorganisms on the health of people and the body's natural defences, as well as pharmacological interventions, in dealing with infections and injuries and its significance for nursing.

School Nursing & Midwifery

Discipline Human Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Co-requisite(s) BIOS 1010

Equivalent Subjects BIOS 1021 - Introduction to Health Breakdown

Restrictions Students must be enrolled in 4691 Bachelor of Nursing or 4693 Bachelor of Nursing (Advanced) or 4780 Bachelor of Nursing - WSU Online. Students must be enrolled in 4780 to enrol in WSU Online Campus subjects. Unitrack students may study this subject as a miscellaneous subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the physiological changes that occur in the body in response to health breakdown due to ageing, injury and disease, and in wound healing.
2. Outline the implications of preventative strategies in health breakdown for professional nursing practice.
3. Relate the role of the immune system to the maintenance of health and the consequences of its breakdown.
4. Utilise the concepts associated with primary health care to explain how microorganisms contribute to health breakdown within communities and health care facilities.
5. Discuss the role of pharmacological interventions in health breakdown.

Subject Content

1. The ageing process through to cessation of life
2. Inheritance Patterns ? cancer, genetics and testing
3. Introduction to pathophysiology
4. Cause, pathogenesis, symptoms, course, prognosis, prevention of disease

5. Relevance for nursing
6. Introduction to pharmacology for nurses
7. Pharmacokinetics and pharmacodynamics
8. Microbiology and infections - relevance for nursing
9. Common pathological organisms
10. Sources of infection and modes of transmission
11. National Safety and Quality Health Service Standard 3 ? Preventing and Controlling Healthcare Associated Infections
12. Protein Synthesis
13. Antimicrobial therapy
14. Immune Processes
15. Immune system breakdown and role of the nurse
16. Vaccination and immunisation
17. The inflammatory process
18. Wound healing

Assessment

BIOS 1012 Cell Biology

Credit Points 10

Legacy Code 300816

Coordinator Gabriel Perrone ([https://directory.westernsydney.edu.au/search/name/Gabriel Perrone/](https://directory.westernsydney.edu.au/search/name/Gabriel%20Perrone/))

Description Cells are the most basic form of all life, and underlying normal cell function are the molecules used to build complex cellular structures, generate energy, and propagate dynamic life. The unit will study the fundamental processes through which key biomolecules, including lipids, carbohydrates, amino acids and nucleic acids are manipulated to generate and store energy, and build a broad array of important biological macromolecules including DNA, membranes and proteins. To sustain life, cells respire for energy and replicate for growth and sexual reproduction. Accordingly the unit will examine cellular respiration, transcription, translation, mitosis, meiosis, transmission and how genes are inherited and modified providing insight into the phenomena of life. The role of DNA technologies in the fields of medicine, biotechnology and environmental science will provide students with real world applications.

Assumed Knowledge

Basic understanding of biology and chemistry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe a range of cell structures and shapes, and cellular organelles
2. Describe the broader role of organelles in cellular function and explain the importance of compartmentalisation
3. Describe the structure and chemical characteristics of the five major groups of molecules important to cellular life (water, carbohydrates, lipids, proteins, nucleic acids) and relate this structure to function in cellular processes
4. Explain why the different forms of cellular division are required for cellular function and the consequences when cellular processes fail to function properly
5. Explain how cells obtain energy, and how they use energy for driving reactions
6. Apply and transfer biological principles to other contexts such as chemical systems
7. Describe a range of DNA technologies in a variety of fields
8. Demonstrate skills in a range of experimental techniques e.g. microscopy, pipetting, biological techniques, calculations, recording data, interpreting and plotting data, writing reports

Subject Content

Structural organisation of cells

Molecular components of cells
 Membrane structure and function
 Energy and metabolism
 Cell communication
 How cells divide
 Sexual reproduction and meiosis
 Patterns of inheritance
 DNA: The genetic material
 Genes and how they work
 Control of gene expression
 DNA Technologies

Coordinator Ian Wright ([https://directory.westernsydney.edu.au/search/name/Ian Wright/](https://directory.westernsydney.edu.au/search/name/Ian%20Wright/))

Description This unit introduces students to the physical, chemical and biological nature of water systems and the linkages to human activity. These linkages include a development of an appreciation of the essential services and broad uses and values of water in modern human society, and the natural environment. Students are challenged to examine the causes and effects of water pollution and environmental degradation. Students are introduced to scientific water sampling, analysis and reporting of water quality and pollution.

School Science

Discipline Natural and Physical Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BIOS 1028 - Management of Aquatic Environments

Learning Outcomes

On successful completion of this subject, students should be able to:

- List and compare and contrast the physical, chemical and biological components of a freshwater system;
- Design an experiment to measure the condition of a freshwater system using physical chemical and biological indicators;
- Discuss the potential risk to human health from exposure to degraded aquatic environments;
- Assess impacts of human development on the ecological health of freshwater aquatic environments;
- Recommend management strategies for improved freshwater environmental management;
- Explain the concept and principles of Ecologically Sustainable Development;
- Demonstrate competencies in written and oral communication, teamwork, experimental design, information literacy and data processing.

Subject Content

- The role of water in modern society
- Water as a renewable resource
- Demands of human activity on waterways
- Ecosystems and waterways
- Disposal of waste using waterway
- Water pollution and its causes
- Water quality and recreation
- Government policy and regulation of water
- Water sample collection
- Laboratory analysis of water chemistry and biology
- Communication and teamwork
- Designing and delivering an oral presentation
- Interpretation of water quality data
- Use of field water quality meters

Special Requirements

Legislative pre-requisites

Students who opt to enrol in this subject are strongly recommended to obtain a Tetanus vaccination/booster. Students who cannot evidence vaccination may be precluded from activities on the Farm, and/or internships with third parties.

Assessment

BIOS 1030 Resource Sustainability

Credit Points 10

Legacy Code 300810

Coordinator Andy Broderick ([https://directory.westernsydney.edu.au/search/name/Andy Broderick/](https://directory.westernsydney.edu.au/search/name/Andy%20Broderick/))

Description Resource sustainability deals with the local, national, and global sustainability issues concerning human interactions with the environment. The unit uses current resource issues and scientific concepts to provide the practical and theoretical information needed for students to think critically about environmental issues and to contribute to the sustainable management of natural and built environments. Students will also learn how science and society interact in the management of resources. Using the concept of ecologically sustainable development as a foundation, students will use critical thinking skills to research a resource issue of their choice at the local, national and/or international level. Students will communicate their research using new media exploring the issue and make recommendations for improving sustainability.

School Science

Discipline Ecology and Evolution

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BIOS 1029 - Resource Sustainability BIOS 1031 - Resource Sustainability (WSTC)

Assumed Knowledge

Basic biological science and an understanding of referencing.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate critical thinking skills to make informed decisions about environmental issues and resource sustainability at the global, national, local, and personal levels.
2. Describe the scientific principles underlying sustainability, the limits of science in natural resource management, and the concept of ecologically sustainable development.
3. Explain and reflect on how human activities impact on sustainability of environments and resources.
4. Apply skills in academic reading, accessing library resources and field research to understand current issues in resource sustainability.
5. Analyse in-depth a resource issue at a range of scales and recommend solutions to sustainability problems.
6. Use spatial information in sustainable resource management.
7. Communicate a sustainable resource issue through new media.

Subject Content

Broad principles of Environmental Science and ecology and sustainable resource management

Concepts & principles of Ecologically Sustainable Development (ESD) and other policies that influence resource use

How science interacts with societal values in resource use

Local, regional, national and international issues and current events in resource management

Sustainability issues involving Human Population, Threatened and Endangered Species, Invasive Species, Water Availability and Quality, Energy, Climate Change, Fisheries, and Agriculture

Critical thinking skills and the application of these skills to information obtained from the media and other sources regarding resources

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Written research report	1250 words	15	N	Individual
Workshop group presentations	5 minutes each workshop and peer assessed	15	N	Group
Quizzes	30 minutes each	30	N	Individual
New Media presentation	5-7 minutes	40	N	Individual

BIOS 1033 Concepts in Human Physiology

Credit Points 10

Legacy Code 301254

Coordinator Sabine Piller ([https://directory.westernsydney.edu.au/search/name/Sabine Piller/](https://directory.westernsydney.edu.au/search/name/Sabine%20Piller/))

Description This unit introduces the core concepts and terminology necessary to provide a basic understanding of the physiological responses of the human body using relevant examples. These include the processes of homeostasis, cell-cell interactions and the physical and chemical transport processes that are required to carry out integrated functions. Students will explore these key physiological concepts through practical hands-on experiments and in interactive group work in prac and tutorial classes, respectively. The unit provides the foundation to study the physiology of human organ systems.

School Science

Discipline Medical Science

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Incompatible Subjects BIOS 1025 Introduction to Physiology
NATS 1009 Human Anatomy and Physiology 1
BIOS 1022 Introduction to Human Biology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the component parts of a cell and how cell interactions occur
2. Recognise that all physiological systems are interdependent
3. Define the concept of homeostasis and explain how different mechanisms regulate its function
4. Explain physical, chemical and electrical principles of cell communication
5. Recognise structure and function relationships
6. Collect and interpret data from practical classes investigating physiological principles

Subject Content

1. Cell function, membranes, communication and their interdependence
2. Information flow: a. Physical principals of physiology: pressure driven (flow, viscosity and resistance) and electrically driven (force, potential, and currents) b. Chemical principles of physiology: energy, intermolecular forces, gradients and kinetics
3. Homeostasis
4. Interpretation of physiological data

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task

Incompatible Subjects NATS 1013 - Introduction to Anatomy BIOS 1025 - Introduction to Physiology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define and use the scientific and medical terminology of anatomy and physiology to accurately describe the location and function of organs and organ systems of the human body;
2. Describe the levels of structural organisation of the human body;
3. Identify the structure and function of different tissue types and organs;
4. Explain the basic anatomy and physiology of the major body systems including integumentary, skeletal, muscular, nervous, endocrine, cardiovascular, lymphatic, immune, respiratory, digestive, urinary, and reproductive systems
5. Determine the environmental and personal health practices affecting optimal function of human body;
6. Describe the biomechanics of human musculoskeletal system.

Subject Content

1. Scientific and medical terminology in anatomy and physiology
2. Levels of structural organisation of human body
3. Gross structure and function of major organ systems of human body as listed below. Where appropriate, environmental factors and personal health practices affecting optimal function of human body
 - (a) The integumentary system
 - (b) The skeletal system
 - (c) The muscular system
 - (d) The nervous system
 - (e) The endocrine system
 - (f) The cardiovascular system
 - (g) The lymphatic system and immunity

BIOS 1036 Human Development and Disease across the lifespan

Credit Points 10

Legacy Code 401394

Coordinator Katherine Kent ([https://directory.westernsydney.edu.au/search/name/Katherine Kent/](https://directory.westernsydney.edu.au/search/name/Katherine%20Kent/))

Description This unit builds on fundamental assumed knowledge of anatomy and physiology and introduces the study of human disease processes or pathophysiology through the framework of human development as a way of examining growth, health and disease at different stages of the lifespan. General concepts underlying human diseases as well as disorders relating to the lifespan will be studied. Developmental changes in physical, cognitive, social, intellectual, perceptual, personality and emotional growth are discussed. Common communicable and non-communicable, acute, chronic and degenerative health conditions are discussed from a pathophysiological, psychosocial and epidemiological perspective, and their impact on the day to day function of individuals and populations is explored. Risk factors for conditions and disease trajectory are explored at individual and society level, as well as the impact of these conditions on individuals, the health system and wider society.

School Health Sciences

Discipline Human Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Assumed Knowledge

A knowledge of fundamental anatomy and physiology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe physical, cognitive, and psychosocial milestones of human development throughout the lifespan, applying contemporary theories of development;
2. Describe the biological, epidemiology, pathophysiology and course of communicable and non-communicable disease for common acute and chronic health conditions that occur across the lifespan;
3. Demonstrate broad theoretical knowledge of introductory pathophysiology of diseases;
4. Demonstrate ability to interpret and communicate information in different health contexts using appropriate medical terminology;
5. Explain the consequences of selected human condition and diseases for health systems and society;
6. Describe theoretical perspectives on death, dying, grieving and loss;

7. Describe the interplay and relationship between biology, environment and relationships during various stages of the lifecycle;
8. Describe the influences of healthy development across the lifespan

Subject Content

1. Theories and developmental milestones associated with the stages of human development from conception, prenatal development and birth, to infancy, toddlerhood, childhood, adolescence, early, middle, late adulthood and aging
2. The sequence and processes of physical, cognitive, emotional, and social aspects of human development throughout the lifecycle (from conception and prenatal development through death, dying and bereavement)
3. The interplay and relationship between biology, environment and relationships during the various stages of the human lifecycle
4. The influences on healthy development including nutrition, exercise and social and family relationships
5. The impact of unhealthy behaviours such as substance abuse or disease and disability upon development and functioning throughout the life span
6. Theoretical knowledge of disease pathophysiology
7. Explores common diseases from psychosocial, and epidemiological perspectives
8. Particular conditions considered will vary but will include diseases across the communicable, non-communicable, acute, chronic and degenerative conditions
9. Epigenetics
10. Interpret and communicate information in different health contexts using appropriate medical terminology

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

 BIOS 1026 Introduction to Physiology (WSTC)

Restrictions Students must be enrolled at The College. Students enrolled in 7142 Diploma in Health Science Extended and 7143 Diploma in Health Science (HPE) Extended need to have passed 40 CPs of preparatory subjects in order to enrol in this subject. Students enrolled in 6000 Diploma in Health Science/Bachelor of Health Science and 6001 Diploma in Health Science/Bachelor of Health Science (HPE) need to have passed or be enrolled in the preparatory subjects in these programs in order to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define and use the scientific and medical terminology of anatomy and physiology to accurately describe the location and function of organs and organ systems of the human body
2. Describe the levels of structural organisation of the human body
3. Identify the structure and function of different tissue types and organs
4. Explain the basic anatomy and physiology of the major body systems including integumentary, skeletal, muscular, nervous, endocrine, cardiovascular, lymphatic, immune, respiratory, digestive, urinary, and reproductive systems
5. Determine the environmental and personal health practices affecting optimal function of human body
6. Describe the biomechanics of the human musculoskeletal system.

Subject Content

1. Scientific and medical terminology in anatomy and physiology
2. Levels of structural organisation of human body
3. Gross structure and function of major organ systems of the human body as listed below. Where appropriate, environmental factors and personal health practices affecting optimal function of the human body

- (a) The integumentary system
- (b) The skeletal system
- (c) The muscular system
- (d) The nervous system
- (e) The endocrine system
- (f) The cardiovascular system
- (g) The lymphatic system and immunity
- (h) The respiratory system
- (i) The digestive system
- (j) The urinary system
- (k) The reproductive system

4. Biomechanics of human musculoskeletal system

1. Scientific and medical terminology in anatomy and physiology
2. Levels of structural organisation of human body
3. Gross structure and function of major organ systems of the human body as listed below. Where appropriate, environmental factors and personal health practices affecting optimal function of the human body

- (a) The integumentary system
- (b) The skeletal system
- (c) The muscular system
- (d) The nervous system
- (e) The endocrine system
- (f) The cardiovascular system
- (g) The lymphatic system and immunity
- (h) The respiratory system
- (i) The digestive system
- (j) The urinary system
- (k) The reproductive system

4. Biomechanics of human musculoskeletal system

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Quiz	3 quizzes. Up to 60 minutes/quiz	30	N	Individual

Participation	10 weeks	10	N	Individual
Intra-session Exam	90 minutes	25	N	Individual
Final Exam	2 hours	35	N	Individual

Coordinator Jack Isherwood ([https://directory.westernsydney.edu.au/search/name/Jack Isherwood/](https://directory.westernsydney.edu.au/search/name/Jack%20Isherwood/))

Description How many species walk, fly, swim or slither, crawl, hop, wriggle or just float, hitchhike or move so slowly that they appear not to move at all? No one knows and new species appear almost every day. This unit focuses on this spectacular diversity of living things and the process of evolution. Students explore and classify biodiversity and how organisms' function, acquire and assimilate resources and co-ordinate growth and reproduction. Organisms interact with one another and their environment forming a complex set of interactions in ecosystems. It is these interactions that have driven evolution. Ultimately human survival depends on the sustainable use of this biodiversity and ecosystems.

School Science

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BIOS 1003 Biodiversity BIOS 1002 Biodiversity LGYB 0458 Biodiversity (UWSC) BIOS 1001 Biodiversity

Restrictions Students must be enrolled in the following program: 7175, Undergraduate Certificate of Environmental Sustainability

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the characteristics of major biological groups and demonstrate how this information can be used to classify an unknown organism.
2. Explain and provide examples that demonstrate how evolution has given rise to biodiversity.
3. Describe and explain the role of cells, tissues and organs in the structure and function of organisms.
4. Explain how organisms acquire the resources necessary to function.
5. Describe the scientific method and demonstrate how it can be used to test explanations of observations by formulating testable hypotheses and designing experiments.
6. Conduct basic investigations of organisms using microscopy, experimentation and perform data analysis and interpret results.
7. Apply and transfer chemical principles to other contexts such as the origin of life, and how organisms acquire the necessary resources to sustain life.
8. Evaluate data and evidence from scientific literature.

Subject Content

1. The characteristics of living things and the nature of Biodiversity
2. Science as a way of knowing
3. Classification, taxonomy and species
4. Evolutionary theory
5. A survey of the major groups of living things from bacteria, viruses, protists and fungi to plants and animals.
6. Evolutionary development of structure and function
7. The role of living organisms in ecosystems.
8. The Biodiversity crisis
9. Basic light microscopy observing plants, animals and microbes
10. Sorting, organising and classifying organisms
11. Formulation of scientific hypotheses, designing experiments and data analysis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BIOS 2005 Botany

Credit Points 10

Legacy Code 300836

Coordinator Kristine Crous ([https://directory.westernsydney.edu.au/search/name/Kristine Crous/](https://directory.westernsydney.edu.au/search/name/Kristine%20Crous/))

Description From microscopic algae to giant flowering angiosperms, this unit develops students knowledge and understanding of plants on earth. The unit covers the topics of plant anatomy and morphology, classification and systematics, and evolution. Students will examine the major groups of plants: green algae, bryophytes, lycophytes, monilophytes, gymnosperms and angiosperms. Laboratory and field work involves the study of common Australian plants and economically significant plants.

School Science

Discipline Botany

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 1001

Equivalent Subjects LGYB 5440 - Botany LGYA 5941 - Botany

Assumed Knowledge

Basic knowledge of biology, chemistry and ecology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define botany as an area of study and place it in its scientific and social context.
2. Explain how evolutionary processes have led to the diversity of plants.
3. Describe the characteristics of the major groups of plants, and how tools such as microscopy and molecular biology can be used to study them.
4. Explain how botany is used to solve real-world problems such as measuring biodiversity.
5. Conduct botanical investigations safely and ethically in the field and laboratory, using appropriate methodologies correctly to obtain valid data.

- Use spreadsheets and statistical tools in analytical programs to enter, analyse and graph data and to draw appropriate conclusions.
- Communicate findings correctly in written form using an appropriate style, accessing the botanical literature to place the findings in context.

Subject Content

Plant tissues
 Plant morphology
 Plant development
 Plant reproduction and alternation of generations
 Classification and systematics of the major groups of plants
 Plant evolution

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Online Quizzes	20 min per week (10 - 12 weeks)	20	N	Individual
Report on Family Characteristic and plant biodiversity via Virtual Herbarium	1500 words	30	N	Individual
Tasks from tutorials and practicals	1 hour per tutorial/prac	20	N	Individual

Coordinator Sebastian Holmes ([https://directory.westernsydney.edu.au/search/name/Sebastian Holmes/](https://directory.westernsydney.edu.au/search/name/Sebastian%20Holmes/))

Description Building on the underlying physical and chemical principals/laws that define physiology, this unit from both a systems (e.g. Respiratory) and environmental (e.g. Marine) perspective, seeks to compare the functional physiology of organisms at all levels of organisation. Particular attention will be paid to respiration, temperature tolerance & regulation, living in water, sensory and neurophysiology. Students will have the opportunity to carry out a defined research project.

School Science

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 1025 OR
 BIOS 2014 OR
 AGRI 1003 OR
 BIOS 1012 OR
 BIOS 1001

Equivalent Subjects BIOS 2038 - Animal Physiology

Restrictions Successful completion 60 credit points at Level 1 and 20 credit points at Level 2.

Assumed Knowledge

Basic biology, chemistry and maths.

Learning Outcomes

On successful completion of this subject, students should be able to:

- Describe and compare between the different respiratory, excretory and circulatory systems utilised by organisms and discuss how physiological adaptations allow organisms to inhabit extreme environments (eg. deserts & freezing habitats).
- Explain the mass scaling laws with a particular focus on metabolism.
- Describe the physiological adaptations that organisms exhibit living in water with reference to osmoregulation, buoyancy and diving.
- Explain the similarities and differences with phyla in terms of their neurophysiology and sensory organs.
- Explain how different organisms achieve locomotion (movement) and obtain their nutritional requirements (feeding).
- Conduct both independent and group investigations safely and ethically in the field and laboratory, using sampling methodology correctly to obtain valid data.
- Use spreadsheets and statistical tools in analytical programs to enter, analyse and graph data, as to draw appropriate conclusions from data.
- Communicate findings correctly in oral or in written form using an appropriate style, as well as accessing the scientific literature to place the findings in context.

Subject Content

- The integrative (multidisciplinary) nature of physiology and its determination by basic physical and chemical principals/laws;
- The diversity of respiratory (including respiratory pigments) and circulatory systems;
- Nutrition and the different modes of feeding that exist;
- Scaling laws and metabolism;
- The physiological adaptation of organisms to extreme environments (deserts & freezing habitats) including the role of torpor;
- Comparison of nitrogenous excretion across the phyla (ammonia, urea & uric acid);
- Movement: types of skeleton, muscle and motility;
- The adaptation of animals to living in water (buoyancy, osmoregulation & diving);
- Neurophysiology & the diversity of sensory organs and structures exhibited by animals.

Special Requirements

Legislative pre-requisites

Students who opt to enrol in this subject are strongly recommended to obtain a Tetanus vaccination/booster. Students who cannot evidence

vaccination may be precluded from activities on the Farm, and/or internships with third parties.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task

BIOS 2008 Ecology

Credit Points 10

Legacy Code 300839

Coordinator Uffe Nielsen ([https://directory.westernsydney.edu.au/search/name/Uffe Nielsen/](https://directory.westernsydney.edu.au/search/name/Uffe%20Nielsen/))

Description We live in a society where environmental problems dominate public debate. Ecology is one of the sciences required to find solutions to such problems; terms and ideas that came originally from ecology are used in public discussions, and in legislation. This unit will introduce students to ecology: what is studied, how it is studied, what are the strengths and limitations of ecology. Current ecological thinking will be covered, from the scale of individual organisms, through populations, and up to communities and ecosystems. Methods of study will be highlighted using evidence from molecular ecology through to field investigations.

School Science

Discipline Ecology and Evolution

Student Contribution Band HECS Band 2 10cp

BIOS 1012 OR

AGRI 1009 OR

BIOS 1027

Equivalent Subjects LGYB 8458 - Ecology 21 BIOS 2007 - Ecology LGYB 8449 - Ecology 21 (V1)

Assumed Knowledge

Knowledge of first-year university biology satisfactory completion of Biodiversity and Cell Biology or equivalent and the concepts of classification, evolution, taxonomy, cellular processes plant and animal structure and function.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define ecology as an area of study and place it in its scientific and social context
2. Explain how factors can be identified as limits to distribution
3. Describe the ecological concepts of populations, communities and ecosystems, and how tools such as modelling and molecular biology can be used to study them
4. Explain how ecology is used to solve real-world problems such as harvesting from wild populations or managing fire regimes
5. Describe indigenous approaches to the natural world and how these link to modern ecology
6. Conduct ecological investigations safely and ethically in the field and laboratory, using sampling methodology correctly to obtain valid ecological data
7. Use spreadsheets and statistical tools in analytical programs to enter, analyse and graph data and to draw appropriate conclusions from data
8. Communicate findings correctly in oral or in written form using an appropriate style, accessing the scientific literature to place the findings in context

Subject Content

1. Scope of ecology from individual organisms to communities and ecosystems
2. Origin of ecology as a science
3. Indigenous approaches to nature and links to modern ecology
4. Limitations of ecology in studying large, complex systems, with random inputs, and a low level of understanding of how they work
5. Limits to distribution of species - dispersal, habitat selection, abiotic and biotic factors

6. Investigations of limits of dispersal eg transplant experiments, physiological response studies
7. Population studies - definition, methodology, life tables as a tool, genetic and evolutionary approaches
8. Population growth - exponential and logistic growth, factors that cause fluctuations in population numbers eg density dependence, time lags, stochastic variation in vital parameters. Stochastic vs. Deterministic models of population growth
9. Biotic interactions in populations - competition, predation, herbivory, beneficial associations
10. Experimental tests of biotic interactions
11. Applied ecology - harvesting from wild populations, fire ecology, molecular ecology
12. Community ecology - definitions, models of how communities function and change eg succession, patch dynamics, equilibrium and non-equilibrium models
13. Ecosystem ecology - primary and secondary production, introduction to biogeochemical cycles.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BIOS 2011 Exercise Nutrition, Body Composition and Weight Control

Credit Points 10

Legacy Code 400884

Coordinator Peter Clothier ([https://directory.westernsydney.edu.au/search/name/Peter Clothier/](https://directory.westernsydney.edu.au/search/name/Peter%20Clothier/))

Description In 2016, this unit is replaced by 401141 - Exercise Nutrition. This unit provides students with an understanding of the interdependent areas of nutrition, body composition and body weight control within the context of sport, physical activity, and exercise. Nutritional needs and recommendations for all levels and types of physical activity are covered along with the links between nutrition and health, body composition, control of body weight and composition. Students will develop skills in nutritional analysis, body composition assessment and the development of exercise programs for weight control. Students will use these skills and knowledge in the individualisation of advice on exercise nutrition and body composition control.

School Health Sciences

Discipline Human Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 1009 AND
NATS 1010 AND
BIOS 1015

Restrictions Students must be enrolled in 4658 Bachelor of Health Science (Sport and Exercise Science).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the dietary guidelines and the recommended servings of the core food groups recommended by the National Health and Medical Research Council and other internationally recognized governing bodies.
2. Describe the physiological functions of the macronutrients (carbohydrates, fats and protein) and micronutrients (vitamins, minerals and water).
3. Analyze a diet for its energy, macronutrient and micronutrient content, as well as describe the strengths, weaknesses and limitations of the commonly used methods for measuring and analyzing dietary intake.
4. Describe and discuss the role of nutrition and ergogenic supplements in optimizing exercise performance.
5. Describe the assumptions and limitations of common methods body composition assessment including BMI, waist hip ratio, skinfolds, body composition estimates (from regression equations) and other indices, and demonstrate the knowledge and ability to use a range of body composition and anthropometry measures to service athletes, apparently healthy and obese individuals.
6. Explain the relationship between energy balance and control of body composition.
7. Provide general nutrition advice to promote, achieve and maintain healthy and sport performance related body weights.
8. Explain the nutritional, health and psychological risks of common fad and popular diets.
9. Explain the importance of behavioral modification and other strategies to help individuals to incorporate and adhere to appropriate dietary strategies that support achieving and maintaining a healthy body mass.

Subject Content

1. General dietary guidelines and recommendations for health and physical performance

2. Dietary analysis: methods, applications and limitations of methods
3. Digestive processes and nutrient absorption kinetics
4. Physiological function of macronutrients and micronutrients with an emphasis on their roles related to energy metabolism and exercise
5. Methods of measuring, estimating and interpreting body composition
6. Body mass, fat mass, fat distribution and disease risk
7. Estimating individual energy requirements and energy expenditure
8. Sport-specific nutrition and hydration for optimizing performance, recovery & physiologic adaptation
9. Nutritional supplements and ergogenic aids
10. Nutritional disorders: prevalence, signs, symptoms and key physiological effects
11. Discipline specific OH&S ? related to practical tasks of the unit

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have:

- 1) submitted a Student Undertaking Form and have applied for a National Police Certificate;
- 2) submitted Working with Children Check Student Declaration;
- 3) possess a current WorkCover Authority approved First Aid Certificate.

Pre-requisite(s) NATS 1009 AND
NATS 1010 AND
SPRT 1001 AND
NATS 1022

Equivalent Subjects BIOS 2037 - Sport and Exercise Physiology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain how the central nervous system controls muscle force during common types of movement and exercise.
2. Explain how the cardiovascular system adjusts to exercise and how it supports the increased muscular work.
3. Explain how the respiratory system adjusts to exercise and how it supports the increased muscular work.
4. Explain how body temperature is regulated during exercise.
5. Explain the signs and symptoms of heat stress during exercise using the understanding required in the above-mentioned learning outcomes (#1-4).
6. Analyse and interpret physiological data recorded during an exercise experiment.
7. Collate and organise experimental observations in a simple, neat and useful manner.

Subject Content

1. Overview of the essential physiology of movement and exercise, including metabolism (covered in Bioenergetics).
2. Neuromuscular physiology and exercise.
3. Cardiovascular physiology and exercise.
4. Respiratory physiology and exercise.
5. Thermoregulation and exercise.
6. Integrative physiology, exercise and heat stress.
7. Laboratory classes focused on ergometry and the recording, analysis and interpretation of neuromuscular, cardiovascular, respiratory and thermal responses during rest and exercise.

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and complete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- <http://training.gov.au> (<http://training.gov.au/>)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Quiz	Up to 90 minutes	20	N	Individual
Log/Workbook	Manual requires six completed handouts and figures as identified in each handout.	20	N	Individual
Final Exam	2 hours	60	Y	Individual

BIOS 2014 Functional Proteins and Genes

Credit Points 10

Legacy Code 300936

Coordinator Patrick O'Doherty ([https://directory.westernsydney.edu.au/search/name/Patrick ODoherty/](https://directory.westernsydney.edu.au/search/name/Patrick%20ODoherty/))

Description Biochemistry is the study of the chemistry of life. By understanding the structure and roles of biological macromolecules found in cells students will develop the concept of self assembly of these molecules to form life. Topics include the structure of carbohydrates, lipids, proteins, and nucleic acids and how they function in the lipid and aqueous environments of the cell. Basic metabolism is introduced with an overview of the major pathways in cells, mechanisms of regulation, and an introduction into important cofactors and intermediary molecules. These concepts will be reinforced through practical classes that teach critical skills in experimental design, analysis and interpretation.

School Science

Discipline Biochemistry and Cell Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 1012 AND CHEM 1005

Equivalent Subjects BIOS 2001 - Biochemistry 1 BIOS 2036 - Proteins and Genes

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain biologically important chemical bonds and functional groups and describe their interaction.
2. Recognise and describe the structure of monomeric units of major biomolecules in a cell.
3. Explain how complex biomolecules form through polymerisation, chemical modification or aggregation of these monomeric units form complex functional or structural molecules.
4. Discuss key metabolic processes, their control and cellular location.
5. Relate different biomolecules to different cellular structures and processes.
6. Handle biomolecules for analysis in a laboratory.
7. Collect, record and analyse laboratory data in a lab book consistent with legal standards.
8. Be able to perform basic biochemical calculations (mole calculations, dilutions, unit conversion, standard curve and basic enzymatic calculations).
9. Work as a member of a group.

Subject Content

1. Overview of Biochemistry

- The cell, groups of important biomolecules, bonds, Functional groups, genes to proteins

- The aqueous environment

2. Biomolecules - Lipids

- The Chemistry and structure of fatty acids

- Membranes: phospholipids and glycolipids

3. Biomolecules - Introduction to Carbohydrates and Glycobiology

- The Chemistry and nomenclature of mono, di and polysaccharides

- Heteropolysaccharides: cellulose, starch, glycogen and The extracellular matrix

4. Biomolecules - Nucleic acids

- Ribose, deoxyribose, phosphodiester bonds, bases

- structural differences between RNA and DNA

5. Biomolecules - Proteins

- Amino acids: functional groups; acid base properties; symbols

- structure of proteins: peptide bonds, protein folding, pictorial representation of protein structure

- Classification and functions of proteins

- protein Packaging and post translational modification

- protein degradation

6. Introduction to metabolism

- Overview of anabolic and catabolic pathways and their regulation

- Characteristics of enzymes: active sites; catalytic principles; Basic enzyme kinetics

- introduction to important branch Point, High energy compounds and co-Factors

7. Quantitative aspects of Biochemistry

- handling and Analysing biomolecules in A laboratory

- developing independence in data organisation, recording and calculations

- maintaining A legal Standard laboratory note book

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Final Examination	2 hours	50	Y	Individual
Written Assignment - research assigned protein	Max 500 words	10	N	Individual
Laboratory Component - (a) Laboratory Book completeness/ correctness, (b) Practical Skills Quiz	Throughout semester	20	N	Individual

Quiz - (a) Post-laboratory questions (online), (b) Functional Molecules Quiz	Throughout semester	20	N	Individual
--	---------------------	----	---	------------

Coordinator Michael Phillips ([https://directory.westernsydney.edu.au/search/name/Michael Phillips/](https://directory.westernsydney.edu.au/search/name/Michael%20Phillips/))

Description Microorganisms play a crucial role in soil and water ecosystems, in health and disease of plants and animals, including humans, as well as in industries such as the food and brewing industries. The unit builds on students existing knowledge of cell biology and biodiversity, and explores the characteristics of microorganisms, the conditions required for their growth and survival, methods of control and their significance in the environment, health and industry. The theory and practice of microbiology are integrated in the laboratory component in which students learn techniques of handling, observing, growing and counting microorganisms.

Assumed Knowledge

Knowledge of introductory biology, especially an understanding of the diversity of living organisms and basic concepts of cell structure and function is essential for students undertaking this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Compare the characteristics and habitats of the major groups of microorganisms.
2. Describe and discuss the factors that favour growth and survival of microorganisms and apply this knowledge to cultivation, control and elimination of microorganisms.
3. Explain the beneficial and detrimental roles of microorganisms in soil and aquatic environments, in human health and the food industry.

- Discuss epidemiology and control of selected diseases in the Australian context.
- Access and interpret relevant research literature and communicate microbiological concepts in written form.
- Work within Workplace Health and Safety guidelines in a group to perform basic microbiological techniques to characterise and enumerate microorganisms.
- Analyse and report microbiological data and interpret it in the context of Australian standards/guidelines.

Subject Content

- The characteristics of the major groups of microorganisms and their relationship to other living organisms.
- Requirements for microbial growth.
- Physical and chemical methods of control of microorganisms.
- Introduction to microbial ecology: interactions between microorganisms and other microbes, plants and animals.
- Human-microbial interactions; normal microbiota and pathogens.
- Epidemiology of communicable diseases.
- Introduction to environmental microbiology: microbiology in the aquatic environment and in soils.
- The significance of microorganisms in the food and wine industries.
- Microbiological techniques: aseptic technique, culturing of bacteria, microscopic examination of microorganisms, enumeration of microorganisms in environmental samples and foods.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Coordinator Graham Jones ([https://directory.westernsydney.edu.au/search/name/Graham Jones/](https://directory.westernsydney.edu.au/search/name/Graham%20Jones/))

Description Our ability to rapidly and cheaply sequence a genome, ranging from humans, to native and domesticated plants and animals, and infectious bacteria and viruses, has revolutionised the field of genetics. More than ever, we understand our genetic relationship to

life on earth, uncovering surprising similarities between our genome and the genomes of small worms and fruit flies. This unit will compare the genomes of different organisms and apply the methodology and theory of modern genetics to understand how the diversity of genetic variability impacts the structure and evolution of genomes, the expression of genes, and ultimately on the health and form of an organism.

School Science

Discipline Genetics

Pre-requisite(s) BIOS 1012 OR
BIOS 1001 OR
AGRI 1009

Equivalent Subjects LGYB 5446 - Genetics 22 BIOS 2019 - Human Genetics BIOS 2017 - Genetics

Learning Outcomes

On successful completion of this subject, students should be able to:

- Summarise features of the human genome, and compare and contrast the human genome with the genomes of selected plant, animal and pathogen genomes
- Describe the basic principles of genetic and epigenetic control of gene expression
- Apply your knowledge of genomes and DNA sequencing methodologies to the bioinformatic analysis of DNA sequences
- Explain the origin and frequency of common and rare genetic variants
- Correlate genetic variability with phenotypic variability in health and disease
- Apply your knowledge of genetic variation in different contexts to identify regions of a genome that are associated with specific phenotypes
- Analyse and critically evaluate genetic data and present this in the form of a written report

Subject Content

- Genome structure: compare and contrast the human genome with the genomes of model plant and animal genomes, as well as bacterial and viral genomes
- Decoding the genome: Sanger and Next-generation DNA sequencing
- Annotating the genome: genes and genetic switches; coding and non-coding DNA; transcription and open reading frames
- Introduction to Bioinformatics: homology search and alignments; translation, mutations and reading frames
- Genetic variants, health and disease: repeat sequences, translocations, aneuploidy, smaller insertions, deletions and substitutions
- Controlling the genome, an introduction to epigenetics: DNA methylation (X-inactivation, imprinting, gene transcription); the histone code and chromatin packaging
- Single gene and polygenic traits: pedigrees, populations, penetrance and effect sizes
- Gene and trait mapping: recombination, linkage and linkage disequilibrium with worked examples from humans (Mendelian disease and population genetics), plants (plant breeding) and animals (ecology and conservation)
- Genomes and the environment: host-pathogen interactions and selection in genomes

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Quiz	Short answer, 20 max. 500 words. Use online tools to carry out DNA sequence alignments (DNA conservation, identification of genetic variants)		N	Individual
Quiz	Short answer, 20 max. 500 words. Complete online exercises to investigate the concept of genetic linkage		N	Individual
Report	Complete a series of laboratory experiments, enter and analyse results in an online electronic laboratory notebook	30	N	Individual
Case Study	1000-word report. Students will be provided with a number of research papers from different disciplines that relate to the unit content: select one discipline, review and analyse.	30	N	Individual

Credit Points 10

Legacy Code 300848

Coordinator Ming Wu ([https://directory.westernsydney.edu.au/search/name/Ming Wu/](https://directory.westernsydney.edu.au/search/name/Ming%20Wu/))

Description Organisms degrade food molecules to generate energy and converts excess food molecules into internal fuel stores. This unit will cover topics including: bioenergetics; the structures of key molecules; glycolysis, gluconeogenesis, glycogen synthesis and breakdown; fatty acid oxidation and synthesis; amino acid catabolism; urea synthesis; citric acid cycle; electron transport and oxidative phosphorylation. Emphasis will be on the regulation and integration of these pathways, including their responses to hormonal regulation. The effects of altered dietary and hormonal status on metabolic pathways and their consequences for the organism will be discussed.

School Science

Discipline Biochemistry and Cell Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 2014

Equivalent Subjects BIOS 2002 - Biochemistry 2 CHEM 2005 - Human Metabolism Disease

Incompatible Subjects LGYA 5859 - General Biochemistry

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the molecular mechanisms by which dietary macromolecules (carbohydrates, lipids, proteins) are metabolised to generate energy or, alternatively, to store energy.

- Demonstrate an understanding of the mitochondrial electron transport system and the mechanism by which this system is coupled to ATP synthesis in oxidative phosphorylation.
- Describe the different roles of the major tissues in energy metabolism. Know the general structural types and functional classifications of regulatory molecules such as hormones, growth factors, cytokines, neurotransmitters.
- Explain how disruption of a metabolic pathway affects changes in other metabolic pathways in order to maintain homeostasis.
- Demonstrate competency in; biochemical techniques, use of standard biochemical equipment, graphical skills, biochemical calculations and utilization of professional databases in the research, diagnostic, treatment and policy sectors.
- Organise, present and interpret experimental observations in clear, concise written and spoken English. Identify, retrieve, read and analyse scientific literature relevant to the study of metabolism.
- Demonstrate competency of time management through identifying milestones and reporting progress against milestones in accordance with human resource management and industry expectations.

Subject Content

- Carbohydrate metabolism, including pathways of glycolysis, gluconeogenesis, glycogen metabolism; their metabolic and hormonal regulation.
- Lipid metabolism, including the fate of dietary lipid, fatty acid oxidation and synthesis, the regulation of fat metabolism, and the relationship between fat metabolism and carbohydrate metabolism in animals and plants.
- Amino acid metabolism, including degradation and the fate of carbon skeletons (glucogenic and ketogenic amino acids) and amino groups (urea cycle).
- The citric acid cycle, its role in energy metabolism and its regulation.
- Electron transport and oxidative phosphorylation, including the structure and function of ATP synthase.
- Integration of pathways of carbohydrate, fat and amino acid metabolism; the different roles of individual tissues in metabolism; regulation in response to dietary and disease states; maintenance of biochemical homeostasis.
- Hormone regulation of metabolic processes in health and disease.
- Design, conduct and interpret biochemical assays including detection of metabolites and hormones in biological samples.
- Identify the nature of specificity, sensitivity and reproducibility when selecting and using biochemical assays to discriminate between healthy or disease states.
- Engage and interpret professional literature, including database access and interpretation.
- Time management, organisation and communication through team work activities as it relates to leadership responsibilities

Assessment

Coordinator Michelle Moffitt ([https://directory.westernsydney.edu.au/search/name/Michelle Moffitt/](https://directory.westernsydney.edu.au/search/name/Michelle%20Moffitt/))

Description In this unit students will use an inquiry-based approach to explore the origin and diversity of microorganisms and their significance in the environment, in foods and industry as well as in health and disease. Students will be introduced to the structure, reproduction, classification, cultivation and enumeration of bacteria, viruses, fungi and protists. The conditions required for growth and survival of microorganisms will be studied as well as physical and chemical methods of control. In laboratory classes students will develop skills in culturing and observing microorganisms and in designing experiments to test microbiological concepts. This unit is a pre-requisite for Microbiology 2 and Level 3 Microbiology units.

School Science

Discipline Microbiology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BIOS 2023 - Microbiology 1

Incompatible Subjects BIOS 2015 - General Microbiology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and compare the major groups of microorganisms in terms of their structure, reproduction and techniques for cultivation in the laboratory.
2. Describe and discuss the factors that favour growth and survival of microorganisms
3. Explain the key roles of microorganisms in the environment, health and industry.
4. Use knowledge of microorganisms to ensure their appropriate control in public sanitisation, food and environmental industries and treatment of human infection with antibiotics
5. Conduct basic investigations in microbiology within Workplace Health and Safety guidelines and using techniques such as aseptic technique, microscopy, culturing and enumeration and interpret the data.
6. Design, perform, critically evaluate and report an experiment in microbiology using the scientific method.
7. Work effectively in a group to design and perform experiments.
8. Communicate microbiology concepts in oral and written form.

Subject Content

1. The history and scope of microbiology
2. Evolution, diversity and significance of microorganisms and their classification and identification
3. Structure, function and reproduction of prokaryotic and eukaryotic microorganisms and viruses
4. Microbial nutrition and growth
5. Methods used to control microbial growth
6. Principles of scientific method and experimental design to solve problems in microbiology
7. Techniques for observing, growing and enumerating microorganisms

Legacy Code 300896

Coordinator Oliver Morton ([https://directory.westernsydney.edu.au/search/name/Oliver Morton/](https://directory.westernsydney.edu.au/search/name/Oliver%20Morton/))

Description The unit focuses on the origins of genetic variation and the process of gene regulation in prokaryotes and explores the metabolic diversity of microorganisms from a variety of habitats and their application in industry and biotechnology. Using published scientific literature, students will learn how scientists research functional microbial physiology in the postgenomic era. The principles and applications of recombinant DNA techniques are discussed. Laboratory classes introduce students to techniques used to study microbial physiology and biotechnology based on microbial metabolism, such as examining the activity of antimicrobials and biotechnology such as microbial fuel cells.

School Science

Discipline Microbiology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 2022

Equivalent Subjects BIOS 2025 - Microbiology 2

Assumed Knowledge

Knowledge of the major groups of microorganisms and their structure and functions including DNA and key metabolic pathways.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss and compare examples of the metabolic strategies used by prokaryotes to survive in a wide range of environments and their application in industry

2. Explain the origins of genetic diversity in bacteria and how genes are regulated
3. Describe how recombinant DNA technology is used as a tool to address a range of biological questions
4. Describe and apply biochemical and molecular techniques used in the identification of an unknown microorganism and analyse the results
5. Perform basic techniques employed in the study of microbial physiology and genetics both individually and as a team
6. Analyse and interpret scientific literature and effectively communicate ideas

Subject Content

1. Microbial genomics reveals potential metabolic pathways used by an organism

Prokaryotes use diverse metabolic strategies to obtain energy (aerobic and anaerobic respiration, photosynthesis, and fermentation) and use these in biosynthesis. Metabolism can also be harnessed for biotechnology to make microbial fuel cells, biofuels, industrial chemicals, and foods.

3. Prokaryotes regulate gene expression in response to external and internal cues and/or signals

Microorganisms can be classified and identified using biochemical, immunological, and genetic tests. These methods can also be used to examine mechanisms of microbial evolution.

5. Recombinant DNA technology is used as a tool to address a range of biological questions

Assessment

Coordinator Oula Ghannoum ([https://directory.westernsydney.edu.au/search/name/Oula Ghannoum/](https://directory.westernsydney.edu.au/search/name/Oula%20Ghannoum/))

Description Plants are the primary producers of terrestrial ecosystems and moderators of climate change. This unit introduces students to how plants grow and interact with their environment. Students will learn how leaves turn sunlight energy into sugars; stems transport water, solutes and organic compounds; roots acquire water and mineral nutrients by themselves or in association with soil microbes; and hormones regulate plant development and responses to the environment. This knowledge set is crucial for managing our Century's key challenges of food security and climate change. Students will be required to travel to the Hawkesbury campus where the practicals take place.

School Science

Discipline Botany

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects LGYA 5946 - Introductory Plant Physiology BIOS 2033 - Plant Physiology

Assumed Knowledge

Sound knowledge of biology and chemistry equivalent to undergraduate Level 1 subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the basic plant structures: cell, leaf, stem, root
2. Explain the fundamental processes of photosynthesis, including the light-dependent and light-independent reactions
3. Explain the principles of leaf gas exchange, including how the environment regulates the trade-off between carbon gain and water loss in higher plants
4. Explain the principles of plant water relations, and of water and nutrient uptake and transport
5. Describe the main principles of plant mineral nutrition, and explain the role of key plant-microbe interactions in plant nutrition
6. Describe the basic principles of plant growth and development, including the role of hormones in controlling plant growth, development and environmental responses.
7. Record accurate and valid measurements, critically analyse experimental results and synthesise findings to reach valid conclusions.
8. Communicate orally and in writing the findings of scientific investigations and contemporary issues in plant physiology incorporating findings from the literature through literature surveys on a specific topic

Subject Content

1. Module 1: Leaf structure and function
 - a. Leaf structure
2. Module 2: Leaf ecophysiology
 - c. Leaf gas exchange and the environment
 - d. Photosynthetic pathways and ecology
3. Module 3: Stem structure and function
 - a. Stem structure and plant water relations
 - b. Water and assimilate transport
4. Module 4: Root structure and function
 - a. Root structure and mineral nutrition
 - b. Plant-microbe interactions
5. Module 5: Plants and the environment
 - a. Plant hormones and development
 - b. Plant hormones and responses to the environment.

Legacy Code 300980

Coordinator Paul Rymer ([https://directory.westernsydney.edu.au/search/name/Paul Rymer/](https://directory.westernsydney.edu.au/search/name/Paul%20Rymer/))

Description This unit is designed to impart an understanding of the core concepts in modern evolutionary theory, and an appreciation of the central position it plays in unifying all sub-disciplines of biology. The unit will cover modern synthesis, phylogenetics, phylogeography, origin of variation, genetic drift, natural selection, and coevolution, with a major emphasis on evolutionary mechanisms and analytical techniques.

School Science

Discipline Ecology and Evolution

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 1001 AND BIOS 1012

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define evolution and provide supporting evidence
2. Explain the concepts of natural selection, biological adaptation and speciation
3. Assess the relative importance of neutral and selective processes in population divergence and speciation
4. Determine the direction and strength of migration, and the origin of genetic variation
5. Construct and interpret evolutionary phylogenies according to the concepts of common ancestry and parsimony of derived characters
6. Test the importance of interactions in driving trait shifts in a geographic context
7. Critically assess and interpret scientific literature, and advances in the field of research
8. Design, execute, analyse and interpret scientific experiments
9. Communicate the findings of investigations and experiments in oral and written form
10. Analyse the application of evolutionary theory to many modern issues, including (but not limited to) infectious disease, human behaviour, and genetic engineering

Subject Content

This subject provides a framework for understanding the concepts of evolutionary biology. It offers an overview of the subject by focusing on the nature of species and how they interact in ecological systems to drive evolutionary change. Students will examine evolutionary theory and supporting evidence from the fossil record, embryonic development, to DNA. Techniques in inferring phylogenetic relationships, estimating divergence times, trait evolution and origin of variation will be applied. Other subjects to be discussed include the role of biodiversity, development, evolution of sex, cooperation and behaviour, infectious disease, coevolution and human evolution. The subject will have four major topics following the selected textbook, which will be taught over 3 weeks (delivery online modules & quizzes, 3 x 2hr lecture, 1-2 lab/workshop) with 3-4 concepts to explore where specific techniques and examples will be demonstrated/provided.

1. Foundations of Evolutionary Biology
 - An Overview of evolutionary biology
 - Darwin and natural selection
 - Phylogeny and evolutionary history
2. Evolutionary Genetics
 - sources of Genetic variation
 - The Genetics of populations
 - quantitative Genetics
 - Genome evolution
3. The History of Life
 - The origin and evolution of life
 - major transitions
 - evolution and development
 - species and Speciation
4. Adaptations
 - The evolution of sex
 - sexual selection
 - The evolution of Sociality
 - coevolution

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Mid-term Online tests - 4 online multiple choice tests through vUWS (5% each test)	1 hour (open book and done in own time)	20	N	Individual
Critical review of published article	5min and questions	10	N	Individual
Practical assessment - Short answer in class assessment	200 words	10	N	Individual
Scientific Report	2,000 words	20	N	Individual
Final Exam - combination of multiple choice and short answer questions	2 hours	40	N	Individual

Teaching Periods

BIOS 2035 Principles of Zoology

Credit Points 10

Legacy Code 300979

Coordinator Kate Umbers ([https://directory.westernsydney.edu.au/search/name/Kate Umbers/](https://directory.westernsydney.edu.au/search/name/Kate%20Umbers/))

Description Explores the diversity of invertebrate and vertebrate life in a phylogenetic context. Taxonomy, anatomy, ecology, ethology and physiology of major groups of animals are examined. Patterns will be examined from an evolutionary perspective and the unit will focus on structure and function to examine specialisations and adaptations of animals to their environment. The unit will use lectures and laboratory sessions to allow an interactive appreciation of the diversity of biological mechanisms and processes in the Animal Kingdom.

School Science

Discipline Zoology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 1001

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the Phylum and Class to which any animal belongs, and within certain Classes, identify its Order;

2. Place animal Phyla in an evolutionary sequence, using evidence derived from body architecture, symmetry and internal complexity;
3. Explain reproductive mechanisms and life-cycles of animals in relation to lifestyle and habitat;
4. Characterise each of the major animal Phyla and constituent Classes in terms of their distinguishing features; relate physiological complexity to phylogenetic sequence;
5. Analyse the reasons for the success and diversity of the arthropods and vertebrates;
6. Dissect, identify and describe the function of major internal organs or structures of invertebrates and vertebrates;
7. Analyse and present data and communicate key findings.

Subject Content

1. Porifera & Cnidaria
2. Platyhelminthes, Nematoda & Annelida
3. Mollusca
4. Arthropoda
5. Echinodermata
6. Molluscs
7. Segmented Worms & Pseudocoelomates
8. Arthropods and Echinoderms
9. Lower Chordates & Fishes
10. Amphibians
11. Reptiles
12. Birds
13. Mammals

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Recorded Presentation (video or audio)	3 mins	35	N	Individual
Quiz	up to 30 mins per quiz	30	N	Individual
Final Exam - Online multiple choice and open answer questions	2 hours	35	N	Individual

Teaching Periods

BIOS 2040 Invertebrate Zoology

Credit Points 10

Legacy Code 301256

Coordinator Scott Johnson ([https://directory.westernsydney.edu.au/search/name/Scott Johnson/](https://directory.westernsydney.edu.au/search/name/Scott%20Johnson/))

Description More than 99% of animals are invertebrates and due to their key role in all ecosystems, renowned biologist E. O. Wilson famously described them as the 'little things that run the world'. Besides their ecological importance, many invertebrates are useful to humans, whereas others are harmful to agriculture, human and veterinary health. This unit introduces invertebrate diversity in the context of their ecological and economic importance. It also develops skills necessary to classify and distinguish between the major invertebrate taxa. This unit includes fundamental hands-on laboratory and field studies skills for students with broad career pathways in science (e.g. animal, environmental, forensic and medical sciences) as well as agriculture, environmental management, and education.

Equivalent Subjects NATS 3026 Forensic Biology BIOS 2035 Principles of Zoology

Incompatible Subjects BIOS 3017 Invertebrate Biology

Assumed Knowledge

A basic understanding of core concepts of biology and/or zoology is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe how the ♦etree of life♦f concept applies to identification and classification of invertebrate taxa.
2. Compare and contrast reproduction, behaviour, physiology, development, lifecycles, morphology and anatomy of the major invertebrate taxa.
3. Develop the knowledge and skills to identify and classify major invertebrate taxa.
4. Describe invertebrate biodiversity in an ecological and evolutionary context.
5. Describe the concepts and evaluate the roles and interactions of invertebrates in the human and natural environments.
6. Describe the major principles of invertebrate conservation and major threats to invertebrates.
7. Develop communication skills in presenting information on the scientific method as it relates to invertebrates and results of scientific studies in an engaging format.

Subject Content

1. Introduction to the principles and concepts underpinning invertebrate diversity
2. Reproduction, behaviour, physiology, development and lifecycles of the major invertebrates orders
3. Classification, morphology and anatomy of the major invertebrate taxa
4. Introduction to applied invertebrate ecology in human and natural environments
5. Engaging communication formats to present scientific information.

Special Requirements

Legislative pre-requisites

Students who opt to enrol in this subject are strongly recommended to obtain a Tetanus vaccination/booster. Students who cannot evidence vaccination may be precluded from activities on the Farm, and/or internships with third parties.

Assessment

BIOS 2041 Vertebrate Zoology

Credit Points 10

Legacy Code 301257

Coordinator Christopher Turbill ([https://directory.westernsydney.edu.au/search/name/Christopher Turbill/](https://directory.westernsydney.edu.au/search/name/Christopher%20Turbill/))

Description This unit examines the functional ecology and diversity of vertebrate animals (fish, amphibians, reptiles, birds and mammals). It combines anatomy, physiology, ecology and behaviour, to explain how vertebrates survive and reproduce in relation to their environment. We will uncover the evolutionary relationships among vertebrate groups, and examine their adaptations to different environmental challenges. The unit also explores patterns in vertebrate diversity, with a focus on Australian ecosystems. Students further develop their knowledge of the scientific method to conduct their own project to investigate how environmental factors influence vertebrate animal abundance and diversity. Students may be required to travel to another campus to undertake this unit.

School Science

Discipline Zoology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 1001

Incompatible Subjects BIOS 3023 Vertebrate Biodiversity

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the morphological and physiological characteristics that define vertebrate animals
2. Describe the processes and explain patterns in the phylogenetic (evolutionary) history and current diversity of vertebrate animals
3. Compare and contrast the structure and function of major body systems in vertebrate animals to understand their evolution in response to different environmental challenges
4. Interpret the ecological function of variation in morphological, physiological and behavioural traits among vertebrate animals in relation to their environment, especially from an Australian perspective
5. Review the diversity of vertebrate animal species and identify human-induced environmental changes that threaten the viability of animal populations
6. Apply the scientific method and work collaboratively to conduct and analyse a research project addressing the environmental factors that determine the diversity and abundance of vertebrate animal species

Subject Content

- Structure and function of major vertebrate animal groups
- Evolutionary relationships among vertebrate animal groups
- Diversity of vertebrates, around the world and in Australia
- Functional ecology of vertebrates in Australian ecosystems
- Application of scientific method to study vertebrates in relation to their environment

Special Requirements

BIOS 2042 Biochemistry

Credit Points 10

Legacy Code 301460

Coordinator Roland Gamsjaeger ([https://directory.westernsydney.edu.au/search/name/Roland Gamsjaeger/](https://directory.westernsydney.edu.au/search/name/Roland%20Gamsjaeger/))

Description Biochemistry is the study of the chemistry of life. By understanding the structure and roles of biological macromolecules found in cells students will develop the concept of self assembly of these molecules to form life. Topics include the structure of carbohydrates, lipids, proteins, and nucleic acids and how they function in the lipid and aqueous environments of the cell. Basic metabolism is introduced with an overview of the major pathways in cells, mechanisms of regulation, and an introduction into important cofactors and intermediary molecules. These concepts will be reinforced through practical classes that teach critical skills in experimental design, analysis and interpretation.

School Science

Discipline Biochemistry and Cell Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 1012 AND CHEM 1012

Equivalent Subjects BIOS 2001 - Biochemistry 1 BIOS 2036 - Proteins and Genes BIOS 2014 - Functional Proteins and Genes

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain biologically important chemical bonds and functional groups and describe their interaction.
2. Recognise and describe the structure of monomeric units of major biomolecules in a cell.
3. Explain how complex biomolecules form through polymerisation, chemical modification or aggregation of these monomeric units form complex functional or structural molecules.
4. Discuss key metabolic processes, their control and cellular location.
5. Relate different biomolecules to different cellular structures and processes.
6. Handle biomolecules for analysis in a laboratory.
7. Collect, record and analyse laboratory data in a lab book consistent with legal standards.

8. Be able to perform basic biochemical calculations (mole calculations, dilutions, unit conversion, standard curve and basic enzymatic calculations).
9. Work as a member of a group.

Subject Content

1. Overview of Biochemistry
 - The cell, groups of important biomolecules, bonds, Functional groups, genes to proteins
 - The aqueous environment
2. Biomolecules - Lipids
 - The Chemistry and structure of fatty acids
 - Membranes: phospholipids and glycolipids
3. Biomolecules - Introduction to Carbohydrates and Glycobiology
 - The Chemistry and nomenclature of mono, di and polysaccharides
 - Heteropolysaccharides: cellulose, starch, glycogen and The extracellular matrix
4. Biomolecules - Nucleic acids
 - Ribose, deoxyribose, phosphodiester bonds, bases
 - structural differences between RNA and DNA
5. Biomolecules - Proteins
 - Amino acids: functional groups; acid base properties; symbols
 - structure of proteins: peptide bonds, protein folding, pictorial representation of protein structure
 - Classification and functions of proteins
 - protein Packaging and post translational modification
 - protein degradation
6. Introduction to metabolism
 - Overview of anabolic and catabolic pathways and their regulation
 - Characteristics of enzymes: active sites; catalytic principles; Basic enzyme kinetics
 - introduction to important branch Point, High energy compounds and co-Factors
7. Quantitative aspects of Biochemistry
 - handling and Analysing biomolecules in A laboratory
 - developing independence in data organisation, recording and calculations
 - maintaining A legal Standard laboratory note book

BIOS 3001 Advanced Cell Biology

Credit Points 10

Legacy Code 300850

Coordinator Mark Jones ([https://directory.westernsydney.edu.au/search/name/Mark Jones/](https://directory.westernsydney.edu.au/search/name/Mark%20Jones/))

Description Cells of the body are studied in the context of health and disease, including mechanisms by which cells respond to the environment and integrate in and around tissue. Fundamental cellular processes are discussed that are important in embryonic development, stem cells, haematology and cancer. This unit investigates the action of hormones, growth factors and morphogens; their receptors and signalling pathways and the cellular responses they trigger. This unit covers modern techniques in cell culture, tissue engineering, advanced microscopy and other modern experimental approaches that enable dynamic understanding of live cell function.

School Science

Discipline Biochemistry and Cell Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 2021 OR
BIOS 2014 OR
BIOS 2026 OR
BIOS 2020

Equivalent Subjects LGYA 6014 - Mammalian Cell Biology and Biotechnology BIOS 3011 - Cell Signalling

Incompatible Subjects LGYA 5857 - Cell Signalling and Molecular Immunology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe detailed microscopic appearance of eukaryotic cells and their specialization, from stem cells to blood and tissue.
2. Explain the compartmentalization of molecules and their transport throughout the cell.
3. Explain the interrelationship of cells with their immediate environment including adjacent cells, the extra-cellular matrix, and the cytoskeleton.
4. Describe the molecular events, regulated by receptors and signal transduction pathways, cells activate following stimulation.
5. Describe the development of cells (e.g. haematopoiesis), their identification, morphology and function in the context of haematology.
6. Explain the detailed microscopic characterization of eukaryotic cells in blood and tissue, including the use of confocal microscopy and fluorescence correlation spectroscopy.
7. Demonstrate technical and interpretive skills for cell culturing, including cell characterization using advanced microscopy and image analysis.

Subject Content

The structure and function of membranes, organelles and the cell cytoskeleton.

Intracellular compartmentalization of molecules and their transport.

The interrelationship of cells with their immediate environment including adjacent cells, the extra-cellular matrix, and the cytoskeleton.

Cell communication through: Receptors - families, general properties; receptor-ligand binding studies and outcomes, and Signalling molecules - structural variety; functional classification.

Cell division including stem cells, the cell cycle, and its control and cell death.

The development of cells (e.g. haematopoiesis), their identification, morphology and function is investigated in the context of haematological and cell disorders and stem cell therapies.

The detailed microscopic characterization of eukaryotic cells in blood and tissue, including confocal microscopy and fluorescence correlation.

The development of technical and interpretative skills relevant to cell culture methods, cell characterisation through specific stains/probes, using advanced microscopy and image analysis techniques.

BIOS 3003 Advanced Sports Physiology

Credit Points 10

Legacy Code 400888

Coordinator Shona Papalia (https://directory.westernsydney.edu.au/search/name/Shona_Papalia/)

Description In 2017, this unit is replaced by 401146 - Applied Physiology. This unit presents the knowledge and laboratory skills essential to understanding the physiological demands on the sports participant, as well as to develop, implement and evaluate sports-specific training programs. Students will develop the knowledge and skills necessary to perform and interpret results for a number of standard laboratory and field-based physiological tests used in talent identification and the assessment of high performance athletes. Prescription focuses on the development and implementation of sport specific fitness programs. Also covered are the physiology of ergogenic aids, overtraining, muscle fatigue and soreness; physiological factors limiting performance; and physiological responses to exercise in challenging environments.

School Health Sciences

Discipline Human Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2006 AND
HLTH 2004 AND
BIOS 2037

Equivalent Subjects BIOS 3022 - Sports Physiology

Restrictions Students must be enrolled in program 4658 - Bachelor of Health Science (Sport and Exercise Science).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss how a variety of physiological, metabolic, hormonal and neural factors may limit athletic performance;
2. Explain the scientific basis for talent identification, the selection of athlete assessment procedures and the adaptations required for different age groups;
3. Organise, conduct and interpret the results of an array of physiological laboratory and field based techniques used in the assessment of high performance athletes and in talent identification ? including VO₂max; anaerobic threshold, OBLA, anaerobic exercise capacity; plus muscular strength, power and endurance; flexibility (ROM); speed; power; general functional movement and functional skill; and other sport specific tests.
4. Identify the relative importance of the fitness components to performance in a sport and positions within a sport, and describe the effects of different types of sports training (and detraining) on physiological, hormonal, immunological, metabolic and neural responses and adaptations to exercise and on sport specific test results.
5. Demonstrate an ability to: assess athletes fitness; promote, design programmes, implement, supervise, demonstration, monitor and evaluate effective programs for individual athletes and sporting teams (who are children; adolescents, adults and older individuals) for training improvements in: flexibility, aerobic and anaerobic

- power and capacity, lactate tolerance, anaerobic threshold, metabolic efficiency, strength, speed and power.
6. Describe and explain the effects of challenging environments on sports training and performance including: heat, cold, altitude, pollution.
 7. Explain the potential risks and benefits of various physiological ergogenic aids on exercise performance and general health including but not limited to the effects of anabolic steroids, autologous blood transfusion (blood doping), erythropoietin and growth hormone.
 8. Describe the signs, causes and contributing factors related to over training syndrome.
 9. Explain how muscular fatigue, weakness, muscular soreness acute muscle soreness and delayed onset muscle soreness may affect biomechanics of motion and thus quality of training and sports performance.
 10. Critically evaluate current research literature on the mechanisms on muscular fatigue, acute muscle soreness and

Subject Content

Testing of high performance athletes.

1. Factors that limit athletic performance
 - a. Physiological
 - b. Metabolic
 - c. Hormonal
 - d. neural
2. Physiological testing of athletes - Scientific basis for athlete testing and Criteria for selecting tests
 - a. Choosing attributes to be tested and the tests to be used
 - identifying important fitness Attributes for A sport
 - role of Notational and Game analysis
 - ability to discriminate, accuracy, Validity and reliability
 - children Vs adolescents Vs adults Vs older individuals
 - Catering for current Sports performance level
 - b. The AIS laboratory standards assistance scheme and Laboratory accreditation
 - c. General pre-test management and administration
 - consent forms
 - medical/health assessment/Screening
 - explanation of procedures
 - Privacy and Personal Information Protection Act 1998 (PPIPA) and the Health Records and Information Privacy Act 2002 (HRIPA) and how they apply to information collected from a client
 - legal requirements for individuals Working with children in sport and how An individual shows that they comply with those requirements
 - strategies and systems that need to be implemented to ensure The minimisation of health and injury risks associated with training and testing in sport
 - record keeping
 - d. Tests used by sports scientists and their purposes: Characteristics of good measurement, statistics and related terminologies with examples from literature. Fundamental techniques in measurement e.g. controls, accuracy, test selection, recording. Validity, reliability and objectivity using known tests in a laboratory setting. Norms (percentiles and stanines)
 - e. Tests used by sports coaches and trainers
 - f. The tests ? including VO₂max; anaerobic threshold, OBLA, anaerobic exercise capacity; plus muscular strength, power and endurance; flexibility (ROM); speed; power; general functional movement and functional skill; and other sport specific tests
 - g. Assessment procedures for specific sports including calculations and interpretation of resulting data (Running and a team sport)
 - h. Associated Practical
 - equipment calibration

- organise, conduct and interpret The results of An array of physiological laboratory and field based techniques used in The assessment of High performance athletes and in talent identification
3. Talent identification in children, adolescents and young adults
 - a. Discussion of tests for sports: where identification works well; Where it doesnt work well. The Australian eNTID and other programs
 4. Sport specific training
 - a. Effects of different types of sports training (and detraining) on physiological, hormonal, immunological, metabolic and neural responses and adaptations to exercise and on sport specific test results
 - b. Programme design
 - promotion and evaluation, individual athletes and sporting teams (who are children; adolescents, adults and older individuals) for training improvements in: flexibility, aerobic and anaerobic power and capacity, lactate tolerance, anaerobic threshold, m
 - year-round training; periodisation of training (in commonly seen proformas), peaking and tapering, off season training
 - developing fitness for optimum performance in specific Sports
 - associated practical: program design, implement, supervise, demonstration, Monitor and Evaluate
 5. Overtraining
 - a. Causes and contributing factors
 - b. Signs and symptoms
 - c. Effects on
 - athlete performance in training and Competition
 - on fitness and fitness test results
 - d. Prevention
 - e. Treatment
 - f. Retraining after overtraining syndrome
 6. Ergogenic aids
 - a. Definitions of ergogenic aid and doping
 - b. The IOC rules what and why
 - drugs (therapeutic Vs illegal)
 - c. Specific drug categories
 - anabolic steroids
 - blood doping
 - amphetamines
 - erythropoietin
 - growth hormone
 7. Environmental sports physiology implications for sports performance
 - a. Thermoregulation
 - b. Altitude
 - c. Circadian rhythms
 - d. Pollution
 8. Nutrition and Hydration for high performance and elite a

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have:

- 1) submitted a Student Undertaking Form and have applied for a National Police Certificate;
- 2) submitted Working with Children Check Student Declaration;
- 3) possess a current WorkCover Authority approved First Aid Certificate.

BIOS 3004 Analytical Microbiology

Credit Points 10

Legacy Code 300866

Coordinator Oliver Morton ([https://directory.westernsydney.edu.au/search/name/Oliver Morton/](https://directory.westernsydney.edu.au/search/name/Oliver%20Morton/))

Description The unit provides a theoretical and practical introduction to wide range of microbiological techniques that are commonly used in medical science, industrial and food microbiology, environmental science, and research. Building on a basic understanding of microbiology the unit shows how microorganisms can be isolated, identified, and enumerated using traditional microbiological methods, modern variations on traditional methods, and more recent immunological and molecular methods. The laboratory component is an integral component of the unit as the students use a variety of techniques, methods and commercial systems that are applied in microbiological laboratories, and incorporates problem solving and inquiry based exercises.

School Science

Discipline Microbiology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 2022

Equivalent Subjects BIOS 3031 - Analytical Microbiology

Assumed Knowledge

A good general knowledge of microbiology and having the technical skills needed to work safely with microorganisms.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the microbiological methods used to observe, enumerate, isolate, characterise, differentiate, tag and identify microbial populations.
2. Discuss the importance of rapid methods in medical microbiology with reference to factors such as cost, speed of diagnosis, accuracy, skill levels and accreditation.
3. Describe methods for characterising microbial populations in various environments.
4. Perform a variety of analytical techniques, complying with Occupational Health and Safety guidelines, to identify, characterise and enumerate microorganisms in environmental samples and foods.
5. Apply different analytical methods given the context, situations and/or scenarios.
6. Work cooperatively and constructively in groups to solve problems using the scientific method.
7. Read and interpret scientific articles in the field of analytical microbiology.
8. Create a valid hypothesis, and design and undertake an experimental protocol to test this hypothesis derived from a scientific question.

Subject Content

1. The importance of microscopy, particularly fluorescent microscopy in analytical microbiology.
2. Physical and nutritional methods of selective enrichment of target microorganisms and the use of selective and differential media with emphasis on chromogenic media.
3. Chemical and physical methods to characterise and enumerate microorganisms.

4. The importance of biochemical analyses and computer aided identification systems to identify microorganisms.
5. Methods to determine antibiotic resistance in microorganisms.
6. The different methods of microbial identification based on immunological techniques such as ELISA, immunochromatography and immunofluorescence.
7. The application of molecular methods such as PCR, hybridisation, and NASBA, to detect, differentiate, monitor and target microorganisms quantitatively.
8. Chemical methods such as phospholipid fatty acid analysis and molecular methods such as Terminal RFLP to identify and characterise microbial populations.
9. Application of analytical microbiology in food, medical and environmental studies.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BIOS 3005 Applied Biomechanics

Credit Points 10

Legacy Code 401147

Coordinator Peter Clothier ([https://directory.westernsydney.edu.au/search/name/Peter Clothier/](https://directory.westernsydney.edu.au/search/name/Peter%20Clothier/))

Description To fully understand the science underlying the optimisation of human movement, students require a comprehensive working knowledge of Biomechanics. This unit represents a theoretical and applied study of selected topics in Biomechanics. It builds on the basic principles of Biomechanics that are presented in the unit Biomechanics and applies this knowledge to the analysis of sporting and human exercise performance. To achieve this, advanced methods and concepts in the biomechanical analysis of human performance are identified and explored.

School Health Sciences

Discipline Biological Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2003

Equivalent Subjects BIOS 3006 - Applied Biomechanics of Exercise
BIOS 3007 - Applied Biomechanics of Sport and Exercise

Restrictions Students must be enrolled in 4658 - Bachelor of Health Science (Sport and Exercise Science).

Assumed Knowledge

It is expected that students have the knowledge and skills associated with the prerequisite subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and apply biomechanical principles to assess movement in the context of health, exercise, sport and/or activities of daily living in a variety of populations.
2. Articulate and synthesise factors governing efficient movement from a biomechanical perspective.
3. Utilise biomechanical measurement techniques to assess human movement, human interactions with equipment and the environment, and devise intervention strategies where appropriate.
4. Collect, process and present data common to biomechanical analyses using biomechanical equipment and software applications.
5. Identify and explain biomechanical factors associated with injury and injury prevention.
6. Describe and apply techniques to analyse gait using basic temporal, kinematic and kinetic measurement procedures.
7. Illustrate and explain muscle mechanics concepts that affect muscle performance.

Subject Content

- Qualitative analysis techniques: mechanical analysis of movement and methods of observation for The assessment of performance / technique
- Dynamometry: principles and applications of Force measurement in biomechanics
- Motion analysis: principles and applications in The use of video/ Motion analysis in biomechanics
- muscle mechanics: theory, assessment and application of muscle mechanics principles in sport and Exercise
- gait analysis: theory and application of gait analysis techniques in biomechanics
- The application of Biomechanical principles to selected Sports and Exercise movements
- Ergonomics: theoretical and practical applications of The Biomechanical analysis of workstations
- Electromyography: The collection and use of EMG data in biomechanics

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Final Exam	2 hours	50	N	Individual
Poster Presentation	AO sized conference poster	30	N	Group

BIOS 3007 Applied Biomechanics of Sport and Exercise

Credit Points 10

Legacy Code 400889

Coordinator Peter Clothier ([https://directory.westernsydney.edu.au/search/name/Peter Clothier/](https://directory.westernsydney.edu.au/search/name/Peter%20Clothier/))

Description To fully understand the science underlying the optimisation of human movement, students require a comprehensive working knowledge of Biomechanics. This unit represents a theoretical and applied study of selected topics in Biomechanics. It builds on the basic principles of Biomechanics that are presented in the unit Introduction to Biomechanics and applies this knowledge to the analysis of sporting and human exercise performance. To achieve this, advanced methods and concepts in the biomechanical analysis of human performance are identified and explored.

School Health Sciences

Discipline Biological Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2008

Equivalent Subjects BIOS 3006 - Applied Biomechanics of Exercise

Restrictions Students must be enrolled in program 4658 - Bachelor of Health Science (Sport and Exercise Science).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and apply biomechanical principles to assess movement in the context of health, exercise, sport and/or activities of daily living in a variety of populations.
2. Articulate and synthesise factors governing efficient movement from a biomechanical perspective.
3. Utilise biomechanical measurement techniques to assess human movement, human interactions with equipment and the environment, and devise intervention strategies where appropriate.

4. Collect, process and present data common to biomechanical analyses using biomechanical equipment and software applications.
5. Identify and explain biomechanical factors associated with injury and injury prevention.
6. Describe and apply techniques to analyse gait using basic temporal, kinematic and kinetic measurement procedures.
7. Illustrate and explain muscle mechanics concepts that affect muscle performance.

Subject Content

1. Qualitative analysis techniques: Mechanical analysis of movement and methods of observation for the assessment of performance / technique.
2. Dynamometry: Principles and applications of force measurement in biomechanics
3. Motion Analysis: Principles and applications in the use of video/ motion analysis in biomechanics.
4. Muscle mechanics: Theory, assessment and application of muscle mechanics principles in sport and exercise.
5. Gait analysis: Theory and application of gait analysis techniques in biomechanics.
6. The application of biomechanical principles to selected sports and exercise movements.
7. Ergonomics: Theoretical and practical applications of the Biomechanical analysis of workstations.
8. Electromyography: the collection and use of EMG data in biomechanics.

Teaching Periods

BIOS 3012 Conservation Biology

Credit Points 10

Legacy Code 300855

Coordinator Adrian Renshaw ([https://directory.westernsydney.edu.au/search/name/Adrian Renshaw/](https://directory.westernsydney.edu.au/search/name/Adrian%20Renshaw/))

Description Most species disappearances have occurred in major extinction events spread over geological time. Are we in the midst of and the cause of another mass extinction event? This unit will explore this idea by examining the processes that have led to, and are leading to species extinction and the current biodiversity crisis. Many of the methods and issues used in and associated with conservation will be covered in a variety of case studies, field and laboratory activities.

BIOS 3013 Ecosystem Carbon Accounting

Credit Points 10

Legacy Code 300856

Coordinator Matthias Boer ([https://directory.westernsydney.edu.au/search/name/Matthias Boer/](https://directory.westernsydney.edu.au/search/name/Matthias%20Boer/))

Description A critical part of society's response to climate change is to measure the movement of greenhouse gases. Once this is done, steps taken to reduce these gases can be correctly targeted and the impact of such steps monitored. This unit will introduce students to the scientific measurement of greenhouse gas uptake and emissions, including assessment of uncertainties and verifiability of measurement. Ecosystem-level models will be used to estimate and quantify movement of greenhouse gases, allowing quantification of the net greenhouse gas emissions over the life cycle of a product. These approaches are vital steps in moving our society to a sustainable future.

School Science

Discipline Ecology and Evolution

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) EART 2001

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the key components of the global carbon cycle, particular natural and anthropogenic CO₂ emissions, CO₂ uptake and release of managed and natural ecosystems, storage of carbon in the oceans and on land.
2. Describe and critique the measurement techniques available for measurements of carbon stocks in managed and natural ecosystems.
3. Describe sources of measurement error, spatial and temporal variability, and report uncertainty of estimates using confidence intervals.
4. Apply appropriate techniques to quantify carbon stocks of managed and natural ecosystems, with critical evaluation of the limitations of the methods.
5. Use the full carbon accounting model (FullCAM) to estimate pools and fluxes of carbon in forest ecosystems, and evaluate effects of alternative management strategies and environmental variation.
6. Describe and quantify the carbon storage in forestry products over their expected lifetime.
7. Communicate results of enquiry using a range of formats and media.

Subject Content

Components of the global carbon cycle: pools and fluxes
Ecosystem carbon balance: processes and measurement
Measurement of carbon storage: field methods, measurement error and sampling variability
Quantifying carbon storage: carbon sequestration in vegetation and soils

Ecosystem-level models for greenhouse gas accounting (Full Carbon Accounting Model, FullCAM)
Trade-offs between carbon sequestration and the water cycle: plantation water use, groundwater and salinity
Understanding carbon footprint, and the impact of substituting wood products for fossil fuels
Carbon accounting in an international context : important international treaties and initiatives (Kyoto, carbon trading, REDD), and the varying role of forestry plantations
Comparing greenhouse gas emissions with offsets created by forest plantations

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Scientific Report: Carbon sequestration of trees	1,500 words	20	N	Individual
Scientific Report: Carbon emission and sequestration	1,500 words	20	N	Individual
Life cycle analysis: Slide presentation (10%, group mark); Talk (10%, individual mark)	Slides: 20 - 30 slides; Talk: 5 - 8 mins	20	N	Individual
Final examination: Short answer and essay questions	2 hours	40	N	Individual

Teaching Periods

BIOS 3014 Genes, Genomics and Human Health

Credit Points 10

Pre-requisite(s) BIOS 2018 OR BIOS 2026 OR

BIOS 2014 OR
BIOS 2021

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the structure of the human genome and common genetic variants in the genome
2. Explain the mechanisms by which the integrity of the human genome is maintained and relate errors in these pathways to human health
3. Compare and contrast the genetic basis of rare single-gene Mendelian disorders with common complex multi-gene disorders
4. Describe methods of genetic analysis as applied to single gene and multi-gene disorders
5. Evaluate the role of genetics in exploring the relationship between lifestyle, the environment, and common human diseases
6. Gather information, plan, complete and analyse experiments in molecular genetics

Subject Content

1. Genomes and genetic variation: comparative analysis genomes; the human genome project; defining genetic variation; examining how genetic variation can identify individuals and populations
2. The origins of genetic variants in the human genome: mechanisms that maintain the integrity of the human genome; errors in DNA repair that are associated with disease
3. Epigenetics and health: X-inactivation and imprinting
4. Rare and common genetic variants: Mendelian and non-mendelian inheritance of disease; exploring the relationship between genotype and phenotype
5. Genetic analysis: single-gene and whole-genome approaches; designing a study to search for a genetic basis of disease
6. Genetic basis of common diseases: asthma; obesity; dementia; the effect of lifestyle and the environment
7. Cancer: heritable and non-heritable cancer; breast cancer and melanoma
8. Pharmacogenomics: correlating drug response to individual genotype; prediction of therapeutic response based upon individual genotype
9. Human ethics

Assessment

BIOS 3017 Invertebrate Biology

Credit Points 10

Legacy Code 300918

Coordinator Uffe Nielsen ([https://directory.westernsydney.edu.au/search/name/Uffe Nielsen/](https://directory.westernsydney.edu.au/search/name/Uffe%20Nielsen/))

Description Invertebrates are the most diverse and abundant organisms in aquatic and terrestrial environments. Due to their key role in many ecosystems, biologist E. O. Wilson coined the phrase of invertebrates as the 'little things that run the world'. Besides their ecological importance, many invertebrates are useful to humans, whereas others are harmful to agriculture, human and veterinary health. This unit highlights invertebrate diversity and life histories as well as their key ecological and economic importance. It also includes hands-on laboratory and field studies. This unit is designed for students with career pathways in science (e.g. animal, environmental, forensic and medical sciences) as well as agriculture, environmental management and education.

School Science

Discipline Biological Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects BIOS 3018 - Invertebrate Biology NATS 3026 - Forensic Biology

Restrictions Students must have completed 120 credit points, with at least 40 credit points at level 2.

Assumed Knowledge

A basic understanding of core concepts of biology and/or zoology is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe invertebrate biodiversity
2. Compare and contrast invertebrate morphology, anatomy, physiology, development, reproduction and behaviour
3. Apply acquired knowledge to identify and classify invertebrates
4. Apply concepts of diversity and abundance through sampling and surveying invertebrate biodiversity in the field

5. Create an invertebrate collection through catching, identifying, classifying, preserving and presenting specimens
6. Design and conduct experiments to study the biology of insects and write these up as a formal report
7. Identify and evaluate the roles and interactions of invertebrates in the environment
8. Evaluate morphological, ecological and evolutionary relationships of invertebrates

Subject Content

1. Introduction to Invertebrate Diversity
2. Reproduction and Lifecycles of Invertebrates
3. Diversity, Classification, Morphology and Anatomy of: Insects, Crustaceans, Molluscs, Annelids
4. Collection and Identification of terrestrial and aquatic Invertebrates
5. Insect Behaviour
6. Insect-plant Interactions and climate change
7. Applied entomology
8. Insects and parasitoids
9. Bees and other pollinators

Assessment

Teaching Periods

BIOS 3019 Marine and Aquatic Ecology

Credit Points 10

Legacy Code 300978

Coordinator Sebastian Holmes ([https://directory.westernsydney.edu.au/search/name/Sebastian Holmes/](https://directory.westernsydney.edu.au/search/name/Sebastian%20Holmes/))

Description Temperate freshwater, estuarine and marine aquatic ecosystems play vital roles in providing food, water, recreation and other ecosystem services to human society and habitats for important species that make up global biodiversity. Yet aquatic habitats are the most threatened ecosystems on earth, under threat from global climate change and urbanisation. Through inquiry and problem solving this unit will equip students with the necessary techniques in experimental design and analysis needed to investigate aquatic ecosystems and knowledge of the main animal and plants in aquatic and marine ecosystems. The logic and philosophy of science, scientific studies and experimental analyses will be used to understand temperate aquatic ecosystems throughout this unit. On completion students will have the background knowledge and skills communicate to a range

of audiences, so that they can contribute beneficially to management and/or conservation of waterways and oceans and the biodiversity within.

School Science

Discipline Marine Science

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects BIOS 3009 - Aquatic Ecology BIOS 3010 - Aquatic Ecology

Restrictions Successful completion of 80 credit points at Level 1 and 40 credit points at Level 2.

Assumed Knowledge

Concepts of classification, evolution, taxonomy, cellular processes plant and animal structure and function, normal distribution, representative sampling, probability and uncertainty.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the main characteristics of aquatic habitats including estuarine, freshwater and marine and use taxonomic keys and other methods to identify organisms where appropriate to species level in freshwater, estuarine and marine habitats.
2. Describe, use and evaluate methods of experimental design and analysis of statistical data in studies in freshwater, estuarine and marine aquatic habitats.
3. Describe the main models which explain factors affecting macrofaunal and floral assemblages in estuarine and marine aquatic habitats.
4. Use and critically evaluate scientific studies to support or reject hypotheses developed and tested within freshwater, estuarine and marine aquatic habitats.
5. Construct experimental designs developed to assess human impacts on aquatic systems and explain these using a philosophical and historical basis of thinking.
6. Demonstrate scientific thinking and communication through the preparation of scientific reports which describe student investigations of aquatic habitats. This involves planning and implementing of experimental designs, selection of appropriate tools to collect representative samples, analyse data and synthesis ideas from the literature to support the main conclusions reached in the investigation.
7. Demonstrate and discuss your appreciation that 70% of our world is covered by aquatic environments and that humans have a responsibility to conserve the biodiversity within for future generations.

Subject Content

1. Characteristics of aquatic habitats ? physical, chemical and biological factors affecting distribution of organisms in estuarine, marine and freshwater aquatic habitats
2. Biotic and abiotic interactions in populations ? competition, predation, herbivory, beneficial associations
3. Experimental tests and analysis of abiotic and biotic interactions
4. Theoretical underpinnings of processes structuring estuarine and marine habitats including larval supply, settlement, post settlement mortality and recruitment into adult populations
5. Natural disturbance and regeneration in benthic communities

6. Connectivity between habitats and the unknown process of larval supply in an open system
7. Pressures facing biodiversity of estuarine and marine habitats including ocean acidification

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Legacy Code 300921

Coordinator Jonathan Plett ([https://directory.westernsydney.edu.au/search/name/Jonathan Plett/](https://directory.westernsydney.edu.au/search/name/Jonathan%20Plett/))

Description This unit explores needs of world food production systems for improved plant health and biosecurity, from paddock to plate and environmental consequences of management practices. Through their studies, students will learn to recognise the significance of plant pests (invertebrates, microorganisms and weeds) and their impact on human society and food security, and methods of reducing their damage to plants and plant products. Major areas of study include: recognition of pests and diseases and assessment of field damage; strategies for reducing pest damage (including legislative, physical, biological, genetic and chemical control methods) and their benefits and limitations; the theory and practice of integrated pest and disease management systems; and issues associated with quarantine and biosecurity.

BIOS 3023 Vertebrate Biodiversity

Credit Points 10

Legacy Code 300861

Coordinator Christopher Turbill ([https://directory.westernsydney.edu.au/search/name/Christopher Turbill/](https://directory.westernsydney.edu.au/search/name/Christopher%20Turbill/))

Description This unit examines the functional ecology and diversity of vertebrate animals (fish, amphibians, reptiles, birds and mammals). It takes an integrative approach, combining anatomy, physiology, ecology and behaviour, to explain how vertebrates survive and reproduce in relation to their environment. We will uncover the evolutionary relationships among vertebrate groups, and examine their adaptations to different environmental challenges. The unit also explores patterns in vertebrate diversity, with a focus on Australian ecosystems. Students will apply their knowledge of the scientific method to design and conduct their own research project to investigate how environmental factors influence vertebrate animal abundance and diversity.

School Science

Discipline Ecology and Evolution

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 1001

Equivalent Subjects LGYA 5856 - Animal Form Function BIOS 3024 - Vertebrate Biodiversity

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the morphological and physiological characteristics that define vertebrate animals
2. Understand the processes and explain patterns in the phylogenetic (evolutionary) history and current diversity of vertebrate animals
3. Compare and contrast the structure and function of major body systems in vertebrate animals to understand their evolution in response to different environmental challenges
4. Critically interpret the ecological function of variation in morphological, physiological and behavioural traits among vertebrate animals in relation to their environment, especially from an Australian perspective
5. Review broad patterns in the diversity of vertebrate animal species and evaluate how human-induced environmental changes threaten the viability of their populations
6. Apply the scientific method and work collaboratively to design, conduct and analyse a research project addressing the environmental factors that determine the diversity and abundance of vertebrate animal species

Subject Content

1. Structure and function of major vertebrate animal groups
2. Evolutionary relationships among vertebrate animal groups
3. Diversity of vertebrates, around the world and in Australia
4. Functional ecology of vertebrates in Australian ecosystems
5. Application of scientific method to study vertebrates in relation to their environment

Legacy Code 301253

Coordinator John Hunt ([https://directory.westernsydney.edu.au/search/name/John Hunt/](https://directory.westernsydney.edu.au/search/name/John%20Hunt/))

Description This unit will ensure students are able to understand the core concepts in modern evolutionary theory and the central position that evolution plays in unifying all sub-disciplines of biology. It will also

enable students to distinguish the major genetic mechanisms that underpin these theories and critically assess the general importance of genetics in the evolutionary process. In particular, students will gain an in depth knowledge on speciation and population divergence, origin of genetic variation, genetic drift and founder effects, natural and sexual selection, migration, mutation and coevolution, with a major emphasis on genetic mechanisms and the analytical techniques used to assess them. Students may be required to travel to a different campus to undertake this unit.

School Science

Discipline Genetics

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 1012 AND BIOS 1001

Incompatible Subjects BIOS 2034 Principles of Evolution

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define evolution and provide supporting evidence for this process;
2. Evaluate the concepts of natural and sexual selection and how they contribute to biological adaptation and speciation;
3. Assess the relative importance of neutral and selective processes to evolutionary change;
4. Critically assess the importance of genes to the evolutionary process and be able to differentiate between the different evolutionary mechanisms;
5. Combine information on genes and selection to predict the direction and strength of phenotypic evolution;
6. Describe the ways in which gene interactions can alter the evolution and coevolution of phenotypic traits;
7. Critically assess and interpret scientific literature, and advances in the field of evolutionary research;
8. Design, execute, analyse and interpret scientific experiments on genetics and evolution;
9. Communicate the findings of investigations and experiments in oral and written form;
10. Analyse the application of evolutionary theory to many modern scientific issues, including (but not limited to) human disease, agricultural breeding, and genetic engineering.

Subject Content

- An Overview of evolution and The scope of evolutionary biology
- The role of genes in The evolutionary process
- Mendelian Genetics and The inheritance of genes of major effect
- population Genetics and The processes that can alter allele Frequencies in The population
- Assessing allele Frequencies in natural populations and testing for deviation from Hardy-Weinberg Equilibrium
- quantitative Genetics and The evolution of phenotypic traits
- using laboratory breeding designs and molecular techniques in natural populations to estimate key quantitative Genetic parameters, including heritability and Genetic Correlation
- Quantifying The strength and form of selection in laboratory and natural populations
- predicting The rate and direction of phenotypic evolution
- using current molecular approaches (including QTL, hitchhiking Mapping, GWAS, RNAseq) to understand The genomic basis of complex traits

-understand Core phylogenetic principles and how this informs macroevolution
 -An overview of the key macroevolutionary processes (e.g. speciation, co-evolution, symbiosis and extinction)

BIOS 3027 Molecular Biology of the Cell

Credit Points 10

Legacy Code 301251

Coordinator Liza Cubeddu ([https://directory.westernsydney.edu.au/search/name/Liza Cubeddu/](https://directory.westernsydney.edu.au/search/name/Liza%20Cubeddu/))

Description Molecular biology is central to many fields of the biomedical and natural sciences, and includes genetics, immunology, cell biology, biochemistry, and forensics. Through comparative studies of different organisms, this Unit will explain fundamental concepts and methods in the study of DNA and RNA, extending to the application of molecular biology in more advanced fields such as genomics. Subjects will include DNA replication; transcriptional, post-transcriptional and epigenetic regulation of gene expression; microarrays, and an introduction to bioinformatics. Practical work will provide opportunities to become familiar with the methods of molecular biology, with an emphasis on the development of problem solving and analytical skills. Students may be required to travel to a different campus to undertake this unit.

School Science

Discipline Biochemistry and Cell Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 2014 OR

BIOS 2018

Incompatible Subjects BIOS 3015 Human Molecular Biology

BIOS 2026 Molecular Biology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recall common terms and definitions of molecular biology
2. Explain how genomes are organised and how this relates to the control of gene expression.
3. Describe mechanisms of transcriptional and post-transcriptional gene regulation
4. Compare and contrast common approaches to analyse DNA and RNA at the level of a single gene and of a whole genome.
5. Plan, complete and become proficient in conducting experiments in molecular biology.
6. Communicate and problem solve experiments as part of a laboratory group.
7. Demonstrate skills in critical thinking and analysis.

Subject Content

Theme 1: Working with DNA and RNA

-The structure and organisation of DNA and RNA: relating form to function

-What is a gene? Locating genes within a genome and in different organisms

-The organisation of genome

-The theory and practice of cloning

Theme 2: Synthesis of DNA, RNA and Protein

-DNA Synthesis (Replication) and DNA replication- Termination of replication and role of telomerase

-RNA Synthesis (Transcription)

-RNA processing

-The genetic code

-Protein synthesis (Translation)

Theme 3: Controlling the genome ? DNA repair and the regulation of transcription

-The regulation of gene expression: Nucleosome modification and Chromatin remodelling

-Types of mutations

-DNA repair pathways

-Homologous recombination and its importance in DNA repair and meiosis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Online multiple choice quiz (online problem solving)	1 hour	15	N	Individual
Laboratory Practical Component and Critical Analysis	1,500 words	45	N	Individual
Final Exam Written, with multiple choice	2 hour	40	N	Individual

BIOS 3028 Pathological Basis of Human Disease

Credit Points 10

Legacy Code 301260

Coordinator Garry Niedermayer ([https://directory.westernsydney.edu.au/search/name/Garry Niedermayer/](https://directory.westernsydney.edu.au/search/name/Garry%20Niedermayer/))

Description Pathology is the study of disease. Students will gain an understanding of human pathogenesis, general and systems pathological processes, and the scientific basis of diagnostic and treatment options. The unit builds upon the students' fundamental knowledge of physiological processes and knowledge of normal human tissue and organ histology, and examines histopathological changes evident in disease states. Students may be required to travel to another campus to undertake this unit.

BIOS 3029 Biotic interactions

Credit Points 10

Legacy Code 301266

Coordinator Ben Moore ([https://directory.westernsydney.edu.au/search/name/Ben Moore/](https://directory.westernsydney.edu.au/search/name/Ben%20Moore/))

Description This unit will introduce the diversity of biotic interactions observed in nature, with an emphasis on their significant roles in maintaining ecosystem function and regulating biological diversity. Major themes will include the role of microbes in plant and animal health and nutrient acquisition via the soil and gastrointestinal microbiomes, the chemical ecology of interactions between plants, and herbivores and pollinators, and interactions between predators and prey. The consequences of biotic interactions for participants can vary from mutual benefit to benefit for one participant and harm for the other, however these outcomes can often change through time and space. Students will be guided to an understanding of how ecological circumstances determine the consequences of biotic interactions.

Coordinator Oula Ghannoum ([https://directory.westernsydney.edu.au/search/name/Oula Ghannoum/](https://directory.westernsydney.edu.au/search/name/Oula%20Ghannoum/))

Description Plants are the primary producers of terrestrial ecosystems and moderators of climate change. This unit introduces students to how plants grow and interact with their environment. Students will learn how leaves turn sunlight energy into sugars; stems transport water, solutes and organic compounds; roots acquire water and mineral nutrients by themselves or in association with soil microbes; and hormones regulate plant development and responses to the environment. This knowledge set is crucial for managing our Century's key challenges of food security and climate change. Students will be required to travel to the Hawkesbury campus where the practicals take place.

BIOS 3033 Applied Bioinformatics

Credit Points 10

Legacy Code 301406

Coordinator Mark Temple ([https://directory.westernsydney.edu.au/search/name/Mark Temple/](https://directory.westernsydney.edu.au/search/name/Mark%20Temple/))

Description The ability to perform computational experiments and analyse data is a key component for a successful career in the biological sciences. This unit focuses on how biology has been enhanced through advances in technology, genomics, transcriptomics, proteomics and metabolomics in the development of cell phenotype. Using model systems, this unit shows how research biologists use computational cell biology to form hypotheses, mine data, analyse experiments, and synthesise information. Students will apply bioinformatics and engage with next-generation DNA sequencing data. Students will apply web-based bioinformatics toolkits to construct and compare model genomes, transcriptome, proteome and metabolome information to profile cell genotype and phenotype. Students will undertake a project that interprets and communicates research findings in the context of real world applications, legal and ethical frameworks.

School Science

Discipline Biological Sciences

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 2018

Assumed Knowledge

A basic understanding of microbial, animal and plant cell core concepts is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Utilise genomics, transcriptomics, proteomics and metabolomics in profiling cell processes and phenotype.
2. Explain how technological advances enable connectivity of omic databases and advances in computational cell modelling.
3. Compare and contrast omic features of plant, animal and microbial cells.
4. Describe and annotate genomes, model transcriptomic responses in the context of cellular processes.
5. Develop cellular models through extracting information, managing and organising data
6. Establish the role of in-silico studies underpinning genetic engineering and biotechnology and its application industry and the research sectors.
7. Communicate the findings of investigations within existing legal and ethical frameworks

Subject Content

1. Profiling genomic, transcriptomic, proteomic and metabolomics data in the process of establishing workflow to develop model cell systems.
2. Technologies that enable sequencing of macromolecules, processes and computational resources.
3. Features of genomes, transcriptomes, proteomes and metabolomes, their linkage in the context of computational modelling.
4. Application of bioinformatic tools within an online environment and visual interfaces to acquire, judge, and synthesise biological information.
5. Interrogation of functional pathways and demonstration of in-silico genetic engineering approaches.
6. Professional presentation skills for industry, government, and academia.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task

BIOS 3034 Molecular Biotechnology

Credit Points 10

Legacy Code 301405

Coordinator Mark Jones ([https://directory.westernsydney.edu.au/search/name/Mark Jones/](https://directory.westernsydney.edu.au/search/name/Mark%20Jones/))

Description Molecular techniques in cell biology are rapidly developing and offer new solutions to disease mitigation, as well as sustainable solutions to environmental and industrial imperatives. The fundamental cellular processes along with stem cell development, transformation, transfection, cell engineering and re-programming are some of the advanced applications covered in this unit. Students will conduct guided projects investigating the action of hormones, growth factors, morphogens and bio-actives; their receptors and signalling pathways and the cellular responses they trigger. Molecular Biotechnology covers modern techniques in cell screening, cell culture, advanced characterization and experimental approaches enabling dynamic understanding of live microbial, animal and plant cells.

School Science

Discipline Biochemistry and Cell Biology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 2018 OR
BIOS 3027 AND

Equivalent Subjects BIOS 3001 - Advanced Cell Biology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse and statistically evaluate biological data from a range sources.
2. Evaluate biological mechanisms by articulating the principle intracellular components controlling microbial, animal and plant cell form and function.
3. Analyse the molecular mechanisms and rate by which cells can be induced to respond to variable stimuli.
4. Apply technical and interpretive skills to modify microbial, plant and animal cell for biotechnology applications.
5. Ethically design and evaluate computational experiments in animal, plant or microbial biology.
6. Propose sustainable molecular biotechnology strategies following cultural, ethical and legal frameworks.

Subject Content

1. Molecular mechanisms controlling microbial, animal and plant cell components, including membranes, organelles, cytoskeleton and the intracellular compartmentalization of molecules and their transport.
2. The interrelationship and responsiveness of cells with their immediate environment including molecular modifications to respond to variable stimuli and rapid change.
3. Cell communication through: receptor-ligand binding and bio-active molecule interactions, molecular modifications and reporter systems of cell signalling molecules and bio-remediation.
4. Cell division and differentiation, adaptation and modification through molecular re-programming, induction of pluripotent stem cells, regulation of cell cycle as well as cell death.
5. Application of advanced cell biology techniques, including skills relevant to microbial, animal and plant cell culture methods.
6. Cell characterisation with techniques including real-time Polymerase Chain Reaction (PCR), hyperspectral and fluorescence characterization and image analysis techniques.
7. Development of professional molecular strategies to modify cells for sustainable environmental and industrial applications and disease control, in the context of cultural, ethical and legal frameworks.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Critical Review	1,500 words	30	N	Individual

BIOS 3035 Sustainable Environments

Credit Points 10

Legacy Code 301409

Coordinator Jeff Powell ([https://directory.westernsydney.edu.au/search/name/Jeff Powell/](https://directory.westernsydney.edu.au/search/name/Jeff%20Powell/))

Description As a student in Sustainable Environments you will synthesize and apply your knowledge about how ecological systems are responding to human impacts in the Anthropocene and how adaptation and mitigation can moderate these impacts. You will demonstrate knowledge of the role of biological and physical processes in provision of ecosystem services. You will apply analytical skills to

identify sustainable solutions in social-ecological systems. You will incorporate social and cultural contexts, including relevant Aboriginal perspectives, in communicating science-based knowledge related to the United Nations sustainable development goals in an independent, problem-based sustainability project.

School Science

Discipline Ecology and Evolution

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BIOS 2008

Restrictions Students must successfully complete 40 credit points at Level 2

Assumed Knowledge

Students will be expected to apply previous knowledge in ecology and environmental assessment.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain how social, biological and physical processes interact to maintain sustainable ecological systems.
2. Apply frameworks of sustainability and ecosystem services to an ecological system.
3. Identify risks and opportunities for sustainability in an ecological system.
4. Using evidence, effectively communicate the social and ecological contexts of an environmental problem and sustainable solutions.

Subject Content

Sustainability in a changing world

- sustainability frameworks
- Ecosystem services and valuation

Guided case studies (anchored in the United Nations Sustainable Development Goals)

- climate action
- Clean water
- sustainable cities and communities
- life on land

Sustainability project design and application

- modelling and analysis
- team-based sustainability Project

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task

BIOS 3036 Agricultural Biosecurity

Credit Points 10

Legacy Code 301450

Coordinator Jonathan Plett ([https://directory.westernsydney.edu.au/search/name/Jonathan Plett/](https://directory.westernsydney.edu.au/search/name/Jonathan%20Plett/))

Description Students will be exposed to current and emerging biosecurity issues world food production systems are expected to comply with and develop to ensure sustainable and safe animal and plant products. This unit will enable you to recognise, monitor and control animal and plant pests (invertebrates, microorganisms and weeds) and their impact on human society and food security. Major areas of study include strategies and procedures to identify, record and assess damage to animal and plant products. Included in this unit are key issues related to legislative, physical, biological, genetic and chemical control methods, along their benefits and limitations. Theory and practice of integrated pest and disease management systems and issues associated with quarantine and biosecurity are contextually embedded in unit content and activity.

School Science

Equivalent Subjects LGYA 6250 Plant Microbiology and Protection BIOS 3021 Plant Health and Biodiversity

Incompatible Subjects LGYA 5948 Plant Microbiology Interactions LGYA 6200 Plant Protection

Restrictions Successful completion of 100 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the biology of, and symptoms and losses caused by, the major groups of invertebrate pests, animal and plant pathogens as well as weeds.
2. Explain interactions between pests, diseases, their hosts and the environment.
3. Critically analyse strategies for protecting animals and plants from pest and disease damage, their benefits and limitations.
4. Propose practical methods for control of plant invertebrate pests, pathogens and weeds.
5. Identify the systems and implications for quarantine, plant biosecurity and trade.

- Integrate a range of strategies in developing integrated pest and disease management programs, and biosecurity.

Subject Content

- Processes and procedures to identify symptomatology of animal and plant pathogens
- Physical and mechanical control of vertebrate and invertebrate pests, pathogens and weeds
- Sustainable management strategies of animal and plant pests and diseases.
- Animal and plant breeding methodologies for resistance to pathogens and pests.
- Chemical control and legislative requirements for invertebrate pests and pathogens.
- Quarantine and biosecurity for sustainable food security and ecosystems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BIOS 4001 Science, Technology and Environment Honours Project

Credit Points 30

Legacy Code 300412

Coordinator Janice Aldrich-Wright ([https://directory.westernsydney.edu.au/search/name/Janice Aldrich-Wright/](https://directory.westernsydney.edu.au/search/name/Janice%20Aldrich-Wright/))

Description This is a 60 credit point year-long subject taken over two terms (30 credit points in each term). The aim of this subject is to further develop the student's research and problem solving skills. The student is required to implement a research plan, complete a substantive piece of research in a relevant field within Science,

Technology and the Environment and to communicate the results of that work to an interested and technically literate audience. Students will present their research as a thesis with a substantial chapter detailing research objectives, methodology and research outcomes. The thesis topic and structure will vary according to the area of interest of the student and the expertise of the supervisor. The project is meant to be a significant undertaking and to incorporate some element of innovation. Throughout this subject regular planned consultations between the student and supervisor(s) will occur and students will be required to attend seminar series or regular research meetings; these may be formal components of other subjects within the Bachelor (Honours) program. Students are expected to work to a schedule devised in consultation with their supervisor. The schedule will include dates set for progress reports and the presentation of draft chapters for review by the supervisor. The subject builds upon the skills developed in the undergraduate program, extending students' competencies in a range of practical techniques and processes of critical thinking. Students who successfully complete the Honours program will have achieved the appropriate background to enable them to pursue further postgraduate research and/or coursework in the sciences or pursue a career in industry or profession.

School Science

Discipline Biological Sciences

Student Contribution Band HECS Band 2 30cp

Level Undergraduate Level 4 subject

Restrictions Students must be enrolled in a postgraduate or honours program.

Assumed Knowledge

Successful completion of a Bachelors degree in a science discipline. Normally the student will have achieved a grade point average of greater than 5.0 in Level 2 and 3 subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

- conduct a postgraduate research project;
- demonstrate a capacity for critical and independent thought, self-motivation and initiative;
- collate and critically evaluate relevant research literature;
- formulate research questions;
- prepare a formal research proposal on their project;
- (where appropriate) obtain Ethics Approval for the project from the Western Sydney University Human Ethics Review Committee or Animal Care and Ethics Committee;
- demonstrate competencies in appropriate research methodologies;
- devise and implement experimental protocols relevant to their research objectives;
- gather, analyse and evaluate experimental or other relevant data;
- demonstrate oral and written skills appropriate for the presentation of experimental results, including the ability to write a cogent thesis;
- develop a framework for understanding and implementing good laboratory management strategies and occupational health and safety procedures.

Subject Content

The content is flexible, depending on the nature of the research project, and a plan is developed contractually between the student and supervisor(s) to meet the needs of the particular research topic.

This may include the preparation of up to three progress reports, as agreed with the supervisor(s).

In addition to the submission of a thesis, students are also required to complete the following compulsory elements of the Honours program:

- prepare a formal research proposal on the Honours project within the first Session of Honours study, for evaluation by the student's supervisor(s). Note: This requirement may be satisfied separately in the units Research Methodology and Experimental D
- where appropriate, obtain ethics Approval for The Honours Project from The Western Sydney university human ethics Review Committee or Animal care and ethics Committee.

BIOS 7001 Emerging Technologies for Biological Science

Credit Points 10

Legacy Code 800186

Coordinator Chris Cazzonelli ([https://directory.westernsydney.edu.au/search/name/Chris Cazzonelli/](https://directory.westernsydney.edu.au/search/name/Chris%20Cazzonelli/))

Description This unit serves to enhance the technological education and training for students undertaking research in biological, agricultural and medical sciences. The unit will teach current and emerging technologies utilised in biological investigations with a focus on model species of animals, plants, insects and microorganisms. The unit is structured around emerging technologies in research fields of: 1) whole organism physiology, 2) cell molecular biology and biochemistry, and 3) genomic and epigenomic processes encoded by the nucleus. Students will be exposed to a systems approach in order to investigate complex interactions with a view towards understanding the impacts of the environment on biological interactions. Teaching will be undertaken by Western Sydney University-HIE staff who are world leaders in their respective research fields.

School Graduate Research School

Discipline Biological Sciences

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in the Bachelor of Research Studies/ Master of Research.

Assumed Knowledge

Students should have an undergraduate degree in Biology, Environmental Science, Medical Science, or Agricultural Science, with a background in biological sciences, including some knowledge of molecular biology, genetics, biochemistry and/or physiology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically discuss research articles and describe technologies using in biological research investigations.
2. Utilise an interdisciplinary systems approach to investigate biological processes.
3. Describe core technologies used in physiology, biochemistry or molecular biology.

4. Apply new technologies in practical biological research investigations.
5. Interpret and analyse data obtained from genomics technologies using commercial software.
6. Conduct investigations safely and ethically in a laboratory using experimental methodology.
7. Use spreadsheets, statistical and analytical programs to enter, analyse and graph data as well as draw appropriate conclusions from data.
8. Communicate findings correctly in oral or in written form using an appropriate style, as well as access the scientific literature to place research findings in a publication context.

Subject Content

Tools for Phenotyping and Studying Physiological Processes

1. Whole organism imaging, confocal microscopy and microelectrode techniques
 2. Principles of fluorescence, gas exchange and stable isotopes analysis
 3. Techniques for measuring carbon budgets
- Molecular and Biochemical Methods
4. Methods to quantify gene expression and protein abundance or activity
 5. Metabolomics: tools to quantify and identify primary and secondary metabolites
 6. Genetic engineering, genome editing and modification of organism traits

High Throughput Genetic and Epigenetic Technologies

7. Next generation sequencing and genomic applications
8. Genotype by sequencing and gene capture techniques
9. Deciphering the epigenome: DNA methylation, chromatin modification and RNA silencing

BLDG 0001 Academic Skills for Construction Management (WSTC Prep)

Credit Points 10

Legacy Code 700200

Coordinator Robert Paluzzano ([https://directory.westernsydney.edu.au/search/name/Robert Paluzzano/](https://directory.westernsydney.edu.au/search/name/Robert%20Paluzzano/))

Description This unit is designed to assist students to become successful independent and reflective learners. It introduces students to a range of theories and concepts to facilitate the development of practical skills and personal attitudes necessary for success in tertiary study. The unit also develops basic competencies in using computers and application software for the Building Design Management and Construction Management industries. The unit covers the use of word-processing software and spreadsheets. Students are also introduced to project management and design software.

School Western Sydney The College

Discipline Building Science and Technology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 0 Preparatory subject

Restrictions Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use both independent and collaborative learning strategies to advance the knowledge of the individual and that of their peers.
2. Communicate effectively through the development of critical reading, listening, speaking and writing skills in context.
3. Locate and use information technology systems and educational technologies to support learning and assessment.

4. Apply the process of reflection to learning experiences, in order to assess their own learning styles and ◆elearn how to learn◆f.
5. Identify and describe the basic computer concepts and us

Subject Content

Topic 1: Introduction to tertiary study

Topic 2: Blended learning

Topic 3: Advanced tertiary skills

Topic4: Research methods for construction studies;

- Introduction to scientific methods

- Report writing

- Data handling

- Critical reading

- Research and referencing (journal articles)

- Project report

Topic 5: Introduction to information systems and technology as they relate to the building and construction industry.

Topic 6: Introduction to the basics of proposing, designing, estimating and scheduling of a construction project

Topic 1: Introduction to tertiary study

Topic 2: Blended learning

Topic 3: Advanced tertiary skills

Topic4: Research methods for construction studies;

- Introduction to scientific methods

- Report writing

- Data handling

- Critical reading

- Research and referencing (journal articles)

- Project report

Topic 5: Introduction to information systems and technology as they relate to the building and construction industry.

Topic 6: Introduction to the basics of proposing, designing, estimating and scheduling of a construction project

BLDG 0002 Building Calculations (WSTC Prep)

Credit Points 10

Legacy Code 700318

Coordinator Robert Paluzzano ([https://directory.westernsydney.edu.au/search/name/Robert Paluzzano/](https://directory.westernsydney.edu.au/search/name/Robert%20Paluzzano/))

Description This unit is designed to assist students to become competent in the field of introductory senior mathematics. It introduces and reinforces mathematical skills in the areas of scale, application of scale, Pythagoras theory, trigonometry, sine and cosine, application of sine and cosine, building volumes, application of building volumes, gradients, application of gradients and thermal flow. Emphasis is placed on developing key competencies in building calculations.

School Western Sydney The College

Discipline Building Science and Technology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects MATH 0027 - Scientific Methods in Construction Management

Restrictions Students must be enrolled at The College in 6031 - Diploma in Building Design Management / Bachelor of Building Design Management, 7136 - Diploma in Building Design Extended, 6045 - Diploma in Construction Technology/Bachelor of Construction Technology or 7165 - Diploma in Construction Technology Extended.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply Scale and ratios
2. Apply Pythagoras Theory
3. Solve Trigonometric Equations
4. Apply Sine and Cosine to building calculations
5. Apply Building Volumes to building calculations
6. Apply Gradients to building calculations
7. Develop preliminary knowledge of Thermal Flow

Subject Content

Scale and Ratios

Pythagoras theory

Trigonometry

Sine and Cosine

Application of Sine and Cosine

Building volumes

Application of Building Volumes

Gradients

Application of Gradients

Thermal Flow

Legacy Code 301061

Coordinator Peng Zhang ([https://directory.westernsydney.edu.au/search/name/Peng Zhang/](https://directory.westernsydney.edu.au/search/name/Peng%20Zhang/))

Description This introductory unit describes the context of safety management in the Australian construction industry. The topics covered include: The poor long-term record in the construction industry on Workplace Health and Safety (WHS); Strategies for improving the industry performance; Introduction to hazard identification and risk management; and Individual safety awareness and personal responsibility.

School Eng, Design & Built Env

Discipline Building

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BLDG 1008 - Construction Work Safety (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

- Recognise the importance of workplace health and safety in the construction industry
- Recognise the WHS responsibilities and legal framework
- Understand the costs and causes of workplace injuries and accidents
- Conduct WHS risk assessment and management for construction projects

- Apply WHS principles and theories to systematically design and evaluate WHS strategies and interventions for construction projects

Subject Content

Workplace safety responsibilities
 Causes of accidents
 Risk management
 WHS hazards and control
 WHS legal framework
 Accident investigation
 Economics and ethics of construction safety
 Promoting safety: principles and strategies

Assessment

BLDG 1009 Environmental Building Design

Credit Points 10

Legacy Code 301062

Coordinator Laura Melo C E De Almeida ([https://directory.westernsydney.edu.au/search/name/Laura Melo C E De Almeida/](https://directory.westernsydney.edu.au/search/name/Laura%20Melo%20C%20E%20De%20Almeida/))

Description This unit explores the important parameters that are used to facilitate sustainable change in the built environment. Building design is a tool to minimise the use of scarce resources and reduce the impact on the natural Australian landscape. Improving the standard of liveability in urban and peri-urban communities is addressed through the development of holistic building design solutions.

School Eng, Design & Built Env

Discipline Construction Engineering

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BLDG 1010 - Environmental Building Design (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise the importance of energy and water efficiency to the sustainability of our built environment
2. Review the available strategies that can be used to improve the life cycle performance of buildings
3. Identify the major common weaknesses in current residential building design
4. Prioritise environmental parameters for a specific building project
5. Integrate their knowledge of environmental design in the context of a medium density housing development

Subject Content

Sustainable building design
Environmentally friendly building materials and systems
Green rating schemes for buildings
Energy, water and waste management in buildings

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task

BLDG 1011 Property Building

Credit Points 10

Legacy Code 301157

Coordinator Laura Melo C E De Almeida ([https://directory.westernsydney.edu.au/search/name/Laura Melo C E De Almeida/](https://directory.westernsydney.edu.au/search/name/Laura%20Melo%20C%20E%20De%20Almeida/))

Description This unit provides students with an overview of regulations and construction techniques with an emphasis on low-rise residential buildings in the Australian context. It covers general process; building regulations; environmental issues; surveying techniques; structural elements (footings, framing and bracing); envelope; services; fit-out and finishes.

School Eng, Design & Built Env

Discipline Construction Engineering

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Incompatible Subjects BLDG 1001 Building 1 BLDG 1003 Building 1 (WSTC)

Restrictions Students must be enrolled in the Property Major in the Bachelor of Business.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse and describe construction techniques required for low rise residential buildings including design of slab-on-ground and timber framing
2. Select materials and appropriate construction techniques based on regulatory, safety and environmental analyses and communicate these via technical documentation
3. Interpret building regulations pertinent to low rise residential buildings
4. Apply simple land and building surveying techniques
5. Analyse basic building services requirements for low rise residential buildings
6. Recognise environmental and social connections with the built forms
7. Identify typical low rise residential building defects and propose acceptable solutions

8. Identify the problems associated with building low rise residential in hazardous locations

Subject Content

Environmental impact of building
Housing styles
Design, documentation, tendering
Regulations
Surveying
Civil works and soil mechanics
Footing systems
Concrete slabs
Timber framing
Cladding
Services
Fit-out
Finishes
Building in hazardous locations
Alternative construction
Defects and faults

Assessment

BLDG 1012 Property Development Controls

Credit Points 10

Legacy Code 200435

Coordinator Za Manaf ([https://directory.westernsydney.edu.au/search/name/Za Manaf/](https://directory.westernsydney.edu.au/search/name/Za%20Manaf/))

Description Property Development Controls provides students with an understanding of the property planning process from both a State government and Local government perspective. The unit will cover the areas of planning instruments, planning process, property development control issues and planning applications. The unit will also address the areas of the valuation and development impact of planning and environment regulations, with specific reference to the regulatory framework that regulates planning and development in NSW and the impact on the property industry in Australia.

School Business

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Incompatible Subjects ARCH 2003 - Development Control

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or Major.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the role and function of State and Local government authorities in the property development process;
2. Explain the development application process for the main property types and the impact of development controls on property;
3. Explain the roles of State and Local government in the planning process;
4. Evaluate how environmental regulations influence the use and management of property.

Subject Content

Land use
Planning instruments
Essentials of environmental planning
Development controls
Land ownership
Heritage protection
Environmental regulations
Pollution control
Development application process

Prescribed Texts

Legacy Code 301219

Coordinator Alan Todhunter ([https://directory.westernsydney.edu.au/search/name/Alan Todhunter/](https://directory.westernsydney.edu.au/search/name/Alan%20Todhunter/))

Description This unit provides students with an introductory overview of the way in which scientific principles impact on the structure, fabric and performance of the built environment. Areas covered will include the concepts of force, energy and work in building structures; properties of common building materials; and significant aspects of heat, light and sound in buildings. All the theoretical content will be contextualised within examples drawn from the construction industry. Students will be able to recognise the critical data required for practical decision-making in the area of building technology.

School Eng, Design & Built Env

Discipline Building Science and Technology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the ways that forces act on building structures
2. Compare and contrast the properties of common building materials
3. Explain the causes of deterioration in building materials over time and suggest remedies for this deterioration
4. Distinguish the concepts of embodied energy and embodied carbon as they relate to buildings
5. Correlate the concepts of heat, light and sound transmission through building elements with decision making on materials for buildings

Subject Content

1. Introduction to scientific concepts as they impact on buildings
2. Energy, mass, force, velocity and acceleration in building structures
3. Properties of timber, steel, concrete and other common building materials
4. Durability and deterioration in building materials
5. Embodied energy and embodied carbon in building materials and systems
6. Management and control of heat, light and sound in buildings

BLDG 2001 Building Estimates and Tendering

Credit Points 10

Legacy Code 301207

Coordinator Sepani Senaratne ([https://directory.westernsydney.edu.au/search/name/Sepani Senaratne/](https://directory.westernsydney.edu.au/search/name/Sepani%20Senaratne/))

Description This unit will provide students with an understanding of the principles of design economics and the factors that affect the cost of buildings. Students will learn cost planning process and will be introduced to a range of estimating techniques that could be used at various stages of a building project. A particular focus would be

to understand the tendering process and how to prepare detailed estimates using unit rate method.

School Eng, Design & Built Env

Discipline Building Surveying

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BLDG 2010 - Estimating 1

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss various factors that affect building costs and estimating accuracy.
2. Prepare preliminary estimates at early stages of a building project
3. Evaluate elemental cost plans and approximate quantities.
4. Prepare detailed building estimates for tender submission using pricing principles.
5. Use standard computer programs for estimating.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects GEOM 2001 - Quantity Surveying 1

Assumed Knowledge

Building construction including residential, light industrial and small commercial.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the role of a quantity surveyor and the bills of quantities
2. Recognise the use of the ASMM in measuring and preparing Bills of Quantities.
3. Measure quantities of simple structures in accordance with the Australian Standard Method of Measurement of Building works (ASMM).
4. Utilise commercially available software for the production of Bills of Quantities.

Subject Content

1. Role of a Quantity Surveyor
2. Use the ASMM to prepare Bills of Quantities
3. Introduction to the Australian Standard Method of Measurement of Building Works (ASMM)
4. Measurement of common building trades such as groundworks, concrete, formwork, reinforcement, finishes, masonry and woodwork.
5. Preparation of bills of quantities for simple structures

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes	20	N	Individual
Professional Task	Approximately 40 7 pages	40	N	Individual
Final Exam	2 hours	40	N	Individual

Prescribed Texts

- The Australian Institute of Quantity Surveyors (AIQS), New Zealand Institute of Quantity Surveyors (NZIQS), Master Builders Australia & Registered Master Builders Association of New Zealand 2018, Australian and NZ Standard Method of Measurement of Building Works (ANZSMM) 2018, Australian Institute of Quantity Surveyors, New Zealand Institute of Quantity Surveyors and Master Builders Australia Limited, Sydney.

BLDG 2003 Building Regulations Studies

Credit Points 10

Legacy Code 300885

Coordinator Payam Rahnamayiezekavat ([https://directory.westernsydney.edu.au/search/name/Payam Rahnamayiezekavat/](https://directory.westernsydney.edu.au/search/name/Payam+Rahnamayiezekavat/))

Description This unit develops an awareness of the regulations used to control risk in buildings. Major sources of risk, such as fire and public health, are identified and controlled. Building regulations of high risk regions, such as cyclonic, seismic and bushfire-prone areas, are also discussed. The unit emphasises the safety of vulnerable occupants, such as young children, disabled people and the elderly. The unit also explores recent developments in the National Construction Code (NCC: formerly BCA) concerning energy efficiency.

School Eng, Design & Built Env

Discipline Building Construction Management

BLDG 2004 Built Heritage

Credit Points 10

Legacy Code 301085

Coordinator Mary Hardie ([https://directory.westernsydney.edu.au/search/name/Mary Hardie/](https://directory.westernsydney.edu.au/search/name/Mary%20Hardie/))

Description This unit explores the history of building design in Australia and applies this contextual knowledge to the design of additions to existing buildings, as well as, to infill development in heritage areas. Built form, scale, materials, finishes and streetscape are considered so that new structures complement rather than detract from existing heritage buildings. The appropriateness of preservation, restoration, renovation, retrofit and adaptation strategies for older buildings is examined in the context of market and regulatory constraints on built heritage.

School Eng, Design & Built Env

Discipline Building

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the features of the historic styles that have characterised building in Australia over the last 250 years
2. Identify the problems most commonly encountered when working on design in heritage buildings or heritage precincts
3. Prioritise the preservation of essential elements of heritage structures
4. Construct an argument for emphasising the difference between old and new work rather than imitating historical styles
5. Apply knowledge of heritage practice in the design of an appropriate major addition to a heritage structure

Subject Content

Historic building styles

Heritage preservation

Additions and alterations to heritage buildings

Infill development in heritage areas

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Coordinator Robert Paluzzano ([https://directory.westernsydney.edu.au/search/name/Robert Paluzzano/](https://directory.westernsydney.edu.au/search/name/Robert%20Paluzzano/))

Description In this unit, students will examine and investigate the contractual aspects with respect to time, cost, quality and scope in building contracts. The students will develop technical skills for the administration of construction contracts and be able to prepare payment certificates and cash flow statements.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BLDG 2011 Contract Administration

Incompatible Subjects GEOM 2002 Quantity Surveying 2

Restrictions Students must be enrolled at The College. Students in Extended programs must have passed 30 CPs of preparatory subjects prior to enrolling in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify various forms of contracts and related standards
2. Identify key contractual aspects in a building contract
3. Examine and evaluate contractual claims
4. Prepare progress valuations and reports for different contract types
5. Prepare cash flow forecasts for a construction project

Subject Content

- 1.Types of contracts - fixed price, cost plus and measurement contracts
- 2.Standard form contracts
- 3.Post contract management
- 4.Insurance and Bonds
- 5.Subcontracting arrangements and supply contractor relationships
- 6.Valuation of change orders
- 7.Claims management
- 8.Progress reports, payments, and compliance monitoring
- 9.Cash flow forecast and financial statements
- 1.Types of contracts - fixed price, cost plus and measurement contracts

BLDG 2014 Work-Integrated Learning in Sustainable Construction

Credit Points 10

Legacy Code 301429

Coordinator Sepani Senaratne ([https://directory.westernsydney.edu.au/search/name/Sepani Senaratne/](https://directory.westernsydney.edu.au/search/name/Sepani%20Senaratne/))

Description In this unit, students will engage in project-based learning related to Sustainable Construction to practice sustainable approaches in real construction projects. Students will select a project with an agreed industry partner, which will involve sustainable construction practices, for example: sustainability assessments, managing green building projects, carbon emission assessments, cost-benefit analysis and the circular economy. This unit contributes towards the skills required for a work-ready graduate and allows the student to plan, undertake and report on a specific aspect of practice in the context of work.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Restrictions Students must be enrolled in 3782 Bachelor of Construction Management Advanced (Honours) AND have applied and selected by a partner organisation before enrolling in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Manage various aspects of a project related to Sustainable Construction, including planning and implementation, to produce agreed deliverables that align with feedback
2. Conduct research on the theoretical basis on the selected sustainable construction project demonstrating ethical, digital and information literacy
3. Reflect on the learning and professional development achievements related to the selected sustainable construction project
4. Apply communication and collaboration skills through the selected sustainable construction project and the workplace
5. Integrate appropriate sustainability principles skills into the construction management context

Subject Content

Students will learn any of the following sustainable construction practices along with relevant theoretical knowledge through research:

- sustainability assessments,
- managing green building projects,
- carbon emission assessments,
- cost-benefit analysis,
- circular economy.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BLDG 3001 Building Design Process

Credit Points 10

Legacy Code 301087

Coordinator Mohammad Reza Razavi ([https://directory.westernsydney.edu.au/search/name/Mohammad Reza Razavi/](https://directory.westernsydney.edu.au/search/name/Mohammad%20Reza%20Razavi/))

Description Building design is an iterative process. In this subject students will gain experience in generating design proposals and responding to simulated client, regulator and stakeholder feedback. Holistic design solutions that address economic, environmental and social issues will be generated for realistic building projects with an emphasis on regulatory compliance and project value for money.

School Eng, Design & Built Env

Discipline Building

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BLDG 3007

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Respond to a design brief for a building project in western Sydney with a series of potential building design solutions.
2. Evaluate the appropriateness of several different solutions to the building design problem especially relating to current building regulations.
3. Recommend a particular preferred solution arguing its benefits in terms of cost, quality and safety.
4. Reflect on feedback relating to the proposed design and make suitable changes in response.
5. Illustrate the building design through a fully rendered 3D CAD model.

Subject Content

1. Mixed commercial building project design
2. National Construction Code (NCC) compliance
3. Design solution evaluation with respect to Australian Standards and Planning regulations
4. Iterative response to stakeholder feedback

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Preliminary sketch building design	3D CAD model	30	N	Individual

BLDG 3004 Construction Information Systems

Credit Points 10

Legacy Code 200503

Coordinator Sameera Wijesiri Pathirana ([https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/](https://directory.westernsydney.edu.au/search/name/Sameera%20Wijesiri%20Pathirana/))

Description This unit is designed to provide skills and knowledge for information management technology and practice as it relates to the building industry. The unit gives an overview of information management, data collection and storage, information classification systems, communications, specialist computer applications and artificial intelligence.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Assumed Knowledge

Students must be familiar with spreadsheet and database software. Students should also have a basic understanding of contract administration.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss information management requirements in general and specifically as they relate to the building industry.

2. Explain the essential components of an integrated information management system for all stages of building procurement.
3. Discuss technology advances in hardware and software in information management including data collection, storage, retrieval, analysis and communication.
4. Demonstrate the ability to effectively use spreadsheet and database management software for complex building related applications.
5. Discuss specialist computer applications for building including expert systems.
6. Develop computer applications using spreadsheet and database software, for project management processes

Subject Content

- introduction to information management
- information characteristics
- information systems
- information management in The Building industry
- Classification systems and integration between different Building procurement phases
- data collection from construction site
- data storage systems
- data analysis and Reporting in construction
- advanced Technology - Hardware for construction industry
- advanced Technology - software used in construction industry
- communication Technology used in construction industry
- expert systems used in construction industry such as NATHERS, FIRECAL, BCAIDER
- future directions in Building information systems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Essay	Group; 2000 words	20	N	Both (Individual & Group)
Applied Project	Each students collect data contract admin data from a construction site and store and analyse data using MS Excel; 50% mark is allocated for their own project and 50% for group effort.	25	N	Group
Quiz	1 hour	20	N	Individual

Applied Project	Group of two; each students are required to enter 100 subcontractor details and mark is distributed 50:50 for group and individual work)	15	N	Group
Quiz	1 hour	20	N	Individual

Prescribed Texts

- Suitable computer equipment and software (Excel, Access, Buildsoft, MS Project, and Archi CAD). Software is available at the Blacktown Campus computer labs. Students can purchase their own software and practice outside the class time.
- Lecture and Tutorial Notes are updated every year and posted on the elearning site.
- A Book of reading will be provided via vUWS;

Legacy Code 300886

Coordinator Don Mason ([https://directory.westernsydney.edu.au/search/name/Don Mason/](https://directory.westernsydney.edu.au/search/name/Don%20Mason/))

Description This unit is designed to allow the student to gain experience with the complexity of the construction industry by integrating knowledge from earlier units. The unit involves group work on construction planning and management, regulatory control and client liaison required for initiating and completing a residential construction project.

School Eng, Design & Built Env

Discipline Construction Engineering

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BLDG 1001 AND
ARCH 1001 AND
BLDG 1005

Equivalent Subjects BLDG 2008 - Construction in Practice 1

Assumed Knowledge

Local Government planning requirements, residential construction details, quantity surveying, contract documentation, site planning.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Work cooperatively in small groups
2. Report and present construction project information in a businesslike and professional manner in meetings with a project client/developer
3. Synthesise knowledge gained from previous units for application in a medium sized residential building project
4. Fully document a residential construction project including producing working drawings, specifications and details
5. Generate estimates and schedules for a medium sized residential building project
6. Research and evaluate data on market forces that influence the successful delivery of residential construction projects
7. Analyse the requirements for construction site safety programs on residential building projects
8. Outline a system for ensuring quality on residential building projects

Subject Content

Planning issues in connection with housing development
Sustainable design
Costing
Bills of quantities
Construction management
Building law
Construction technology
Procurement
Contract administration

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Client Progress Meetings	Five fortnightly group meetings of twenty minutes duration as scheduled - group	30	N	Group
Individual assignment	2000 word report	20	N	Individual
Final submission	Written and graphics - full project documentation with specified individual contributions	30	N	Individual
Final project presentation (seminar style)	30 min group presentation, individually marked	20	N	Individual

Coordinator Anthony Butera ([https://directory.westernsydney.edu.au/search/name/Anthony Butera/](https://directory.westernsydney.edu.au/search/name/Anthony%20Butera/))

Description Construction and Property development is the most complex activity in the Australian economy. There are many professional groups involved in the sector. This unit will train students in the negotiation skills required to successfully complete projects from the perspective of a construction manager, building surveyor, planner, civil engineer, construction lawyer and property developer.

School Eng, Design & Built Env

Discipline Building, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects BLDG 2009 - Decision Making for Construction Professionals

Learning Outcomes

On successful completion of this subject, students should be able to:

- appreciate the importance of negotiation in the built environment
- identify common problems that frustrate a successful negotiation outcome
- explore the common negotiation styles of stakeholders
- investigate the alternatives to direct negotiation
- understand the deficiencies of distributive bargaining; eg. "Split-the-difference"
- apply integrative negotiation strategies

Subject Content

- The value of negotiation
- Negotiation flaws
- Negotiation styles
- Mediation
- Distributive agreements
- Integrative agreements

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Reflection	1,000 words	15	N	Individual
Case Study	1,500 words	20	N	Individual
Presentation	16 minutes	25	N	Group
Report	3,000 words	40	N	Individual

Prescribed Texts

- Fisher, R, Ury, W & Patton, B 2012, Getting to Yes; Negotiating an agreement without giving in, 3rd edn, Arrow Business Books, London.
- Voss, C & Raz T 2016, Never Split the Difference: Negotiating as if Your Life Depended on it, Harper Business, New York.

BLDG 3009 Quality and Value Management

Credit Points 10

Legacy Code 300748

Coordinator Ali Al-Ashwal ([https://directory.westernsydney.edu.au/search/name/Ali Al-Ashwal/](https://directory.westernsydney.edu.au/search/name/Ali%20Al-Ashwal/))

Description Introduces students to the concepts of quality systems value management techniques and their application to the built environment. Students will gain knowledge of quality assurance and value management theories, techniques and principles so that they can apply as they enter into their professional careers.

School Eng, Design & Built Env

Discipline Construction Engineering

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 4735 - Quality and Value Management

Learning Outcomes

On successful completion of this subject, students should be able to:

1. apply value management and life cycle costing techniques in construction projects.
2. write a Quality Manual and Plan for the company and project.
3. apply statistical quality control techniques for analysis of data gathered on quality characteristics from medium to large complex building projects

Subject Content

- introduction to value management, value Engineering and value management procedures.
- function analysis.
- introduction to The meaning and evolution of quality in construction.
- quality procedures used in construction.
- quality systems related to construction including Australian and international standards.
- quality tools including cause and effect diagrams, flow charts, check sheets and Pareto diagrams.
- statistical quality control in construction.

BLDG 3010 Building Cost Studies

Credit Points 10

Legacy Code 301234

Coordinator Jun Wang ([https://directory.westernsydney.edu.au/search/name/Jun Wang/](https://directory.westernsydney.edu.au/search/name/Jun%20Wang/))

Description This Subject provides students with advanced quantity surveying techniques for the evaluation of construction costs in the construction management and built environment context. Students learn to perform various cost studies, consider sustainability issues and make whole life cost choices that contribute to cost effective construction projects. The tools and techniques students learn are essential in dealing with increasing complexity in the industry.

School Eng, Design & Built Env

Discipline Building Construction Economics

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Assumed Knowledge

Building construction including residential, light industrial and small commercial, basic building measurement and estimating.

Learning Outcomes

1. Evaluate cost management and control process
2. Examine various cost modelling techniques
3. Analyse cost information and perform cost analysis
4. Analyse feasibility of project
5. Make informed decisions based on whole-life cost and sustainable considerations

Subject Content

1. Overview of cost management and control process
2. Feasibility studies

3. Cost benefit analysis
4. Cost modelling
5. Cost information and cost analysis
6. Whole-life costing
7. Economics of sustainability

BLDG 3011 Construction Business Management

Credit Points 10

Legacy Code 301427

Coordinator Matt Stevens ([https://directory.westernsydney.edu.au/search/name/Matt Stevens/](https://directory.westernsydney.edu.au/search/name/Matt%20Stevens/))

Description This unit is centred around the dynamics of managing a construction contracting enterprise. Student groups act as a Board of Directors to plan, communicate, execute, and adjust strategy as they pursue to optimise their firm's outcomes in an online competitive game. Knowledge areas of staffing, finance, labour management, risk management and tendering are challenged. Each week, student groups are scored objectively and given feedback. This shows the team the strengths and weaknesses of the prior week's decision making. Academic staff will work with each student group to refine and improve understanding of the complex dynamics involved. Assessments will be based on decision-making improvement and mastery of strategic and operational principles.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Restrictions Students must have passed 80 credit points to enrol in this subject.

Assumed Knowledge

Basic knowledge of the building construction industry and management principles.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the strategic and operational issues of a construction enterprise
2. Apply iterative problem solving approach to optimise the firm's outcomes
3. Apply principles of effective management to a construction firm
4. Analyse situational factors
5. Evaluate strategic and operational results
6. Create a competitive strategic and operational plan

Subject Content

Strategic planning
Operational planning
Human resource management
Tendering and procurement
Marketing
Financial strategies

Coordinator Sepani Senaratne ([https://directory.westernsydney.edu.au/search/name/Sepani Senaratne/](https://directory.westernsydney.edu.au/search/name/Sepani%20Senaratne/))

Description In this unit, students will engage in project-based learning related to Global Construction practices in the industry. Students will select a project with an agreed industry partner on construction and management of mega or complex projects to study aspects such as stakeholder management and communication, modern construction methods, productivity and quality assurance. This unit contributes towards the skills required for a work-ready graduate and allows the student to plan, undertake and report on a specific aspect of practice in the context of work.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Restrictions Students must be enrolled in 3782 Bachelor of Construction Management Advanced (Honours) AND have applied and selected by a partner organisation before enrolling in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Manage various aspects of a project related to Global Construction, including planning and implementation, to produce agreed deliverables that align with feedback
2. Conduct research on the theoretical basis on the selected global construction project demonstrating ethical, digital and information literacy
3. Reflect on the learning and professional development achievements related to the selected global construction project
4. Apply communication and collaboration skills through the selected global construction project and the workplace
5. Analyse specific knowledge and skills for work/projects in complex, mega, global construction or management contexts

Subject Content

Students will learn construction and management of mega projects/ global projects/ complex projects and the like along with relevant theoretical knowledge through research. Topics may include:

- Productivity
- Product compliance and quality assurance
- Modern construction methods
- Stakeholder management and communication

Teaching Periods

BLDG 4001 Building Design Project 1

Credit Points 20

Legacy Code 301099

Coordinator Mary Hardie ([https://directory.westernsydney.edu.au/search/name/Mary Hardie/](https://directory.westernsydney.edu.au/search/name/Mary%20Hardie/))

Description In this subject, students will source a suitable design project to complete as a capstone work which illustrates the skills they have developed throughout their program. The project will contain a level of complexity exceeding that of previous building designs produced in the program. Diverse stakeholder input on the projects impact will be gathered and assessed. Knowledge gained in this subject will benefit students aspiring to roles in the integrated building design industry and the delivery of building projects.

School Eng, Design & Built Env

Discipline Building

Student Contribution Band HECS Band 2 20cp

Level Undergraduate Level 4 subject

Pre-requisite(s) BLDG 3001

Incompatible Subjects CIVL 4018 Building Design Project 1 (Honours)

Restrictions

Students must be enrolled in Bachelor of Building Design Management or Diploma in Building Design Management/Bachelor of Building Design Management. Students must have successfully completed 220 credit points.

Assumed Knowledge

Students should be familiar with the content from the first three years of the Building Design Management degree, including expertise in CAD, iterative design process and construction technology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Generate a design brief for a building project with sufficient detail to make a preliminary judgement on project feasibility
2. Construct a performance specification for a building design based on careful analysis of site conditions
3. Provide justification for particular design decisions which would result in making appropriate design choices
4. Reflect on feedback relating to the proposed sketch design and make responsive changes on the issues raised
5. Illustrate the building design through a fully rendered 3D CAD model

Subject Content

Planning approval requirements

Complex and high-rise building projects

Buildings incorporating multiple usages

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Report	1500 words	20	N	Individual

Coordinator Xiaohua Jin ([https://directory.westernsydney.edu.au/search/name/Xiaohua Jin/](https://directory.westernsydney.edu.au/search/name/Xiaohua%20Jin/))

Description This subject is designed to provide students with: an understanding of economic principles, national and international economic issues; general investment issues; how the national and international economy functions; how the building industry and the building firm relates to the national and international economy; and how economic reasoning may be applied to various problems in the building industry.

School Eng, Design & Built Env

Discipline Building Construction Economics

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Co-requisite(s) BLDG 4012 Industry Based Learning for students in 2607 Bachelor of Construction Management

Assumed Knowledge

Building construction including residential, light industrial and small commercial as covered in the subjects Building 1 and Building 2 and building measurement as covered in quantity surveying 1 and Estimating as covered in Estimating 1.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Contextualise the role of the Australian construction industry in the local and international economy
2. Explain the supply and demand of goods and services in the general economy and in the context of the Australian construction industry
3. Discuss the relationship between prices and output in a general economic system
4. Summarise the national economic policy including fiscal and monetary policy
5. Develop a business plan for an Australian construction firm
6. Examine the effect of globalisation on the local economy
7. Explain competencies required for successful business development using theories and principles of economics

Subject Content

Construction economics

Construction Project finance

Fiscal policy. Monetary policy

The supply and demand for goods and services

The Structure of the Construction Industry

Economic Policies and the Building Industry

Business Planning for construction firms

Prices and output

National economic policy

International economics

Globalisation

Current economic issues and future directions

Legacy Code 300726

Coordinator Yingbin Feng ([https://directory.westernsydney.edu.au/search/name/Yingbin Feng/](https://directory.westernsydney.edu.au/search/name/Yingbin%20Feng/))

Description The aim of this unit is to give students a hands-on experience of the tendering process for construction professionals. Students undertake a team research project to determine the optimum parameters for a civil/building infrastructure estimation.

School Eng, Design & Built Env

Discipline Building Construction Economics

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Equivalent Subjects LGYB 5406 - Estimating 2

Assumed Knowledge

Building construction including residential, light industrial and small commercial as covered in the subjects Building 1 and Building 2 and building measurement as covered in Building Quantities and Estimating as covered in Estimating 1.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Prepare a tender for a major infrastructure project;
2. Identify and discuss ethical issues relating to the tendering process
3. Demonstrate how document control is managed.
4. Price and code plant and material, labour, built-up and all-in unit rates.
5. Calculate the preliminaries including those for remote areas.
6. Produce a Bill of quantities documentation: extend and checks; making comparisons: net rates bill; and civil estimating.
7. Conduct statistical analyses, including: regression analysis and Monte Carlo simulation to achieve optimum project cost.

Subject Content

Tendering and estimating processes;

Estimating ethics;

Document control including receipt & send-out procedures;

Pricing and coding: all-in rates for plant and material, labour rates, build up unit rates;

Calculation of preliminaries including considerations for remote areas;

Bill of quantities documentation: extend and checks; making comparisons: net rates bill; civil estimating;

Statistical analysis, including: regression analysis and Monte Carlo simulation.

All in accordance with the current edition of the Australian Standard Method of Measurement of Building Works, and the Guide to Estimating Practice for Building Work.

Assessment

Legacy Code 300536

Coordinator Vivian Tam ([https://directory.westernsydney.edu.au/search/name/Vivian Tam/](https://directory.westernsydney.edu.au/search/name/Vivian%20Tam/))

Description This unit will enhance the ability of students to investigate a selected topic with a construction industry focus and involves preparation of a literature review. Content includes mechanics of a literature review, use of research (or strategic planning) in the construction industry, development of high-value competencies in terms of marketing, organisational structure and project management.

School Eng, Design & Built Env

Discipline Construction Engineering

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Pre-requisite(s) Successful completion of 200 credit points for students in 2607 Bachelor of Construction Management and 3697 Bachelor of Construction Management Studies (exit only) Successful completion of 130 credit points for students enrolled in Bachelor of Construction Management Studies Bachelor of Laws

Equivalent Subjects LGYB 5398 - Major Project 1

Restrictions Successful completion of 200 credit points.

Assumed Knowledge

This is a research subject designed to be taken during the final year of the Bachelor of Construction Management standard program. Students should have a comprehensive knowledge of problem solving research in the construction industry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Justify the role of research and strategic planning in the construction industry.
2. Plan and implement a practical research project in construction.

- Critically analyse the existing body of knowledge in a defined area of this discipline.
- Communicate their research ideas and plans through written forms of presentation.

Subject Content

Specific content will vary depending on the nature of the project and the research methodology adopted. However, some generic content may include:

- research topic selection and definition,
- literature review,
- critique,
- summarising,
- research methodology,
- research planning,
- research and analytical techniques, and
- technical/professional writing.

BLDG 4006 Modern Construction Enterprises

Credit Points 10

Legacy Code 301158

Coordinator Matt Stevens ([https://directory.westernsydney.edu.au/search/name/Matt Stevens/](https://directory.westernsydney.edu.au/search/name/Matt%20Stevens/))

Description In this unit the pace of change in the construction industry will be addressed. Particular emphasis is placed on the ways in which construction businesses need to adapt their practices to deal with increased digitisation, industrialisation and globalisation. The impact of disruptive innovation on 'back of house' operations in construction enterprises will be studied and trends identified.

School Eng, Design & Built Env

Discipline Building Construction Economics

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Assumed Knowledge

An understanding of the construction industry context and familiarity with organisational structures common in construction businesses.

Learning Outcomes

On successful completion of this subject, students should be able to:

- Analyse the opportunities presented by the changing global environment in construction
- Compare and contrast the trajectories of attempts at innovation in the construction industry
- Predict major trends in construction modernisation
- Hypothesise on the factors that contribute to successful modern construction enterprises
- Make an original case for the adoption of changes to the way construction businesses are structured
- Re-imagine construction enterprise models for the Indo-Pacific region
- Analyse the opportunities presented by the changing global environment in construction
- Predict major trends in construction modernisation
- Hypothesise on the factors that contribute to successful modern construction enterprises
- Make an original case for the adoption of changes to the way construction businesses are structured
- Re-imagine construction enterprise models for the Indo-Pacific region

Subject Content

- Increasing digitisation of construction industry processes
- Industrialisation of construction methodology and culture
- Off-site and off-shore production
- Globalisation in construction
- Implications of Free Trade Agreements for construction productivity
- Insurance and risk in a global market
- Construction enterprises and entrepreneurship
- Impact of the collaborative economy

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task

BLDG 4007 Modern Construction Projects

Credit Points 10

Legacy Code 301159

Coordinator Matt Stevens ([https://directory.westernsydney.edu.au/search/name/Matt Stevens/](https://directory.westernsydney.edu.au/search/name/Matt%20Stevens/))

Description In this unit, accelerating changes in the way construction projects are procured and delivered will be studied. Innovations relating to pre-site construction and to productivity measurement will be evaluated. Quality assurance and risk management will be considered in the light of new project delivery systems. Ways to improve end user satisfaction with construction project delivery will be addressed.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Assumed Knowledge

An understanding of standard building processes and familiarity with how they impact on project delivery.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the available indices that are used to measure construction productivity
2. Construct a case for improving project efficiency by means of industrialising construction projects
3. Examine ways to address quality assurance in a globalised construction market
4. Review the impact of the need for buildings to be adaptable over their useful lifetime
5. Theorise about the way to ensure that end users receive economic, environmental and social value from their buildings

Subject Content

Measuring construction productivity

Pre-construction effectiveness indicators

Fabrication versus assembly

Quality assurance in globalised construction

Evidence-based decision making

Durability, adaptability and sustainability

Maintaining public confidence in construction project delivery

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Annotated Bibliography	1000 words	20	N	Individual
Case Study	2000 words	40	N	Individual
Presentation	15 mins	10	N	Individual

BLDG 4008 Digital Construction

Credit Points 10

Legacy Code 301225

Coordinator Srinath Perera ([https://directory.westernsydney.edu.au/search/name/Srinath Perera/](https://directory.westernsydney.edu.au/search/name/Srinath%20Perera/))

Description This unit offers knowledge and skills essential for a successful application of Building Information Modelling (BIM) in the context of built environment. Building Information Modelling (BIM) has the potential to improve integration between design and construction processes, reduce design discrepancies and rework, optimise project time and cost performance, and manage risks. Students will develop an understanding of the generation, reviewing and application of 3D, 4D and 5D BIM models in building projects. Virtual and augmented reality, spatial information capture and performance management systems will also be introduced. This unit will be taught through intensive practice-based workshops and computing labs, enabling students to build skills in virtual design and construction processes.

School Eng, Design & Built Env

Discipline Building Science and Technology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Assumed Knowledge

Building construction including residential, light industrial and small commercial, basic building measurement and estimating.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the principles and application of various digital technologies in the context of built environment
2. Apply knowledge in the review and development of 3D BIM models for design, fabrication and construction
3. Interpret digital documentation used within development approvals and building certification, tendering and construction
4. Apply BIM technologies to effectively manage the interface between design and construction processes, cost estimating, scheduling and control of construction projects

Subject Content

1. Overview of information technology in the built environment
2. Create 3D BIM models
3. Construction scheduling using BIM
4. Cost estimating using BIM
5. Design coordination using BIM
6. Introduction to other digital technologies
7. Digital document management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BLDG 4011 Construction Thesis

Credit Points 20

Legacy Code 301244

Coordinator Peng Zhang ([https://directory.westernsydney.edu.au/search/name/Peng Zhang/](https://directory.westernsydney.edu.au/search/name/Peng%20Zhang/))

Description In this subject, students continue their research based on the literature review and research design submitted as part of the Construction Research Methods, under the close guidance of the same research supervisor. The research will be extended using appropriate research methods to perform data collection, data analysis and research conclusions. The students will submit an original thesis report on a research endeavour (continued from the research report in unit Construction Research Methods). In addition to the specialist knowledge on the chosen research topic, students will learn a range of

skills including academic writing, project management, critical thinking and analytical skills.

BLDG 4012 Industry Based Learning

Credit Points 0

Legacy Code 300724

Coordinator Brendan Kirkland ([https://directory.westernsydney.edu.au/search/name/Brendan Kirkland/](https://directory.westernsydney.edu.au/search/name/Brendan%20Kirkland/))

Description Students are required to undertake 1200 hours of industry based experience as required by course and professional accreditation bodies.

School Eng, Design & Built Env

Discipline Building Science and Technology

Student Contribution Band

Level Undergraduate Level 4 subject

Equivalent Subjects LGYB 5394 - Industry Based Learning

Restrictions

Students must be enrolled in Bachelor of Construction Management, Bachelor of Construction Management Advanced (Honours), Bachelor of Building Design Management or Diploma in Building Design Management/Bachelor of Building Design Management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Students will gain relevant industry experience in a range of categories in the building industry

Subject Content

1. Design: Design, drafting, documentation, specification writing and preparing tender packages
2. Construction: Working as builders labourers, tradesmen, foremen supervisors and quality controllers
3. Commercial Management: Contract administration, businesses administration, sales, marketing and cost control
4. Estimating: Quantity surveying, estimating, tendering, preparing quotations, feasibility studies and pricing variations.
5. Project Management: Construction planning, project management, property development, progress reporting and works scheduling
6. Building Materials: Sales, purchasing, stores and stock control
7. Miscellaneous related activities: Material testing, research local government building departments, tutoring, client or third party inspection and supervision

Assessment

BLDG 4013 Work-Integrated Learning in Construction Leadership

Credit Points 10

Legacy Code 301433

Coordinator Sepani Senaratne ([https://directory.westernsydney.edu.au/search/name/Sepani Senaratne/](https://directory.westernsydney.edu.au/search/name/Sepani%20Senaratne/))

Description In this unit, students will engage in project-based learning related to Construction Leadership within an industry framework. Students will select a project with an agreed industry partner to develop any of the following managerial and leadership skills in construction settings: organisation management and applications, strategic management, change management, corporate social responsibility, human resource management, knowledge management and organisational resilience. This unit contributes towards the skills required for a work-ready graduate and allows the student to plan, undertake and report on a specific aspect of practice in the context of work.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Restrictions Students must be enrolled in 3782 Bachelor of Construction Management Advanced (Honours) AND have applied and selected by a partner organisation before enrolling in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Manage various aspects of a project related to Construction Leadership, including planning and implementation, to produce agreed deliverables that align with feedback
2. Conduct research on the theoretical basis of the selected construction leadership project demonstrating ethical, digital and information literacy
3. Reflect on the learning and professional development achievements related to the selected construction leadership project
4. Apply communication and collaboration skills through the selected construction leadership project and the workplace
5. Adapt to change, uncertainty and challenges with innovative and justifiable solutions for the industry
6. Demonstrate leadership capability and professional development in carrying out the WIL based project

Subject Content

Students will learn any of the following construction leadership practices along with relevant theoretical knowledge through research:

- organisation management and applications,
- strategic management,
- change management,

- corporate social responsibility,
- human resource management,
- knowledge management,
- organisational resilience

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Proposal	1000 words	20	N	Individual

Coordinator Robert Osei-Kyei ([https://directory.westernsydney.edu.au/search/name/Robert Osei-Kyei/](https://directory.westernsydney.edu.au/search/name/Robert%20Osei-Kyei/))

Description This unit introduces various contract types and risks involved in construction project management. The unit extends to examining contractual claims management and procedures together with alternative dispute resolution methods. The unit will further help students to understand change management process and develop a change management plan.

School Eng, Design & Built Env

Discipline Building Construction Economics

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Basic knowledge of construction management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Compare various forms of contracts and their risks distribution among construction parties
2. Analyse project documentations and records associated with project contracts
3. Develop a change management plan for a construction project
4. Evaluate contractual claims and their management process within construction projects

5. Recommend an alternative dispute resolution method in case of a construction dispute

Subject Content

Construction contracts and risks distribution
Project documentation and records
Managing changes in construction
Claims management
Alternative Dispute Resolution

BLDG 7002 Building Regulations

Credit Points 10

Legacy Code 300947

Coordinator Payam Rahnamayiezekavat ([https://directory.westernsydney.edu.au/search/name/Payam Rahnamayiezekavat/](https://directory.westernsydney.edu.au/search/name/Payam%20Rahnamayiezekavat/))

Description This unit introduces the role and functions of the building surveyor and the National Construction Code of Australia (NCCA). The topics include building legislation, NCCA general provisions, structure and philosophy. Students are required to understand the objectives, the function statements and the performance requirements of various sections of Volume One of NCCA. The concept of performance based approach is discussed and compared with the prescriptive approach. The content covers the relationship between research in the development of building codes and the role played by approval/certifying authorities in building assessment and approval. Legal obligations of building surveyors, their tasks of assessment, enforcement and documentation are also explained.

School Eng, Design & Built Env

Discipline Building Surveying

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects BLDG 7010 - Fire and Building Regulations

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

This subject assumes that the student has undertaken study in building construction, building surveying, engineering, architecture or a related area or has the relevant AQF qualification and gained basic building regulation knowledge by working in the construction industry in an appropriate capacity for at least four years.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret and apply building and building related legislations
2. Explain the fundamental concepts and intent of the NCCA
3. Explain various assessment methods contained in the NCCA
4. Discuss the provisions of the NCCA for various building classes.
5. Identify disparities between designs and building code provisions
6. Assess building designs according to their NCCA compliance and explain how performance requirements can be met
7. Describe the involvement of relevant stakeholders in the decision making process

Subject Content

Introduction to the National Construction Code of Australia

Structure and format of NCCA Volume One

General provisions of NCCA Volume One

Performance based regulations and verification methods

Fire resisting construction

Access and egress

Essential fire safety measures

Health, amenity and energy efficiency

NCCA and the related standards and guidelines

Working with performance requirements of the NCCA

Building Surveying practice

Role and functions of building surveyors and Building Acts and Regulations.

Building surveying practice, legal obligations, enforcement and accreditation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BLDG 7003 Building Studies

Credit Points 10

Legacy Code 300716

Coordinator Sameera Wijesiri Pathirana (<https://directory.westernsydney.edu.au/search/name/SameeraWijesiriPathirana/>)

Description This unit describes and analyses the technological, socio-economic and sustainability factors that influence the building industry. The topics include advances in contemporary issues affecting sustainability and energy conservation, access and adaptable housing, safety in special areas and building design in accordance with the relevant legislative requirements. Use of assessment tools for sustainability is covered. Discussions are also made on development management, the roles and the relationship between building owners / occupiers, developers and building surveyors.

School Eng, Design & Built Env

Discipline Building

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 5426 - Building Studies

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

This subject assumes that the student has undertaken undergraduate study in building surveying, planning or related areas or has gained the equivalent building construction knowledge by working in the construction industry in an appropriate capacity for at least four years.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe current research and advances in building industry, including access, energy efficiency and safety.
2. Describe the impact and effect of the regulatory system on contemporary building issues such as access, energy efficiency and safety provisions.
3. Critically analyse and generate complex building solutions against the requirements for sustainability, access and safety.
4. Explain the roles and the relationship between building owners/ occupiers, developers and building surveyors in the operation and maintenance of buildings.

Subject Content

The impact and effect of regulatory bodies on occupant health and amenity in the building industry.

Philosophy, cultural significance and cost-effectiveness of energy conservation and its application to building construction.

Sustainable design processes and typical features of sustainable design and construction.

Housing design, sustainability and energy efficiency assessment tools, such as BASIX.

Sustainability and NCC requirements for Class 2 to 9 - overview of Section J.

NCC requirements for thermal insulation and lighting in building systems

Current research and advances in building systems relating to energy efficiency and sustainability

Access and arrangements for disability and adaptability for older persons.

Accessibility requirements for car parking and pools.

Facilitation of access and movement in buildings.

Principles and practice for pool safety and heating/pumping provisions.

The roles and the relationship between building owners/occupiers, developers and building surveyors in the operation and maintenance of buildings.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BLDG 7004 Building in Bushfire Prone Areas

Credit Points 10

Legacy Code 200458

Coordinator Grahame Douglas (<https://directory.westernsydney.edu.au/search/name/GrahameDouglas/>)

Description This unit describes the basis for the design and construction of buildings to withstand bushfire attack, the measures that can be incorporated into building design to achieve this and the legislative building requirements affecting bushfire environments. The unit examines the mechanisms of bushfire attack on structures, the role of landscaping on building survival and how materials perform in the presence of a bushfire event. The unit describes the role of the Building Code of Australia (BCA) and Australian Standards in the construction of various building types and the legislative and regulatory environment in which this operates.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain the building legislation for various buildings in bushfire prone areas;
2. Discuss the relationship between bushfire attack and building performance;
3. Describe the role of landscaping in propagating bushfire in the urban interface environment;
4. Describe the various design options available to improve building survivability during a bushfire; and
5. Review the options available for construction of buildings so as to comply with building legislation, particularly with respect to the role of Australian Standards.

Subject Content

Overview of architectural issues for the building envelope;
 Ignition of buildings in bushfires - the mechanisms operating (bushfire attack);
 Design options for improved building performance;
 Upgrading existing buildings;
 Building Code of Australia deemed to satisfy and performance requirements;
 Australian Standard for construction in bushfire prone areas - AS 3959;
 Maintenance of building envelope for bushfire performance
 Landscaping for bushfire prone areas

Assessment

BLDG 7005 Egress and Risk Assessment

Credit Points 10

Legacy Code 300717

Coordinator Won Hee Kang ([https://directory.westernsydney.edu.au/search/name/Won Hee Kang/](https://directory.westernsydney.edu.au/search/name/Won%20Hee%20Kang/))

Description This unit introduces the concept of risk assessment for fire safety systems relevant to life safety and property protection. The unit helps students develop an understanding of building occupant characteristics and human behaviour during fire emergencies. Parameters, methods and criteria for risk and economic assessments are covered in this unit.

School Eng, Design & Built Env

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 5424 - Fire Safety Systems 1 (Property)

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

This subject assumes that the student has undertaken study in building construction, building surveying, engineering, science, architecture or a related area or has gained the equivalent knowledge by working in the construction industry in an appropriate capacity for at least four years.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. explain the concept of qualitative and quantitative risk in terms of life safety and property protection;
2. categorise risk parameters and establish risk assessment criteria

- characterise human behaviour in fire emergencies and its implications in egress analysis and fire safety engineering assessment
- apply the knowledge and skills to solve specific problems and to conduct quantitative risk assessment and develop risk management strategies.

Subject Content

Introduction to risk concepts
 Risk audits and inspections
 Reliability in fire safety engineering
 Fire Risk Ranking
 Risk analysis
 Occupants and detection of fires
 Human Behaviour in fires
 Occupant movement and egress
 Occupants and untenability
 Cost benefit analysis
 Treatment of risks and risk management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Assignment 1. Essay and analytical	1,500 equivalent, individual	25	N	Individual
Assignment 2. Essay and analytical.	1,500 equivalent, individual	25	N	Individual
Assignment 3. Essay and analytical	1,500 equivalent, individual	25	N	Individual
Assignment 4. Essay and analytical.	1,500 equivalent, individual	25	N	Individual

BLDG 7006 Financing Cities in the Global Economy

Credit Points 10

Legacy Code 101315

Coordinator Phillip O'Neill ([https://directory.westernsydney.edu.au/search/name/Phillip O'Neill/](https://directory.westernsydney.edu.au/search/name/Phillip%20ONeill/))

Description Financing infrastructure to keep cities running and growing at a time when governments face new financial constraints is a key

challenge for urban managers. In order to be able to contribute to the debate about financing cities it is important for future urban managers to develop a basic financial literacy, understand and draw on the options for financing essential urban functions in Australia cities and elsewhere, and assess the tensions involved in public and private financing pathways. This unit addresses these needs through both theoretical and practical approaches to the city as a set of flows within a wider urban network of relations. Students develop their understanding via interactive lectures, case studies, fieldwork exercises and assignments.

School Social Sciences

Discipline Building Construction Management

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

- Demonstrate financial literacy including knowledge of the makeup of public sector accounts at the scale of the city.
- Examine the basic elements of infrastructure funding in the context of a city as a set of flows.
- Synthesise analyses of infrastructure, economic functions and flows, employing relevant technical tools for data collection, analysis and mapping.
- Critically evaluate and assess financial management of cities using efficiency, effectiveness and equity criteria.
- Use efficiency, effectiveness and equity criteria to devise resolutions to the tensions in public and private options for the operation and control of urban functions.

Subject Content

The city as a set of flows
 The city as a set of financial flows
 Financing options in Australia and overseas
 Models for evaluating financing options
 The nature of public and private involvement in urban services and their financing
 The construction of integrated models for financing cities

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BLDG 7007 Interpreting Building Regulations (Residential Buildings)

Credit Points 10

Legacy Code 301103

Coordinator Payam Rahnamayiezekavat (<https://directory.westernsydney.edu.au/search/name/PayamRahnamayiezekavat/>)

Description The basis of this unit is to ensure students become accustomed to reading and interpreting laws that specifically relate to building legislation. The unit provides students with an introduction to and sound working knowledge of the prescriptive provisions of the National Construction Code (BCA) Volume 1 & 2, associated Standards, codes and statutory interpretation as it applies to residential buildings. This unit will develop a sound knowledge of the National Construction Code (BCA) - Volume 2 and an introduction to rise in storeys, types of construction and the fire requirement for building elements in the National Construction Code (BCA) Vol. 1, Building Profession Act 2005 and other associated legislation. Residential building work includes work under the Home Building Act 1989, which involves the construction of a dwelling, and alterations or additions to a dwelling. It also will relate to repairing, renovating, decorating or applying protective treatment to a dwelling. The unit applies to residential buildings and associated structures and includes the evaluation and interpretation of performance requirements, classification of buildings according to National Construction Code (BCA) criteria, limitations of the referenced documents (National Construction Code (BCA) - Volume 2) and strategies for compliance. Students will need to relate the objectives of the National Construction Code (BCA) and the purpose of its respective provisions in relation to construction of residential buildings and the evaluation of associated documentation.

School Eng, Design & Built Env

Discipline Building Surveying

Student Contribution Band HECS Band 2 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in the Master of Building Surveying, Graduate Diploma in Building Surveying, Graduate Certificate in Building Surveying, Master of Bushfire Protection, Graduate Diploma in Bushfire Protection, Graduate Certificate in Bushfire Protection, Master of Project Management, Graduate Diploma in Project Management or Master of Architecture (Urban Transformation) .

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define the rules of interpretation as they apply to residential buildings.
2. Identify and apply deemed to satisfy (DTS) provisions in the National Construction Code (BCA) applicable to residential buildings.
3. Determine and define classification of buildings and the interpretation for multiple classifications within a building.
4. Analyse building solutions to ensure compliance with performance requirements and DTS provisions of National Construction Code (BCA).
5. Interpret relevant Standards adopted by building regulation and the limitations of their interpretation..
6. Interpret construction methods to comply with the intent of the National Construction Code (BCA).

Subject Content

Interpretation to residential buildings

National Construction Code (BCA) objectives and deemed to satisfy (DTS) provisions

Alternative National Construction Code (BCA) solutions

Regulative requirements to residential buildings

Alternative performance solutions or DTS provisions of National Construction Code (BCA)

Australian Standards and legislation

Compliance with the National Construction Code (BCA) and associated

Australian Standards

BLDG 7008 Professional Practice and Building Law

Credit Points 10

Legacy Code 301104

Coordinator Payam Rahnamayiezekavat (<https://directory.westernsydney.edu.au/search/name/PayamRahnamayiezekavat/>)

Description The basis of this unit is to ensure students become accustomed to reading and interpreting building and related laws. The unit provides students with background knowledge of the negligence, administrative law, life safety, proportional liability, contracts and statutory interpretation as it applies to architecture, building surveying, fire engineering and bushfire protection. The unit studies the codes of professional conduct, ethics, conflict of interest and the rules of evidence within the legal constraints when acting as certifiers and or experts. The jurisdictional requirements for certification are considered and assessed. These professions can act as expert witnesses and consequently need to understand codes of professional conduct, ethics, conflict of interest and the rules of providing expert evidence. In doing so, they are potentially required to brief solicitors or other legal professionals and will ultimately have a duty to the court or tribunal.

Project Procurement Systems

Credit Points 10

Legacy Code 301191

Coordinator Xiaohua Jin (<https://directory.westernsydney.edu.au/search/name/XiaohuaJin/>)

Description This unit examines contemporary practice in relation to procurement strategies such as traditional procurement, relational contracting, strategic project alliancing, and public-private partnerships / private finance initiatives within project environments. The unit will challenge students to examine built environment business ecologies which underpin strategic procurement decision making. Unique procurement environments will be explored, allowing the students to examine key themes of procurement management.

BLDG 7011 Work-Integrated Learning in Project Management A

Credit Points 20

Legacy Code 301366

Coordinator Ali Al-Ashwal ([https://directory.westernsydney.edu.au/search/name/Ali Al-Ashwal/](https://directory.westernsydney.edu.au/search/name/Ali%20Al-Ashwal/))

Description This work integrated learning unit will provide students enrolled in the Master of Project Management with an opportunity to undertake work placement focusing on project management (PM) in a professional organisation within an industry relevant to students' specialisation or generic option. The placement will allow students to observe and develop PM professional skills and behaviour, integrate theoretical and practical PM knowledge and conventions into a real world setting, and establish project management competency, all in line with recognised world standard in project management. This unit aims to promote greater engagement with career planning and progression and hence improve job readiness.

Incompatible Subjects INFO 7010 - Research Project A INFO 7011 - Research Project B

Restrictions

Students must be enrolled in program 3752- Master of Project Management and must have successfully completed 80 credit points

Assumed Knowledge

Foundational knowledge of project management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Clearly justify your role and responsibilities in the workplace for a minimum of 500 hours in both Work-Integrated Learning units based on recognised world standards in project management and workplace health and safety requirements.
2. Holistically examine and reflect on how the project management knowledge is applied in the workplace, through your own observations and implementation.
3. Successfully develop project management competencies in line with recognised world standard in project management.
4. Constructively contribute to the project management-related work of the workplace.
5. Explain in detail how the work placement has contributed towards your career planning and job readiness in the project management sector.

Subject Content

1. 250 hours work placement at an approved organisation within an industry relevant to students' individual specialisation under the guidance of an approved workplace supervisor and an academic supervisor of WSU

2. Integration of project management knowledge and skills with real world applications in line with recognised world standard in project management.
3. Reflection on project management knowledge and skills in line with recognised world standard in project management.
4. Achievement of project management competencies identified in recognised world standard in project management.

Special Requirements

Legislative pre-requisites

All students will be required to conduct Work Health and Safety Risk Assessment for the tasks they may carry out in their workplace. Depending on the nature of the organisation in which they are doing their placement there may be special legislative requirements. These must be identified by the students before commencement of placement. The placement will not proceed if the student does not have the correct requirements at the time the placement is due to begin.

BUSM 0004 Business Ethics (WSTC Prep)

Credit Points 5

Legacy Code 700215

Coordinator Vlad Krajsic ([https://directory.westernsydney.edu.au/search/name/Vlad Krajsic/](https://directory.westernsydney.edu.au/search/name/Vlad%20Krajsic/))

Description Business Ethics seeks to give students an understanding of the concept of ethics in general, the role ethical thinking and behaviour plays in the contemporary business environment and the importance of critical and analytical thinking. Through an examination of the historical development of ethics and the most recognised ethical approaches, students will develop skills in responding to ethical questions and the use of applied ethics. Students will also be given the opportunity to develop skills in relation to selecting and evaluating sources and materials when preparing tasks and critical and analytical thinking.

BUSM 0027 Management Fundamentals

Credit Points 10

Legacy Code 201032

Coordinator Pauline Ross ([https://directory.westernsydney.edu.au/search/name/Pauline Ross/](https://directory.westernsydney.edu.au/search/name/Pauline%20Ross/))

Description This subject introduces students to the fundamentals of management which will prepare students for postgraduate business studies. Students will learn to identify operational systems and structures that underpin organisational design, decision-making and change within a variety of contexts. Students who successfully pass this subject, will have achieved some of the required assessments needed to satisfy English entry requirements (IELTS 6.5) to postgraduate Business study at Western Sydney University. A consideration of contemporary issues such as sustainability, social responsibility, and leadership will enable students to build their skills in organisational analysis, corporate problem-solving and human resource management.

School Business

BUSM 0028 Communications for Business

Credit Points 10

Legacy Code 201033

Coordinator Jess Richards ([https://directory.westernsydney.edu.au/search/name/Jess Richards/](https://directory.westernsydney.edu.au/search/name/Jess%20Richards/))

Description This subject develops verbal and written communication skills within a business context. It enables students to hone their language skills in academic writing, reading, listening and speaking to a high level. Students who successfully pass this subject, will have achieved some of the required assessments needed to satisfy English entry requirements (IELTS 6.5) to postgraduate Business study at Western Sydney University. Students will undertake tests in reading, writing and listening as well as assessment tasks which include writing research reports and essays. Students will learn the

underlying principles of academic research and writing in preparation for postgraduate study.

School Business

Discipline Business And Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 0 Preparatory subject

Restrictions

Students must be enrolled in 2845 Masters Qualifying Program with Business English.

Learning Outcomes

1. Identify the importance of communication in professional business contexts.
2. Apply academic research and writing skills in a scholarly context.
3. Communicate effectively using written skills that are suited to audience and context.
4. Communicate effectively using verbal skills that are suited to audience and context.
5. Demonstrate English language skills in the key IELTS test areas: writing, speaking, listening and reading
6. Demonstrate general English ability in grammar, vocabulary and functional language

Subject Content

1. Introduction to effective business communication
2. Written communication in a professional context
3. Verbal communication in a professional context
4. Academic writing and research skills
5. Non-verbal and intercultural communication
6. Ethics in business communication

BUSM 0029 Decision Making for Business (WSTC Prep)

Credit Points 10

Legacy Code 700322

Coordinator Abdullah Al Abed ([https://directory.westernsydney.edu.au/search/name/Abdullah Al Abed/](https://directory.westernsydney.edu.au/search/name/Abdullah%20Al%20Abed/))

Description The world of business is a complex one, where decisions can have a major impact on a firm's success or failure. So how do you make a good business decision? In this unit students will explore the value of numerical data as a tool to help businesspeople make informed decisions using sound evidence. We start with the basics of quantitative data - statistics - as a way of calculating the probable outcomes of particular decisions. We then explore how another

crucial set of numbers for a firm - the financials - can also empower businesspeople to make smart decisions.

School Western Sydney The College

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 0 Preparatory subject

Restrictions Students must be enrolled at Western Sydney, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Collect, organise and display quantitative data.
2. Use basic statistics to justify a decision.
3. Use basic accounting information from financial statements to justify a decision.
4. Use spreadsheet software to analyse and manipulate data to help make a decision.

Subject Content

- Basic business mathematics
- Methods of collecting, organising and displaying data
- Descriptive statistics: measures of central tendency and variability
- Probability theory and its applications for business
- Recording and reporting economic activity for a firm
- Preparation of the statements of profit or loss and financial position
- Financial statements in decision-making

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

HSC English or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse assessment tasks to determine requirements and appropriate composition and response;

2. Undertake library searches and evaluate business and economics literature with regard to explicit and implicit assumptions, logic of arguments and appropriateness;
3. Organise and analyse information to develop a position and supporting arguments;
4. Prepare written texts which are well structured, cohesive and appropriately cited;
5. Identify issues of integrity and ethical practices in academic and business contexts.

Subject Content

- academic integrity and ethics
- academic essays
- Researching and referencing
- reading and Evaluating sources
- note-taking and organising information
- Constructing A thesis
- developing, supporting and documenting An argument
- Paragraphs and sentences
- Coherence and voice
- introductions and conclusions
- Proofreading and editing

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task

BUSM 1005 Developing Effective Performance at Work

Credit Points 20

Legacy Code 200880

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description This online unit in the Bachelor of Business Administration enables students to put work experience to practical use in the academic study of business and management. It provides an introduction to work-based learning and helps students to develop the study skills needed in higher education. This unit aims to develop skills to improve performance at work - and as such is quite different from many other units that are designed around a particular subject. In contrast, this unit provides an opportunity to make decisions about what to learn to improve performance in the workplace.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 1 subject

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Western Sydney Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss work based learning;
2. Design work-based learning projects;
3. Reflect on their own work based learning;
4. Evaluate experiences and make decisions upon future actions;
5. Plan and manage work based learning through the use of work-based learning contracts;
6. Effectively communicate learning within chosen work-based learning topics;
7. Apply relevant knowledge to analyse a work based issue or problem;
8. Engage critically with a range of problems and issues in the workplace in order to provide solutions/outcomes.

Subject Content

- Working life
- work and work based learning
- learning skills from work to Study
- writing skills and reading skills
- The management of learning
- learning contracts
- work based Issues and problems for investigation
- The process of reflection for work based learning
- work based learning and The methods for Critical appraisal

BUSM 1008 Enterprise Leadership

Credit Points 10

Legacy Code 200912

Coordinator Ayda Succarie ([https://directory.westernsydney.edu.au/search/name/Ayda Succarie/](https://directory.westernsydney.edu.au/search/name/Ayda%20Succarie/))

Description Enterprise Leadership begins the development of the understanding of the role and function of business management and enterprise leadership concepts. Enterprise leaders need to balance a range of stakeholder perspectives in dynamic internal and external environments at local and global levels. Students are introduced to people, managerial and organisational processes designed to achieve enterprise leadership. Problem solving scenarios and experiential learning provide students with a foundation to develop personal and professional skills required to effectively manage their careers.

BUSM 1009 Enterprise Leadership (WSTC)

Credit Points 10

Legacy Code 700252

Coordinator Bader Unnisa Mehdi (https://directory.westernsydney.edu.au/search/name/Bader_Unnisa_Mehdi/)

Description Enterprise Leadership begins the development of the understanding of the role and function of business management and enterprise leadership concepts. Enterprise leaders need to balance a range of stakeholder perspectives in dynamic internal and external environments at local and global levels. Students are introduced to people, managerial and organisational processes designed to achieve enterprise leadership. Problem solving scenarios and experiential learning allow students to develop personal and professional skills required to effectively manage their careers.

BUSM 1010 Financing Enterprises

Credit Points 10

Legacy Code 200910

Coordinator Walid Bakry (<https://directory.westernsydney.edu.au/search/name/Walid Bakry/>)

Description Financing an enterprise plays an important role in ensuring its survival. Financing Enterprises focuses on the different types of enterprises available to start a business, financial statements issued by enterprises, key sources of finance available to small and large businesses, and how the surrounding financial and macroeconomic environments affect an enterprises performance. Participants in the unit will learn how to identify, analyse and interpret financial information using industry related database. The unit utilises problem solving and case studies so participants can understand the real world significance of finance. Successful completion of the unit equips participants with key concepts involved in financing enterprises.

BUSM 1012 Foundations of Entrepreneurship

Credit Points 10

Legacy Code 200979

Coordinator Claire Lewin ([https://directory.westernsydney.edu.au/search/name/Claire Lewin/](https://directory.westernsydney.edu.au/search/name/Claire%20Lewin/))

Description This unit introduces students to the necessary foundations for starting a business and entrepreneurship. Students will be introduced to the Australian business environment and key principles for setting up an entrepreneurial and competitive Business within that environment. Students will be exposed to theories and frameworks on entrepreneurship, entrepreneurial processes, and new and emerging entrepreneurship issues. Students will apply knowledge gained through completing a Business Model Canvass (BMC) case study of a real start-up company or completing a BMC of their own entrepreneurial venture (for students already undertaking an entrepreneurial project).

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify key requirements for setting up a small business in the Australian business environment;
2. Identify key processes for setting up a small business;
3. Apply knowledge on entrepreneurship frameworks and processes through analysing a real-life start-up company;
4. Demonstrate ability to write succinctly and clearly in a manner that appeals to a wide audience;
5. Demonstrate ability to verbally communicate clearly and effectively to a wide audience.

Subject Content

The 21st century entrepreneur in an Australian business environment
 Entrepreneurship: Introduction to theory and practice
 Entrepreneurship in practice: Creativity and innovation
 Entrepreneurial opportunities, Innovation and the draft business plan
 Entrepreneurial financing
 Managing entrepreneurial functions
 Legal and ethical aspects of entrepreneurship

Entrepreneurship, small business management and developing the business

Entrepreneurship in society: Corporate, social, indigenous and family

BUSM 1013 Global Supply Chain Management

Credit Points 10

Legacy Code 200677

Coordinator Stephen Waters ([https://directory.westernsydney.edu.au/search/name/Stephen Waters/](https://directory.westernsydney.edu.au/search/name/Stephen%20Waters/))

Description This contemporary unit focuses on the importance of supply chain management in the success and profitability of organisations. Supply chain management is defined theoretically and practically, with critical issues in designing a global supply chain network discussed. Several case studies enabling students to understand issues within supply chain management are discussed throughout, covering areas such as collaboration, transport, warehousing and the various relationships within the supply chain.

BUSM 1014 Introduction to Business Studies

Credit Points 20

Legacy Code 200879

Coordinator Louise Ingersoll ([https://directory.westernsydney.edu.au/search/name/Louise Ingersoll/](https://directory.westernsydney.edu.au/search/name/Louise%20Ingersoll/))

Description This online unit is the first in the degree in business administration and is the introductory unit in business studies. It explores the question 'What is a business?' and investigates the business functions of human resource management, accounting and finance, and marketing. Different internal and external elements of a business are introduced, and the context in which a business operates is explained. Students will explore the common aims and characteristics of business - investigating what makes them different. Business structures, cultures and functions are identified and the political, social, economic, technological and ethical considerations affecting business are introduced.

School Business

Discipline Business And Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 1 subject

Incompatible Subjects BUSM 1038 Management Dynamics

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any UWS Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. demonstrate their knowledge and understanding of the nature and purpose of business organisations

2. discuss key concepts relating to business functioning, survival and success
3. identify the role of HR, Accounting, Finance and Marketing in business organisations
4. analyse established ideas, concepts and techniques of leadership and management and apply this knowledge to examine problems
5. communicate information, ideas and arguments effectively using appropriate styles and language, to specialist and non-specialist audiences
6. read and interpret information presented in a variety of forms and perform relevant tasks of analysis and evaluation
7. develop the ability to reflect on theory and to use specific business knowledge to enhance work/practice

Subject Content

What is business?

The structure, culture and role of business organisations, the complex dynamics of organisational environments and how organisations understand and interact with their environments

An introduction to human resource management in business

An introduction to accounting and finance in business

An introduction to marketing in business

The different ways of looking at business

Teaching Periods

BUSM 1015 Introduction to International Business

Credit Points 10

Legacy Code 200591

Coordinator Felicitas Evangelista ([https://directory.westernsydney.edu.au/search/name/Felicitas Evangelista/](https://directory.westernsydney.edu.au/search/name/Felicitas%20Evangelista/))

Description This unit introduces students to the nature of international business operations in the world economy. The first part focuses on the basic concepts and theories of international trade, investment, and foreign exchange which form the foundation of a firm's international business activities. The second part is devoted to the economic, cultural, political and ethical environments and their effects on a firm's international business operations. The third and last part provides an overview of how the functional areas of business i.e. Marketing, production, human resource and finance are conducted in and affected by the multifaceted environment of an internationally oriented firm.

School Business

Discipline International Business

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects LGYA 9780 - International Business and Asian Environment

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appreciate the nature of international business and understand how it differs from domestic business operations;
2. Apply essential concepts and theories of international business;
3. Recognise the pertinent economic, cultural, political and ethical dimensions of a company's international business activities;

4. Demonstrate the ability to identify and address common problems faced by an internationally oriented firm;
5. Demonstrate adequate communication and interpersonal skills to provide and respond to feedback about international business issues.

Subject Content

- globalisation and Internationalisation
- theories of trade and investment
- foreign exchange and finance
- cultural differences
- political and legal environments
- economic environment
- ethics and corporate responsibility
- international business strategy
- international Marketing
- international production, outsourcing and Logistics
- international human resource management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Case Study	20 minutes/1,500 words	20	N	Group
Participation	20 minutes per case	10	N	Individual
Quiz	10-15 multiple choice questions x 3	20	N	Individual
Final Exam	2 hours	50	Y	Individual

BUSM 1019 Management Foundations

Credit Points 10

Legacy Code MG102A

Coordinator Ian Caddy ([https://directory.westernsydney.edu.au/search/name/Ian Caddy/](https://directory.westernsydney.edu.au/search/name/Ian%20Caddy/))

Description 'Management Foundations' provides an opportunity for students to understand the linkage between organisational processes and managerial practices. The aim of the unit is to identify the dynamic nature of managerial practice in changing social, economic, technological and global environments. The unit investigates management theory, roles, and managerial skills and addresses the ongoing needs of decision making, quality management and worksite safety management. This unit is offered specifically to the School of Computing, Engineering and Mathematics and the School of Social Sciences and Psychology.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Incompatible Subjects BUSM 1038 - Management Dynamics

Restrictions Students must be enrolled in the degrees offered by the Schools of: Computing, Engineering and Mathematics; Social Sciences and Psychology; Humanities and Communication Arts; and Education.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the complex nature of organisations and management.
2. Analyse the environments of organisations by identifying the dynamic nature of managerial practice in changing social, economic, technological and global environments.
3. Assess the relationship of organisations with their stakeholders in the context of social responsibility and managerial ethics.
4. Evaluate decision-making models and processes and the effect of risk on decision making.
5. Evaluate planning processes and systems and how organisational planning is affected by environmental uncertainty.
6. Examine the integrative organisational role of management in the context of strategic leadership.
7. Examine professional standards of workplace behaviour and communication.

Subject Content

Introduction to the dynamic nature of management as a contingent and complex endeavour.

Environmental analysis of organisations and managerial practice in sustainable social, economic and technological environments and in the global context.

Organisations and managerial practice from the stakeholder perspective: social responsibility and managerial ethics. Decision-making and risk.

Quality management.

Work Health and Safety.

Organisational planning and environmental uncertainty.

Strategic organisational leadership: leadership capability.

Strategic organisational leadership: groups and teams.

Strategic organisational leadership: communications and interpersonal skills.

Professional standards in workplace behaviour and communications.

Prescribed Texts

BUSM 1021 Management Practice

Credit Points 20

Legacy Code 200890

Coordinator Louise Ingersoll ([https://directory.westernsydney.edu.au/search/name/Louise Ingersoll/](https://directory.westernsydney.edu.au/search/name/Louise%20Ingersoll/))

Description This online unit introduces management ideas and uses activities to build on the students' existing knowledge and skills through the application of management theory. The unit will develop an understanding of management practice in the wider context of organisations. Students will critically evaluate their workplace context in relation to management practice and review their knowledge and skills. The unit is suitable for anyone who has undertaken workplace learning in the last three years and wants to develop an academic understanding of management disciplines such as operations, marketing, strategy, and their own management practice.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 1 subject

Incompatible Subjects BUSM 1038 Management of Dynamics

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any UWS Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate how learning they have undertaken previously in the workplace can be utilised to inform the development of their management practice
2. Select and used a range of management theories, concepts and ideas to help identify, analyse and address issues and situations in their current practice setting.

3. Work in collaboration with others in assessing the applicability of selected management theories, etc. to their own and others identified practice problems
4. Reflect on the impact of their learning on their practice of management, and their future development as a management practitioner.
5. Identify and draw upon appropriate forms of prior learning relating to the development of their management practice.
6. Apply relevant theoretical knowledge of management to a practical problem
7. Collaborate with peers practitioners to, and begin to, critically evaluate the applicability of selected management theories etc.
8. Work independently on identifying issues and situations in the workplace and apply academic theories and concepts to these to gain a deeper understanding of them.
9. Use of a range of tools and websites for finding and recording information online: internet browsers, search engines, copy/ paste, e-portfolios and download functions
10. Communicate with peer learners via synchronous and asynchronous online media
11. Manage and organise their own time to meet module assessment deadlines
12. Demonstrate an awareness of their own skills and abilities in relation to the requirements of their own practice role

Subject Content

1. Using academic theory in the workplace
2. The role of the manager
3. Making sense of your organisation (Strategy)
4. Leadership and Management
5. Managing Resources: People
6. Managing Resources: Finance
7. Managing Processes
8. Planning (incl. Projects)
9. Connecting with your customers (Marketing)
10. Workplace Practice

BUSM 1023 Managing People at Work

Credit Points 10

Legacy Code 200300

Coordinator Sheree Gregory ([https://directory.westernsydney.edu.au/search/name/Sheree Gregory/](https://directory.westernsydney.edu.au/search/name/Sheree%20Gregory/))

Description 'Managing People at Work' provides an introductory framework for the study of employment relations. The unit is approached from a stakeholder perspective, emphasising the way that management, labour and the State, along with other key stakeholders, act, both separately and together, to structure the employment relationship. In doing so, the unit integrates industrial relations and human resource management theory and practice, illustrating the links between the two disciplines. The content of the unit is structured so as to provide an initial introduction to the disciplines of industrial relations, human resource management, and employment relations, and to the key stakeholders in the employment relationship. Building on this framework, a theoretical and empirical analysis of employment relations processes is provided, with particular emphasis given to recent changes in the role and perspectives of stakeholders.

Coordinator Bader Unnisa Mehdi ([https://directory.westernsydney.edu.au/search/name/Bader Unnisa Mehdi/](https://directory.westernsydney.edu.au/search/name/Bader%20Unnisa%20Mehdi/))

Description Organisational Behaviour examines individual, group and organisational behaviours and the influence these have on each other. This unit is based on developing skills that can help students navigate through these processes and behaviours. The focus is on participation, to guide students to both reflect on and develop their own skills to become better managers, as well as employees.

School Business

Discipline Organisation Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BUSM 1026 Organisational Behaviour

Restrictions Students must be enrolled at Western Sydney University, The College. Students enrolled in extended diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply skills in workplace communication.
2. Apply skills in teamwork.
3. Analyse and reflect on how individual and group processes affect behaviour in organisations.
4. Apply theory, research and practice in organisational behaviour.
5. Reflect on how ethical issues may affect reputation and productivity.

Subject Content

Reflective and critical thinking.
 Exploring and developing personal strengths.
 Developing communication skills.
 Rational versus irrational decision making?
 Team processes and skills.
 Motivation or disengagement?
 Developing your personal and organisational credibility.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Reflection	400 words	10	N	Individual
Report	1,200 words	25	N	Individual
Presentation	a) Part 1: Group presentation (10-15 minutes) (15%), Group b) Part 2: Individual reflection on group dynamics. (400 words) (10%), Individual	25	N	Both (Individual & Group)
Final Exam	2 hours	40	N	Individual

BUSM 1028 Professional Communication Skills for Business

Credit Points 20

Legacy Code 200878

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description This online unit is for Bachelor of Business Administration students to develop specialised reading and writing skills for business study purposes. Students will study a range of business related material that have been especially designed to develop knowledge and reading and writing skills. Topics include areas of human resource management; finance and accounting; marketing and a number of business analysis methods. Some of the study materials are authentic texts from the business world, others have been adapted or designed for the unit. Different styles of writing from business studies and business are introduced. Through examining successful examples of student writing and work-related documents, and reflecting on what makes these texts successful, students will learn to analyse case studies and produce effective academic business documents.

School Business

Discipline Personal Management Training

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 1 subject

Incompatible Subjects BUSM 1001 Business Academic Skills

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse business case studies and other material about contemporary business practice;
2. Apply knowledge in the analysis of practical business problems and issues;
3. Respond to the needs of academic and workplace audiences;
4. Read and summarise written text materials for key points;
5. Communicate effectively in writing in a range of academic and workplace genres, showing recognition of audience and purpose;
6. Select data, information and ideas from different sources and present them in an appropriate fashion to support an argument;
7. Critically evaluate and improve communication skills;
8. Apply a critical perspective to your own and others' language use;
9. Analyse business cases and situ

Subject Content

- processes for Analysing business cases
- methods for academic and business writing
- techniques for producing influential documents
- approaches to language for different situations
- The processes of reflection and how it contributes to learning
- methodology solving business problems for producing business reports
- communication skills developed by studying language and The organisation of texts

BUSM 1037 Health Administration and Management

Credit Points 10

Legacy Code 401388

Coordinator David Lim ([https://directory.westernsydney.edu.au/search/name/David Lim/](https://directory.westernsydney.edu.au/search/name/David%20Lim/))

Description The health workplace is a complex and sophisticated environment that can be understood in many different ways and mean different things to different members of an organisation. Assumptions about organisational structure and action are based on conceptualisations and beliefs about the nature and goals of an organisation. This unit aims to develop an introductory understanding of health administration and management practice and business skills required in an evolving health landscape in concordance with the

international competency framework for health administrators and managers.

School Health Sciences

Discipline Public and Health Care Administration

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Incompatible Subjects BUSM 2020 - Health Services Management

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the fundamentals of organising, organisational design and culture in health care services;
2. Describe monitoring and control mechanisms for human and capital resources, risk management and safety;
3. Distinguish and use the fundamentals of leading and group dynamics in health care;
4. Apply management decision making practices used to ensure quality outcomes for both patients and staff in health services;
5. Analyse the strategic planning, strategic management, performance management and decision-making processes in the health care system.

Subject Content

1. Introduction to the profession of health administration and management
2. Introduction to the health and healthcare management environment
3. Introduction to business management skills (financial and resource management, human resource management, information management, organisational governance, planning and marketing, risk management and clinical governance, quality and safety, project and supply chain management)
4. Introduction to healthcare leadership

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy

in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and complete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- <http://training.gov.au> (<http://training.gov.au/>)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

BUSM 1040 Enterprise Leadership (Block)

Credit Points 10

Legacy Code 500077

Coordinator Rachel Renwick ([https://directory.westernsydney.edu.au/search/name/Rachel Renwick/](https://directory.westernsydney.edu.au/search/name/Rachel%20Renwick/))

Description Enterprise Leadership begins the development of the understanding of the role and function of business management and enterprise leadership concepts. Enterprise leaders need to balance a range of stakeholder perspectives in dynamic internal and external environments at local and global levels. Students are introduced to people, managerial and organisational processes designed to achieve enterprise leadership. Problem solving scenarios and experiential learning provide students with a foundation to develop personal and professional skills required to effectively manage their careers.

BUSM 1042 Introduction to Business Analytics

Credit Points 10

Legacy Code 201090

Coordinator Premaratne Samaranayake ([https://directory.westernsydney.edu.au/search/name/Premaratne Samaranayake/](https://directory.westernsydney.edu.au/search/name/Premaratne%20Samaranayake/))

Description The unit will introduce, explore and analyse key concepts and methodologies related to business analytics, analytics development and tools/techniques in broader business and organisational contexts. The ability to identify, collect, extract, analyse and visualise data is vital to organisations for developing strategies and making strategic/operational decisions. Business analytics uses a variety of tools and techniques using several systems/platforms to process and transform data into useful information and knowledge that can be used for evidence-based decision making at strategic, tactical and operational levels.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and classify business problems that require business intelligence from business analytics.
2. Apply business analytics development methodologies to business problems.
3. Recommend business analytics techniques, tools and methodologies in applied case scenarios.
4. Explain ethical and governance aspects of business analytics applications.
5. Evaluate the tools and techniques used in developing business analytics applications (e.g. dashboards) and performance reports.
6. Collaborate with team members in a productive manner supporting diverse viewpoints in relation to business analytics.

Subject Content

Overview of data, business analytics tools/techniques and organisation context

Working with big data to address management challenges

Data and Information for management decision making

Model Building for strategic planning

Visualisation and communication for a range of business stakeholders

Social network analysis

Business analytics development methodology

Design and agile thinking for business analytics projects

Ethical aspects, governance and security.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Case Study	2000 Words	40	N	Individual
Report	2500 Words	30	N	Group
Presentation	10 mins	20	N	Individual
Quiz	30 mins	10	N	Individual

BUSM 1043 Managing People at Work (Block)

Credit Points 10

Legacy Code 500080

Coordinator Rachel Renwick ([https://directory.westernsydney.edu.au/search/name/Rachel Renwick/](https://directory.westernsydney.edu.au/search/name/Rachel%20Renwick/))

Description 'Managing People at Work' provides an introductory framework for the study of employment relations. The unit is approached from a stakeholder perspective, emphasising the way that management, labour and the State, along with other key stakeholders, act, both separately and together, to structure the employment relationship. In doing so, the unit integrates industrial relations and human resource management theory and practice, illustrating the links between the two disciplines. The content of the unit is structured so as to provide an initial introduction to the disciplines of industrial relations, human resource management, and employment relations, and to the key stakeholders in the employment relationship. Building on this framework, a theoretical and empirical analysis of employment relations processes is provided, with particular emphasis given to recent changes in the role and perspectives of stakeholders.

School Business

Discipline Human Resource Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BUSM 1024 - Managing People at Work (UWSC)
LGYB 0478 - Managing People at Work (Creative Industries)

Restrictions Students must be enrolled in program 7180 - Undergraduate Certificate in Business Management

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the different approaches to the study and practice of employment relations.
2. Demonstrate recognition of the dynamics of industrial relations and human resource management both in the academic literature and in professional practice.
3. Identify internal and external stakeholders in the employment relationship and the goals and objectives of these stakeholders.
4. Analyse the way that these stakeholders act, together and separately, to shape employment relations processes.
5. Assess the complexity and dimensions of people management.

Subject Content

Exploring the complexity of managing people at work.

Work, organisation and stakeholders.

Determining, attracting and selecting human resources.

Developing and rewarding human resources.

Managing human resources.

Human resources in a changing world.

Building relationships at work.

BUSM 2001 Business Organisations and Their Environments A

Credit Points 20

Legacy Code 200882

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description This online unit introduces students to an examination of the environments in which business organisations operate. The unit adopts a practice-based learning approach, which means that students focus on how the ideas and issues discussed impact on organisations with which they are familiar. Students will begin by assessing their current knowledge and understanding of business organisations and then go on to explore how organisations we see today have been shaped. Drawing on individual experience of organisations as well as working collaboratively, students will develop a critical theoretical and practical understanding of the nature of business organisations and the internal and external factors that shape them.

School Business

Discipline Business And Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 2 subject

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Western Sydney Undergraduate program where

permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the diverse nature of business organisations and their relationships to their environments;
2. Describe systems thinking as a way of conceptualising a business in its environment;
3. Apply theories in order to understand organisations in their environments;
4. Explain the nature and drivers of change in business organisations and their environments;
5. Demonstrate an holistic understanding of how organisations operate and cope with the challenges from within and the external environment;
6. Demonstrate the ability to reflect on personal experience of organisations;
7. Collaborate effectively with other students;
8. Effectively communicate orally and in writing, information, arguments and ideas using language and styles appropriate for a business context and audience.

Subject Content

- Organisations in their environments
- introduction to systems thinking
- stakeholders of business Organisations
- information in business Organisations and The Importance of collaboration
- The evolution of Organisations
- organisational structure
- introduction to organisation theory
- national and organisational culture
- organisational change
- Technology, innovation and learning
- management and control
- The economics of Organisations and markets

Prescribed Texts

- On line materials will be supplied through vUWS.

Teaching Periods

BUSM 2002 Business Organisations and Their Environments B

Credit Points 20

Legacy Code 200884

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description This online unit extends the examination of the environments in which business organisations operate which was introduced in Business organisations and their environment A. The unit focuses initially on three sets of debates that are current in the world of business - globalisation, corporate social responsibility and regulation. Students are then asked to consider what organisations might look like in the future. Are newer organisational forms, such as open-source networks and social enterprises, just a transient phase or the start of a revolution in the operation of business? What are the implications of this for the world of work? Each topic will be approached through case study material and theoretical debates and

students will work collaboratively and individually to build skills and critical understanding.

School Business

Discipline Business And Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BUSM 2001

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Western Sydney Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the concept of globalisation and its economic, political and cultural dimensions;
2. Apply globalisation concepts to business case studies;
3. Demonstrate critical understanding of concepts of CSR;
4. Assess the role and effectiveness of regulation in the globalised business environment;
5. Analyse the ways in which the business environment of the future will impact on how people work together;
6. Explain the emergence of new business forms;
7. Analyse the impacts of new business forms on the way we think about business organisations and their purposes and values;
8. Apply learning to their own interactions with organisations and life experiences;
9. Effectively communicate orally and in writing, information, arguments and ideas using language and styles appropriate for a business context and audience.

Subject Content

- The context of Organisations
- globalisation
- corporate social responsibility
- regulation
- re-encountering Organisations
- new ways of Working
- new forms for Organisations
- values and business purpose
- new environments for Organisations ? fair trade and greenhouse gas emissions trading

Teaching Periods

BUSM 2004 Business, Society and Policy

Credit Points 10

Legacy Code 200158

Coordinator Qiuyan Fan ([https://directory.westernsydney.edu.au/search/name/Qiuyan Fan/](https://directory.westernsydney.edu.au/search/name/Qiuyan%20Fan/))

Description Business organisations influence and evolve through ongoing social, political and technological change. Taking the perspective that businesses both affect and are affected by government and society, the unit examines the complexities of interactions between three sectors: business, society and government. The unit emphasises the social responsibility of business. The different ideologies used to legitimise the actions of business, the responses from society and the role of government (local, transnational and global) in regulating interactions, are critically evaluated.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BUSM 2003 - Business Society and Policy (UWSC)

Restrictions

Successful completion of 30 credit points.

Note that only students enrolled at WSU Online or Sydney City Campus may register in the WSU Online or Sydney City Campus subjects offered at those locations.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the social and environmental impacts of business practices in national, transnational, cosmopolitan and global contexts;
2. Reflect on the links between personal experiences and social and environmental sustainability issues emerging from interactions between business, society and government;
3. Apply concepts from a range of theories and models to analyse interactions between business, society and government;
4. Identify and critique the ideologies used to justify the actions of business, government and society;
5. Explain the importance of business ethics and social responsibility for social and environmental sustainability;
6. Analyse social and environmental sustainability issues emerging from business activities in the context of economic, social and technological change and global interconnectedness.

Subject Content

- business, society and government as A complex, self-organising, dynamic and evolving system
- Complexity as A lens through which to make Sense of The interrelatedness and coevolution of business, society and government
- Understanding society
- sociological and Ethical reasoning about business Activities
- The development of capitalism from colonialism to A globally networked society
- Network based communication and Global Governance
- Stakeholder management theories
- Transnationalisation, cosmopolitanisation, globalisation and business responsibility
- ideological Models of economic regulations and social and business policies
- introduction to social inquiry
- businesses and environmental and social responsibility

BUSM 2005 Cost Benefit Analysis

Credit Points 10

Legacy Code 200924

Coordinator Neil Perry ([https://directory.westernsydney.edu.au/search/name/Neil Perry/](https://directory.westernsydney.edu.au/search/name/Neil%20Perry/))

Description Students will learn and apply Cost Benefit Analysis, the most commonly used economic tool in business, consultancy and government organisations. The unit is a core unit in the Economics major but is open to all students who have a basic understanding of economics and a desire to improve their analytical skills and employability. At the completion of the unit, students will be able to explain the economic foundations of cost-benefit analysis and they will have experience with analysing, critically evaluating and developing a cost-benefit analysis for a specific proposal. Students will also consider risk analysis and cost-effectiveness analysis.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BUSM 1006 OR
ECON 1011 OR
MKTG 1005

Assumed Knowledge

Basic understanding of economics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the welfare economics foundation to cost-benefit analysis.
2. Critically evaluate a cost-benefit analysis.
3. Conduct a cost-benefit analysis.
4. Distinguish between cost-benefit and cost-effectiveness analysis.
5. Explain the role of uncertainty and risk when evaluating proposals.

Subject Content

1. Conceptual and microeconomic foundations to cost-benefit analysis.
2. Steps in a cost-benefit analysis.
3. Valuing social benefits.

4. Evaluating indirect effects.
5. Opportunity costs, market and shadow prices.
6. Valuing non-market goods.
7. Discounting and the decision criteria.
8. Uncertainty and risk analysis.
9. Applications.
10. Cost-effectiveness analysis.

BUSM 2014 Enterprise Industrial Relations

Credit Points 10

Legacy Code 200614

Coordinator Terri Mylett ([https://directory.westernsydney.edu.au/search/name/Terri Mylett/](https://directory.westernsydney.edu.au/search/name/Terri%20Mylett/))

Description Enterprise Industrial Relations builds participants' analytical and research abilities, developing capacity to identify, diagnose and engage with industrial relations challenges from different stakeholder perspectives. Participants work with real-world industrial relations, looking at individual employees' workplace and labour market experiences; the goals and activities of managers; and the role and practices of tribunals, enforcement agencies, employer associations and trade unions. This is done through activities that require working collaboratively on problems using online research to investigate contemporary practice, such as the drivers behind enterprise agreements and the implications of institutional arrangements and trade unions for productivity, equity and human resource utilisation. It is a core unit for the human resource management undergraduate program.

School Business

Discipline Industrial Relations

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Pre-requisite(s) BUSM 1023

Equivalent Subjects BUSM 2015 - Enterprise Industrial Relations

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and utilise sources of qualitative and quantitative information and methods of research commonly used in professional industrial relations practice;
2. Apply theory to explain the drivers behind industrial relations patterns and outcomes, such as the impact of the nature of work, the legal context, the labour market and the goals of human resource management;
3. Describe Australia's current industrial relations institutions and processes relative to arrangements in the recent past and alternatives advocated by key stakeholders;
4. Explain the implications of the industrial relations framework and practices for

Subject Content

- role of industrial relations specialists
- rule-making: statutes, awards and enterprise agreements
- industrial relations in different contexts
- The state: role, processes
- management and The organisation of work: HRM goals and The labour process
- Employer associations: goals, role, methods
- trade unions: emergence, goals, role, Structures, methods
- contemporary trade union Issues and strategy
- industrial Law and tribunals
- Dispute Resolution and compliance and enforcement
- work health and safety, workers compensation and return-to-work imperatives for enterprises

BUSM 2016 Entrepreneurial Management and Innovation

Credit Points 10

Legacy Code 200154

Coordinator Dilupa Nakandala ([https://directory.westernsydney.edu.au/search/name/Dilupa Nakandala/](https://directory.westernsydney.edu.au/search/name/Dilupa%20Nakandala/))

Description This unit examines the theory, practice and nature of entrepreneurship, as a virtual but often neglected and misunderstood mode of management. A basic premise underlying this unit is that all business entities require enterprising management to enhance their survival ability. This proposition is relevant to new and older, small and large organisations. Additionally, contemporary management practice requires the modern manager to be creative in a learning context and the ways in which these creative environments are reached through entrepreneurship are explored.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Co-requisite(s) BUSM 1038

Equivalent Subjects LGYB 0476 - Entrepreneurial Management and Innovation (UWSC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain how entrepreneurial activities affect organisation and their environment;
2. Offer a critique of entrepreneurship and innovation theories;
3. Relate knowledge of entrepreneurs and entrepreneurial activities to business opportunities ;
4. Complete and present a team business plan based on various sources of research;
5. Explain the concept of innovation and critically analyse issues surrounding the management of innovation;
6. Demonstrate an understanding of the importance of ethics and social responsibility in undertaking entrepreneurial and innovative activities;
7. Explain the relationship between entrepreneurship and innovation.

Subject Content

- Introducing Entrepreneurship
- The business plan (BP)
- what makes An entrepreneur?
- The entrepreneurial option
- The entrepreneurial process & business opportunity
- entrepreneurial organisation
- organisational entrepreneurs
- introduction to innovation
- managing innovation
- physical considerations for innovation
- how do I protect innovation?
- The relationship between knowledge and innovation
- Entrepreneurship & innovation

Coordinator David Lim ([https://directory.westernsydney.edu.au/search/name/David Lim/](https://directory.westernsydney.edu.au/search/name/David%20Lim/))

Description The health workplace is a complex and sophisticated environment that can be understood in many different ways and mean different things to different members of an organisation. Assumptions about organisational structure and action are based on conceptualisations and beliefs about the nature and goals of an organisation. This unit aims to develop an introductory understanding of health administration and management practice and business skills required in an evolving health landscape in concordance with the international competency framework for health administrators and managers.

School Health Sciences

Discipline Public and Health Care Administration

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Co-requisite(s) Students enrolled in 3711 Bachelor of Information and Communications Technology (Health Information Management) must have completed or be enrolled in INFS 3010 Healthcare Data Environments

Equivalent Subjects BUSM 2021 - Health Services Management (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the fundamentals of organising, organisational design and culture in health care services.
2. Articulate basic health management skills in monitoring and controlling human and capital resources, risk management and work safety.
3. Distinguish and use the fundamentals of leading and group dynamics in health care.
4. Apply management decision making practices used to ensure quality outcomes for both patients and staff in health services.
5. Analyse the strategic planning, strategic management, performance management and decision-making processes of the health system in the current climate of reform.

Subject Content

1. Introduction to the profession of health management, historical perspectives, current competencies and employability skills.

2. The environment of management comparing public and private sector, managing diversity and change, quality management, ethics and social responsibility.
3. Fundamentals of organising and provision of services ? what and for whom are we managing?
4. Data used by managers.
5. Organisational design and culture.
6. Work design.
7. Introduction to human resource management and workforce planning.
8. Managerial decision making.
9. Fundamentals of planning and strategic management.
10. Risk management and workplace safety.
11. Fundamentals of controlling and leadership.
12. Current issues and concerns in health management.

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and complete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- <http://training.gov.au> (<http://training.gov.au/>)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Reflection	500 words	25	N	Individual
Critical Review: Comparative Analysis	1,000 words	35	N	Individual
Final Exam: Multiple Choice	120 minutes	40	N	Individual

Level Undergraduate Level 2 subject

Equivalent Subjects BUSM 2020 - Health Services Management

Restrictions Students must be enrolled at Western Sydney University The College and have completed the first semester of their Diploma, as this is a Level 2 subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop an understanding of the fundamentals of organisations, organisational design and culture within health care services.
2. Analyse the strategic planning, strategic management, performance management and decision-making processes of the health system.
3. Explore the fundamentals of leading, including an examination of leading through communication, group dynamics and teamwork in health care.
4. Explore and reflect on their values and understanding about the way work is organised.
5. Explore the implications of varying skill levels on organisational structure and action within health services.
6. Distinguish between the different levels and types of control affecting health care organisations.
7. Demonstrate a basic understanding of risk management and WHS.
8. Understand the significance of management to the processes that ensure quality outcomes for both patients and staff in health services.

Subject Content

1. Theoretical perspectives on health management.
2. Strategic management and strategic planning in health care.
3. Health managers and organisations.
4. Job design in health care.
5. Decision making strategies in health care.
6. Performance management in health care.
7. Fundamentals of leadership in health care.
8. Quality management in health.
9. Control strategies within health care organisations.
10. Introduction to risk management and WHS.

Assessment

BUSM 2022 Human Resource Development

Credit Points 10

Legacy Code 200859

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description 'Human Resource Development' (HRD) looks at how the development of people and their skills is essential to the 21st century workplace. By examining the key processes of employee learning, development and career management, participants will understand HRD's impacts on workers' employability and careers, organisational effectiveness and economic sustainability. The unit introduces concepts of workplace learning and engages participants in case study discussion and research into current HRD trends in Australian and international workplaces. The goal of Human Resource Development is to support participants to ask questions about current practice and to encourage critical understanding of the field.

Level Undergraduate Level 2 subject

Pre-requisite(s) BUSM 1023

Equivalent Subjects BUSM 2013 - Employee Training and Development
BUSM 2012 - Employee Training and Development

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse the goals, processes and impacts of HRD from a range of stakeholder perspectives.
2. Apply knowledge of training and development planning processes in case study analysis.
3. Analyse the ethical implications of the HRD function in the workplace.
4. Evaluate different models/theories of career management.
5. Communicate ideas in written and visual formats.

Subject Content

1. Key processes and concepts in HRD: training/learning; development and career management.
2. Role of the HRD professional ? workforce planning, succession planning, and building organisational capability.
3. Stakeholder perspectives on HRD.
4. Planning processes for learning and development ? needs analysis, program design and implementation, evaluation and HRD metrics.
5. Current issues and challenges for HRD in the Australian context.
6. Organisational strategies for developing employees ? talent management, coaching and mentoring.
7. Changing understandings of Careers in the 21st Century.

8. Current issues in career management.
9. Equity and diversity issues in HRD.
10. Ethical HRD.

BUSM 2024 Incubator 2: Start-up Essentials

Credit Points 10

Legacy Code 301206

Coordinator Anton Bogdanovych ([https://directory.westernsydney.edu.au/search/name/Anton Bogdanovych/](https://directory.westernsydney.edu.au/search/name/Anton%20Bogdanovych/))

Description There are unavoidable legal situations and ethical dilemmas in all professions. As an entrepreneur, facing these legal and ethical circumstances is much more formidable. This unit aims to prepare students to understand the legal and ethical landscape that applies to start-up (or any) organisation. As such, unit aims to cover the topics such as: creating a business plan, negotiating employment contracts, etc. The unit will be delivered through a number of modules. As an integral part of the unit, students are expected to engage and work in "start-up co-working space" on a regular basis. At the successful completion of this unit, students would have developed a thorough understanding of the local and international legal and ethical landscape within which modern start-up organisations operate. NOTE: This unit is offered at the Werrington Campus "Launch Pad".

School Computer, Data & Math Sciences

Discipline Business Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BUSM 2023 - Incubator 2 Legal and Ethical Setting of Entrepreneurship

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop a disruptive hypothesis for a business opportunity;
2. Develop multiple business model options using lean start-up tools;
3. Validate business models in the market using customer development and manual testing tactics;
4. Understand rapidly prototyping products to validate a customer solution; and
5. Adapt and create business models when core ideas are not validated in the market.

Subject Content

1. Business opportunity discovery, evaluation and exploitation in all phases of the start-up lifecycle (formation, growth, restructuring, succession)
2. Entrepreneurial thinking & lean approach
3. Lean principles
4. Idea validation
5. Commercialising business ideas

Assessment

BUSM 2027 Leadership, Influence and Change A

Credit Points 20

Legacy Code 200883

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description This online unit focuses on leadership and change practice, and has considerable potential to support employability. It is the first of two units on leadership, influence and change and lays the foundation for the evidence-based inquiry to be carried out in 200885 Leadership, influence and change B. Its strong work-based and reflective enquiry component will help students explore how to initiate and carry through improvements and projects to current work. Students will also develop skills to enable them to manage their learning in new work contexts. In this unit, the concept of 'work' is not limited to paid employment. However, for successful completion of this unit it will be very important to be involved in some ongoing project where students can influence others and initiate change.

School Business

Discipline Business And Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 2 subject

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Western Sydney Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and apply frameworks for reflective learning;
2. Demonstrate an understanding of relevant methods of workplace inquiry;
3. Demonstrate an understanding of the processes of leadership and how leadership becomes effective;
4. Explain the concept of influence and its impact in the workplace;
5. Identify change processes and the methods for generating change within the day-day operations of organisations or other work contexts;
6. Differentiate between different, and often conflicting, academic ideas in order to develop skills in practice of leading and initiating change;
7. Communicate ideas and research findings in an appropriately scholarly fashion;
8. Reflect on individual ability to introduce and manage change within their sphere of influence.

Subject Content

- Productive enquiry
- frameworks for reflective learning
- The phases of developing An evidence-based initiative
- methods of inquiry ? conversations and interviews, published materials and observations
- Qualitative and quantitative approaches to research
- Ethical inquiry
- Defining leadership
- effective leadership
- Constructing leadership and followership
- power and change
- The change environment
- linear modules and options for change
- implementing change
- reflecting on change

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Identifying an Evidence-Based Inquiry (EBI)	1,500 words	30	N	Individual
Reflective essay on Leadership and Change in Practice	2,000 words	30	N	Individual
Interim EBI report	2,500 words	40	N	Individual

BUSM 2028 Management of E-Business Processes

Credit Points 10

Legacy Code 200255

Coordinator Qiuyan Fan ([https://directory.westernsydney.edu.au/search/name/Qiuyan Fan/](https://directory.westernsydney.edu.au/search/name/Qiuyan%20Fan/))

Description The Internet and WWW have recast the role of e-business systems in organizations and the management of these systems. Many organizations use web-based technologies to bring about fundamental changes in the way they interact with their suppliers and customers. It is becoming increasingly important to digitally enable the core business processes of their organization. A vital factor for successful e-business organizations is their ability to manage their core business processes and information resources. This unit covers e-business planning, strategies for managing information, knowledge and business networks in e-business, and strategic management for e-business systems including their connection to enterprise resource planning (ERP) systems, supply chain management systems (SCM) as well as customer relationship management systems (CRM).

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects LGYA 4367 - Information Systems and Business Processes

Assumed Knowledge

Concepts and other issues covered in CP108A Principles of the Internet.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. understand the business challenges of introducing e-business and e-commerce to an organization
2. evaluate changes in business relationships between organizations and their customers enabled by e-commerce
3. explain how Internet technology facilitate management and coordination of internal business processes and supply chain management
4. describe how companies can benefit from conducting business electronically using Internet technology
5. apply tools and techniques to formulate e-business strategies
6. identify the benefits and risks of e-procurement
7. understand how to achieve marketing objectives through use of the various electronic communications technology
8. explain how CRM supports e-business strategies

Subject Content

- Overview of E-business and E-commerce management
- E-commerce microenvironment
- E-commerce macroenvironment
- managing E-business infrastructure
- E-business strategy: (A) situation analysis & objective setting
- E-business strategy: (b) strategy and tactics
- E-business applications: - Supply chain management; - E-procurement; - E-marketing; - e-CRM

BUSM 2029 Management of Projects

Credit Points 10

Legacy Code 200528

Coordinator George Rosier ([https://directory.westernsydney.edu.au/search/name/George Rosier/](https://directory.westernsydney.edu.au/search/name/George%20Rosier/))

Description Management of Projects introduces students to the role of projects in organizations and the associated issues in managing projects, including the management of project teams and project lifecycles. While project management is well understood in areas such as construction and information systems, this unit also covers its use in other business applications, such as product development, advertising and promotional campaigns, organizational change and the implementation of corporate strategy. The use of cases, simulations and other exercises allows students to gain a realistic appreciation of the issues involved in managing projects. A range of project management tools and techniques are demonstrated through these case studies.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects LGYA 9898 - Facilities Location and Project Management LGYA 9931 - Business Modelling

Assumed Knowledge

Students are expected to have gained an introductory level of knowledge in operations and supply chain management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the role of project management and project life cycles in organisations
2. Appreciate management activities associated with each stage of the life cycle.
3. Appreciate the pressures and constraints on a project manager, to manage project scope while achieving acceptable levels of quality, within the constraints of time and budget.
4. Apply appropriate tools and techniques of project management to simple projects.
5. Analyse the basic behavioural issues involved in working as part of a project team.
6. Demonstrate the ability to work as part of a project team to plan and carry out a simple project.
7. Appreciate the assumptions on which the various project management tools and techniques are based, and hence evaluate the limits of usefulness of these tools and techniques

Subject Content

- Project management and the Project life cycle
- Different types of projects
- Organisational strategy and project selection
- Project planning and initiation

Organisational context and project organisation
 Work Breakdown Structure
 Critical Path Method
 Resource scheduling
 Managing project teams
 Risk management
 Documentation and control
 Project audit and closure

BUSM 2037 Sport Entertainment

Credit Points 10

Legacy Code 200996

Coordinator Jess Richards ([https://directory.westernsydney.edu.au/search/name/Jess Richards/](https://directory.westernsydney.edu.au/search/name/Jess%20Richards/))

Description Sport is now at the heart of many cultures with sport consumption, in a variety of forms, playing a significant role in the lives of many people. This unit explores and explains the sporting experience, providing an understanding of those who consume sport and the relationship between sport, its consumers, and the media. The unit equips students with the tools required to work with the media, producing resources, and to engage with and through social media platforms.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BUSM 2038 - Strategic Communication in Sport
LGYA 7216 - Sport Management 2
LGYA 4796 - Communication in Sport

Assumed Knowledge

A basic understanding of the sport industry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the sporting experience with an understanding of factors such as Sportscape;
2. Evaluate the relationship between various types of mass media and the subsequent demand for sport;
3. Explain sport consumers' behaviour from a theoretical perspective;

4. Evaluate practices and policies which will prepare sports organisation for working with the media;
5. Create sports-related writing for a club or organisation;
6. Engage with social media platforms in a professional capacity.

Subject Content

- The sporting experience
- Sports Consumers, their motivations and behaviours
- Working with The media
- sport in The digital era, including social media
- Sports writing
- Sports public relations

BUSM 2039 The Accommodation Industry

Credit Points 10

Legacy Code 200993

Coordinator Bruce Cameron ([https://directory.westernsydney.edu.au/search/name/Bruce Cameron/](https://directory.westernsydney.edu.au/search/name/Bruce%20Cameron/))

Description The Accommodation Industry is concerned with developing skills for managing people, operations and business in hotels and hospitality companies. It focuses on the business operations and management issues to be found in successful lodging enterprises. The unit incorporates the application of key aspects of marketing, service management, financial management, revenue management and business development within a hospitality context. It develops effective problem solving and critical thinking skills necessary to meet the service industry's ever-changing needs. Students can expect to find

employment in a range of domestic and international accommodation management facilities such as hotels, resort groups, cruise ships and the accommodation sector.

School Business

Discipline Hospitality Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BUSM 2032 - Managing the Accommodation Experience
LGYA 4391 - Managing the Accommodation Experience

Assumed Knowledge

A basic understanding of the core concepts of hospitality.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess components of the accommodation industry;
2. Analyse the management functions in marketing, finance, operations, people and general management;
3. Interpret financial aspects of hotel management, including revenue management;
4. Evaluate sustainable accommodation aspects;
5. Analyse current issues in accommodation management.

Subject Content

- Hotel Operations including front office, The lodging cycle and The application of yield management principles in Forecasting demand
- strategic themes, goals, objectives, strategies, and tactics using specific tools
- Understanding Consumer behaviour, segmentation, targeting and positioning, The extended Marketing mix and ethics in Marketing
- relevant accounting concepts and knowledge applied to interpret and analyse financial performances of An entity
- meeting Customer Expectations and ensuring Customer satisfaction
- explore current Trends and opportunities in Hotel sustainability

BUSM 2040 The Service Enterprise

Credit Points 10

Legacy Code 200915

Coordinator Karina Wardle ([https://directory.westernsydney.edu.au/search/name/Karina Wardle/](https://directory.westernsydney.edu.au/search/name/Karina%20Wardle/))

Description Modern economies are increasingly service-based. Knowledge and skills in the field of services are required by people operating across various industries and in a range of roles. Business graduates will either work for firms whose central offering is service or be employed by organisations that use service as an integral supporting element in what they do and what they offer. The unit aims to expose students to relevant theory and practices in order to develop their abilities for potential career opportunities in a service environment.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BUSM 2030 - Managing and Developing Careers
BUSM 2041 - Working in Professions MKTG 3011 - Marketing of Services

Restrictions Successful completion of 60 credit points.

Assumed Knowledge

Students should have a foundation knowledge of business markets and enterprise structure.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Research and reflect on opportunities for individual employability in service industries.
2. Develop self-awareness and provide evidence of the skills and knowledge required for employability and career transition.
3. Analyse key services concepts and theories to address practical service situations.
4. Critically evaluate and use information to formulate distinctive strategies for service based businesses.
5. Apply service design thinking principles when solving service based problems

Subject Content

1. What are services? The nature, type and importance of services to the economy.
2. Working in service markets: career opportunities and employee roles.
3. Service delivery: the service encounter, service quality, failure and recovery.
4. Service pricing: managing capacity and demand.
5. Servicescapes, both physical and digital in a global and evolving industry.
6. Introducing design thinking within the service environment.
7. Customer expectations, perceptions and roles.
8. Integrated service marketing.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BUSM 2041 Working in Professions

Credit Points 10

Legacy Code 200914

Coordinator Krishan Prasad ([https://directory.westernsydney.edu.au/search/name/Krishan Prasad/](https://directory.westernsydney.edu.au/search/name/Krishan%20Prasad/))

Description Working in Professions focuses on developing career understandings and appreciating the personal attributes required for employability in the 'real world' of accounting, banking, economics, finance and property. This is a professional unit in the Bachelor of Business, but is also open to participants with an interest in examining and developing their knowledge of employability in these career areas. The unit involves examination of the evolving nature of work in a dynamic globalised context; applied labour market and industry structure analysis; and an exploration of employability attributes, capacities and opportunities across a range of career paths. Successful completion of the unit allows participants to gauge employer expectations, and to identify and reflect on career opportunities in their chosen fields.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects BUSM 2030 - Managing and Developing Careers
BUSM 2040 - The Service Enterprise

Restrictions Successful completion of 60 credit points of Business subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply labour market analysis to identify a range of career opportunities in accounting, banking, economics, finance and property.
2. Explain how career prospects in business will evolve over time.
3. Identify employee skills and attributes relevant to their chosen career.
4. Identify the role of professional bodies for the modern business professional.

5. Explain the role of ethics in the modern business world.
6. Research and reflect on opportunities for individual employability.

Subject Content

1. The meaning of work and the global labour environment.
2. Communication and the workforce in relation to small, medium and large enterprises.
3. Employability skills and attributes required by business professionals.
4. The professions:
 - ? Diversity of the accounting profession
 - ? The finance professional
 - ? Property profession
 - ? Financial advice profession
5. Use of technology in the professions.
6. Legislative requirements and the role of professional bodies.
7. Professional ethics in business.
8. Organising work life balance.
9. Evaluating and assessing career options.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Professional Task	Part 1: Summary 1,200 words (20%). Part 2: Presentation 15 minutes (10%)	30	N	Group

BUSM 2043 Project Management in Humanitarian and Development Studies

Credit Points 10

Legacy Code 102707

Coordinator Thierno Diallo ([https://directory.westernsydney.edu.au/search/name/Thierno Diallo/](https://directory.westernsydney.edu.au/search/name/Thierno%20Diallo/))

Description The primary aim of this unit is to equip students with the concepts, processes and major techniques employed in project management. By integrating theory and practice this unit provides a strong foundation for students in project management as an essential skill in the field of humanitarian and development studies. The unit uses the project management body of knowledge (PMBOK) which covers the required competencies in project management including planning, monitoring, control, implementation and evaluation.

School Social Sciences

Discipline Project Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand and demonstrate project, program, and portfolio management.
2. List and describe the stages of the project life cycle, and the tasks and deliverables for each stage.
3. Describe and apply key processes in project management including risk management.
4. Execute and monitor various project management techniques.
5. Describe and apply leadership and management capabilities required for managing projects.

Subject Content

Introduction to Project, Program, and Portfolio Management
 Project, Program, and Portfolio Selection
 Initiating Projects
 Planning Projects, Part 1 (Project Integration and Scope Management)
 Planning Projects, Part 2 (Project Time and Cost Management)
 Planning Projects, Part 3 (Project Quality, Human Resource, Communications, Stakeholder, Risk, and Procurement Management)
 Executing Projects
 Monitoring, control and evaluation Projects
 Closing Projects
 International Projects
 Best Practices in Project Management

BUSM 2044 Health Service Management

Credit Points 10

Legacy Code 401393

Coordinator Stewart Alford ([https://directory.westernsydney.edu.au/search/name/Stewart Alford/](https://directory.westernsydney.edu.au/search/name/Stewart%20Alford/))

Description The unit builds on previous Health Services Management curriculum. It is focused on the changing role of the health services manager and competencies required to manage and lead health services efficiently and effectively in both current and emerging areas of healthcare and health management. Various management functions are explored through 140 hours of placement with blended learning activities including: strategic management, values-based healthcare, quality and safety, risk and governance, health services policy and performance management, finance and resource allocation.

School Health Sciences

Discipline Public and Health Care Administration

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Co-requisite(s) BUSM 1037

Incompatible Subjects BUSM 3015 - Health Services Management Practice BUSM 3014 - Health Services Financial Management

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop knowledge of Value-based healthcare and competencies required to manage and lead health services effectively;

- Analyse a range of external environmental and community factors as well as internal factors that influence policy and the management of health services;
- Develop an understanding of Quality and Safety, Risk and Governance of health care systems;
- Critically examine policy, standards and practice guidelines being used as a basis for performance measurement and management in health services;
- Analyse current financial management, resource allocation and resource management practices within health services management;
- Develop professional and social responsibility by influencing and leading collaborative discourse and effective teamwork in response to a health services management problem and the process of developing a solution;
- Analyse pertinent case studies through material covered in classes, student placements and deeply reflect this experience to the development of health service management competencies.

Subject Content

- proactive management and strategic planning
- value-based healthcare, leadership and Employability skills and required to manage and lead health services effectively
- organisational Governance, change and Conflict management
- Managerial decision making
- health system performance
- work health safety and Risk management
- resource management
- human resource management
- Communications and relationship management

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

- Find your existing National Police Check or apply for one
- Gather documentary evidence of your vaccination history
- Print and complete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
- Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- <http://training.gov.au> (<http://training.gov.au/>)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

BUSM 2045 Sport and Society

Credit Points 10

Legacy Code 201079

Coordinator Jess Richards ([https://directory.westernsydney.edu.au/search/name/Jess Richards/](https://directory.westernsydney.edu.au/search/name/Jess%20Richards/))

Description Sport plays a prominent role in the lives of many people across Australia and globally. It provides an opportunity for pleasure and a sense of freedom which may be missing in modern society. However, sport is a contested concept and can be a domain which both reinforces and challenges notions such as gender, ethnicity, and nation. This unit explores sport from a sociological perspective, examining the relationship between sport and society, and encourages students to challenge accepted norms and ideologies.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 2 subject

Equivalent Subjects SPRT 3004 - Contemporary Issues in Sport Management BUSM 3068 Sport and Society

Assumed Knowledge

A basic understanding of the sport industry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss the relationship between sport and society
2. Explain the role of sport in national identity
3. Outline the role that sport plays in popular culture
4. Review sporting practice from an ethical perspective
5. Summarise conflicts which arise within and because of sport

Subject Content

Sociological theories of sport
Sport and corporate social responsibility
Sport and social issues
Sport and social inequality and diversity
Sport and social media
Sport and governance

Assessment

BUSM 3004 Contemporary Management Issues

Credit Points 10

Legacy Code 200568

Coordinator Pauline Ross ([https://directory.westernsydney.edu.au/search/name/Pauline Ross/](https://directory.westernsydney.edu.au/search/name/Pauline%20Ross/))

Description This is an engaged unit that requires students to undertake real-world projects to support selected industry or community partners. The unit blends in-class and online activities as well as individual and group work, with self-directed problem-based learning. The focus of students' learning is on sustainable business, including the economic, social and environmental dimensions of business. The in-class workshops support students to conduct the required engagement activities with industry or community partners. As a third-year unit, attention is given to students' application of the knowledge and skills already acquired in their degree programs, and on the practice of business management skills.

School Business

BUSM 3005 Creating Change and Innovation

Credit Points 10

Legacy Code 200862

Coordinator Ann Dadich ([https://directory.westernsydney.edu.au/search/name/Ann Dadich/](https://directory.westernsydney.edu.au/search/name/Ann%20Dadich/))

Description The future of work requires us to: be innovative; manage change; have interpersonal skills; and be lifelong learners. Towards these aspirations, this subject introduces the concepts of change and innovation as they relate to organisational transformation. It explores change as a human and social process. Furthermore, it offers opportunities to consider relevant bona fide examples of change and innovation to expand ideas on how to inspire and lead organisational transformation. As such, this subject provides the theoretical and practical understandings that you will need as both a student of change and a future manager.

School Business

Discipline Organisation Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects BUSM 3038 Management of Change LGYB 9013 Management of Change

Learning Outcomes

BUSM 3006 Design Thinking for Creativity

Credit Points 10

Legacy Code 200918

Coordinator Tendai Chikweche ([https://directory.westernsydney.edu.au/search/name/Tendai Chikweche/](https://directory.westernsydney.edu.au/search/name/Tendai%20Chikweche/))

Description Innovation and creative thinking are important skills in strategy development. Part of this process is the ability to solve problems and discover new opportunities; or in other words, the notion of "design thinking". This unit introduces students to concepts and frameworks to create innovative products, services and systems for a range of enterprises, industries and markets. Students will explore and analyse business and social networks, clusters and ecosystems via practice based projects. Design thinking principles will be applied to systematically develop ideas into innovative solutions as a way to drive business growth.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Restrictions Successful completion of 80 credit points.

Assumed Knowledge

Students should have a foundation knowledge of business markets and innovation theory.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse innovation in different enterprise or social contexts.
2. Evaluate the practice and protocols of professional and social networks.
3. Use creativity and innovation to solve strategic business markets problems.
4. Demonstrate the process of creative thinking.

Subject Content

1. The innovation cycle including ideation, creativity and innovation.
2. Business and social enterprise innovation.
3. Innovation networks, clusters and ecosystems, identification, standards and protocols.
4. Innovation within a marketing context.
5. Creativity principles, frameworks and methods.
6. Introduction to design thinking principles and frameworks.
7. Developing ideation into innovative products, services, processes, and enterprises.

BUSM 3007 Destination Management

Credit Points 10

Legacy Code 101270

Coordinator Felicity Picken ([https://directory.westernsydney.edu.au/search/name/Felicity Picken/](https://directory.westernsydney.edu.au/search/name/Felicity%20Picken/))

Description Destination Management provides students with a fundamental understanding of the concepts in destination management. This includes coordination of the destination in terms of the tourism industry's sectors, their relationship with each other and the challenges they face. An appreciation of the importance of a destination's unique cultural, natural and economic attributes is developed from the viewpoint of the visitor and industry representatives. The implications of organising urban spaces for the visitor experience and its influence on sustainability and competitiveness are explored.

School Social Sciences

Discipline Tourism Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse structure, roles and interrelationships of Destination Management Organisations (DMO) at various levels of operation.
2. Evaluate factors influencing destination management and marketing.
3. Undertake a destination resource analysis (Audit).
4. Evaluate destination marketing strategies based upon destination management objectives.
5. Critique destination management implementation.
6. Identify and describe opportunities, challenges and constraints affecting DMOs in formulating strategies.

Subject Content

Destination characteristics and destination profiling (critical review).
 Coordination structures and principle players in the coordination of destination management (Government, Industry, NGO and Community).
 Strategic and sustainable destination management (policy, practices and issues).
 Destination marketing.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Critical Review	800 words	25	N	Individual
Practical Report	500 words	30	N	Group
	2,000 words	45	N	Individual

BUSM 3008 Developing Sport Professionals

Credit Points 10

Legacy Code 200997

Coordinator Jess Richards ([https://directory.westernsydney.edu.au/search/name/Jess Richards/](https://directory.westernsydney.edu.au/search/name/Jess%20Richards/))

Description The Sport Management Internship unit provides students with an opportunity to engage with the sport industry through a 120 hour [minimum] industry placement. Students are provided with a unique opportunity to observe sport management practitioners in action and learn in a practical "hands-on" setting. Experience in the field of study is an essential ingredient in preparing an individual for employment either during the period of study or after graduation. Students have the opportunity to apply theoretical concepts, knowledge and skills acquired in lectures and workshops in professional sport, recreation and aligned settings.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1031

Equivalent Subjects LGYA 7605 - Professional Practice in Sport Management 3 LGYA 7603 - Professional Practice in Sport Management 2 LGYA 4807 - Professional Practice in Sport Management 1 BUSM 3066 - Sport Management Internship

Restrictions Student must be enrolled in one of the following programs: 1818 Bachelor of Arts/Bachelor of Business 1819 Bachelor of Communication/Bachelor of Business 1820 Bachelor of International Studies/Bachelor of Business 2786 Bachelor of Business 2787 Bachelor of Business (Advanced Business Leadership) 2788 Bachelor of Business/Bachelor of Laws 2789 Bachelor of Business (Advanced Business Leadership)/Bachelor of Laws 3728 Bachelor of Engineering (Honours)/Bachelor of Business 3737 Bachelor of Information and Communications Technology/Bachelor of Business 3744 Bachelor of Information Systems/Bachelor of Business 3745 Bachelor of Information Systems Advanced/Bachelor of Business 4748 Bachelor of Science/Bachelor of Business 6037 Diploma in Business/Bachelor of Business

Assumed Knowledge

An introductory level of knowledge in Sport Management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Contextualise sport organisations in the broader socio-cultural context;
2. Communicate effectively and reflect on the importance of communication in organisations;
3. Demonstrate skills in and reflect on the delivery of services as part of a team and independently;
4. Demonstrate an awareness of, and an ability to reflect upon, personal values, experiences, and personality and how these affect the ability to respond in a work environment;
5. Develop a comprehension of the structure and function of a sport or sport related organisation;
6. Reflect on their ability to use initiative and critically evaluate the contemporary managerial practices of sport or sport related organisations;
7. Critically reflect on the value of professional networks within the sport industry.

Subject Content

- Career readiness and employability skills development [i.e career and personal goals development, resume writing, developing a LinkedIn profile, personal branding, interview skills]
- Developing a professional portfolio [i.e. electronic artefacts such as letters of recommendation, completion of activities/tasks, substantive projects]
- 120 internship hours [minimum] jointly supervised/facilitated by an experienced sport management practitioner and WSU academic mentor
- Critical reflection on experiences and interpretations while completing internship hours [reflexive practitioner outcomes enabled through ongoing industry and academic mentor formal/informal one-on-one and small group meetings]

Special Requirements

Legislative pre-requisites

Some placements may require completion of a Prohibited Persons Declaration; Criminal Record Check Clearance and Immunisation. This will be considered on a case by case basis.

Students are expected to have gained an introductory level of knowledge in operations and supply chain management.

Teaching Periods

BUSM 3014 Health Services Financial Management

Credit Points 10

Legacy Code 400279

Coordinator Stewart Alford ([https://directory.westernsydney.edu.au/search/name/Stewart Alford/](https://directory.westernsydney.edu.au/search/name/Stewart%20Alford/))

Description The Australian health care system must account for use of resources, and ensure their equitable and efficient use. Increasingly devolution of management function to cost centre level in health care organisations is occurring. Managers must consider the financial implications of clinical decisions, understand and act on accounting information. They are held responsible for the financial outcomes of their activities. This unit develops a basic knowledge of accounting principles, health services funding arrangements, government reforms, financial reporting, preparation of budgets, business cases and economic appraisals. There are 140 hours of placement in the field working with health managers on financial issues.

School Health Sciences

Discipline Public and Health Care Administration

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 3015

Restrictions

Students must be enrolled in 4545 or 4656 Bachelor of Health Science or 6000 Diploma in Health Science/Bachelor of Health Science

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Articulate health funding arrangements between the Commonwealth and the States, cost shifting and the need for reform.
2. Examine the mechanisms used by NSW Health to distribute funds to areas and regions.
3. Explain accounting concepts and terms, how financial events are recorded and reported in health services accounting systems.
4. Critically interpret the various reports produced by the accounting information systems in health services.
5. Critically interpret a health cost centre report and plan ways to come in on budget.
6. Develop a budget and business case for a project.
7. Articulate financial management issues such as capital charging, accounting for capital assets, costing of contracted services, etc., as it relates to health services.

Subject Content

- placement requirements.
- Commonwealth fiscal responsibilities, funding arrangements and health role.
- The accounting cycle: Commonwealth and state budget.
- state health role and episode funding.
- policy Initiatives and opportunities for reform.
- health accounting information systems.
- Basic accounting concepts and terms.

- general purpose and SP&t accounts.
- financial accounting in health.
- health financial Reporting including annual reports.
- management accounting and how financial events are reported in health services.
- key performance indicators and cost centre report interpretation.
- budget and health business case preparation.
- how to Evaluate financial position with performance ratios eg Contract services or purchase, profit, loss and return on investments.
- accounting for capital Assets eg The PFI and capital charging.
- how to conduct An economic appraisal of A new development.

BUSM 3016 Health Services Quality Management

Credit Points 10

Legacy Code 400284

Coordinator Margaret Skropeta ([https://directory.westernsydney.edu.au/search/name/Margaret Skropeta/](https://directory.westernsydney.edu.au/search/name/Margaret%20Skropeta/))

Description The need to improve quality while reducing expenditure has forced health services to re-evaluate their strategies. For these reasons many have embraced the philosophies of Total Quality Management (TQM). Central to its practice is a focus on flexible, consultative management, with the needs of the customer seen as vital to guiding a continuous process of improvement. TQM is a whole system concept, which recognizes the need to manage sets of interacting technical, cultural and political issues. This unit explores the various aspects of TQM and in particular its application within the health services.

School Health Sciences

Discipline Public and Health Care Administration

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of the concept of quality and quality improvement and their underpinning principles.
2. Evaluate the application of quality improvement principles and practices in the health care setting.
3. Demonstrate use of the tools of the quality improvement cycle.
4. Identify and discuss institutional accreditation.
5. Demonstrate an understanding of the work of the Australian Council on Healthcare Standards (ACHS).

Subject Content

- Overview of quality Issues in health care.
- historical development of quality improvement.
- Overview of quality improvement (QI) and its application in health services.
- The quality improvement Cycle.
- data based decision making in health care.
- tools used in health QI.
- best practice in health services.
- Accreditation in health services.
- ACHS equip

BUSM 3017 Health Services Workforce Management

Credit Points 10

Legacy Code 400788

Coordinator Paul Preobrajensky ([https://directory.westernsydney.edu.au/search/name/Paul Preobrajensky/](https://directory.westernsydney.edu.au/search/name/Paul%20Preobrajensky/))

Description NOTE: This subject is no longer on offer from Spring 2022. Students should enrol in BUSM 3080 Health Care Systems and Organisation Culture instead. This is a flexible learning unit looking at human resource management (HRM) as a strategic activity of health organisations especially as workforce shortages pose significant challenges to the health and aged care sectors. The workforce, with appropriate knowledge and expertise, is essential to the efficient and effective delivery of quality health services. Successful organisations shape the workforce to anticipate current and future directions and goals. Workforce planning is a crucial element of this approach and its success.

School Health Sciences

Discipline Public and Health Care Administration

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 3015

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain strategic and operational approaches to workforce planning and management in the national and local policy and planning framework for the health and the aged care industry.
2. Critically analyse organisational approaches to workforce planning and management.

3. Apply relevant information technology and HRIS in order to profile the workforce and monitor and review performance indicators.
4. Articulate skills in workforce management, including recruitment and retention, performance management and development, education and training, workforce redesign and employee relations, for the health and aged care industry.

Subject Content

1. International and national policy and planning frameworks for the health workforce.
2. The Australian health care workforce ? overview, trends and issues.
3. Workforce planning and management at organisational level.
4. Developing the organisational workforce plan at strategic and operational levels.
5. Workforce planning processes.
6. Information technology and human resource information systems.
7. Human resources issues in the health and aged care industry.
8. Workforce reform and innovation.
9. Productivity of the health workforce.

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 2036

Equivalent Subjects LGYA 4386 - Tourism and Hospitality Research Project

Incompatible Subjects LGYA 4813 - Sport Management Applied Project

Assumed Knowledge

This is an advanced subject. Students are expected to have gained an introductory level of knowledge in hospitality management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Display an ability to integrate action and theory (prior learning) through industry and industry related projects;
2. Develop suggestions and recommendations in response to contemporary hospitality industry based problems;
3. Apply a team based approach to real world problem solving within a hospitality context;
4. Reflect on the process and outcomes of participating with an industry partner on a project with industry applicable outcomes; OR
5. Reflect on an international hospitality environment.

Subject Content

Experience gained from exercising the learning derived in previous core units of the key program through relevant engaged subject which may be at a local or domestic level.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Individual Dossier	1250 words	25	N	Individual
Group Project	Up to 4000 words	50	N	Group
Reflective Journal	1250 words	25	N	Individual

Prescribed Texts

- There is no prescribed text given the individual nature of student interests and projects.

BUSM 3021 Hospitality Places and Spaces

Credit Points 10

Legacy Code 200989

Coordinator Tim Hall ([https://directory.westernsydney.edu.au/search/name/Tim Hall/](https://directory.westernsydney.edu.au/search/name/Tim%20Hall/))

Description Contemporary hospitality settings often require specialised services and distinctive facilities. Matching the physical spaces and places with hospitality, to the services and experiences provided, is an integral part/consideration of contemporary hospitality practice. As future managers in the industry, it is imperative to have a sound basic knowledge of the design, development and commercial viability of such products, services and spaces, especially in the context of consumer expectations, in order to remain competitive and sustainable.

School Business

Discipline Hospitality Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects BUSM 3055 - Planning and Design Hospitality Facilities

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the challenges facing hospitality managers in the design, development and redevelopment of hospitality facilities;
2. Identify and discuss aspects of asset management in relation to servicescapes, compliance and sustainability;
3. Evaluate the role of a hospitality venue in providing a customer experience;
4. Compare and contrast the fitness for purpose of various hospitality venues.

Subject Content

- hospitality Facilities and venues ? design, maintenance and redesign
- Servicescapes as areas for The delivery of A hospitality experience
- incorporating environmental sustainability into facility and venue design and Operations
- The role of The guest within A facility or venue
- Functional, organisational, environmental and Aesthetic elements of hospitality Facilities
- The role of design in generating revenue
- Distinctions of form and function in Facilities and venue design

BUSM 3024 Human Resource and Industrial Relations Strategy

Credit Points 10

Legacy Code 200740

Coordinator Terri Mylett ([https://directory.westernsydney.edu.au/search/name/Terri Mylett/](https://directory.westernsydney.edu.au/search/name/Terri%20Mylett/))

Description Students in 'Human Resource and Industrial Relations Strategy' analyse the human resource and industrial relations strategies of the major employment relations stakeholders. While

the principal focus is on the organisational level of analysis and on the strategic interventions introduced by management, the unit also analyses the strategic roles of government, trade unions, and employer associations. Through a range of learning activities, students examine the relationship between business strategies and HR/IR strategies, strategic HR/IR interventions, the concept of strategic choice as it concerns stakeholders and the evaluation of strategy. Students also engage with the development of human resource management and industrial relations as a professional field and consider ethics and professional standards.

School Business

Discipline Industrial Relations

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1023 OR
BUSM 1021

Incompatible Subjects LGYA 4824 - Human Resource Strategy LGYA 4823 - Industrial Relations Strategy

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the role of strategy in contemporary human resource management and industrial relations.
2. Apply the implications of the various contemporary models of human resource and industrial relations strategy to the practice of human resource management and industrial relations.
3. Critically assess the role of principal stakeholders (trade unions, government and employer associations) as strategic actors in the business environment.
4. Evaluate organisations of application of strategic human resource and industrial relations interventions.
5. Critically assess the role of human resource management and Industrial relations professionals and ethics, in order to engage responsibly in work and civic life on the basis of respect for diversity and social justice principles.

Subject Content

1. Perspectives on employment relations.
2. Business strategy and the link to HRM.
3. Approaches to HR strategy.
4. Linking SHRM to competitive advantage.
5. Planning and building a workforce: talent management.
6. Culture, power and voice in the workplace.
7. Workforce performance and the 'Black Box' of HRM.
8. SHRM in industrial contexts.
9. Strategy and structure.
10. Stakeholders and change: the role of the state.
11. Responses to change: trade union and employer association strategies.
12. Professional practice: evaluation and ethics in employment relations.

BUSM 3025 Incubator 5: Operational Aspects of Entrepreneurship

Credit Points 10

Legacy Code 301170

Coordinator Anton Bogdanovych ([https://directory.westernsydney.edu.au/search/name/Anton Bogdanovych/](https://directory.westernsydney.edu.au/search/name/Anton%20Bogdanovych/))

Description Planning is an important part of setting up a start-up business. This would require investigating into setting goals, figuring out how to track progress, what to do when things don't go to plan and also to communicate your business concept to others, such as potential investors. This unit aims to develop the skills and knowledge required for making a business plan for the start-up organisation through a number of theoretical topics, such as: developing marketing and operational plans, staffing and management. At the completion of this unit, students will have developed a viable business plan for their start-up. NOTE: This unit is offered at the Werrington Campus "Launch Pad".

School Computer, Data & Math Sciences

Discipline Business Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the various resource requirements for a start-up operation
2. Apply agile product management
3. Use appropriate examples to demonstrate the cycle of iterative, incremental development and continual improvement
4. Appreciate the human resources (HR) and staffing needs of a start-up operation
5. Develop short-mid-term business plan
6. Apply individual skills and knowledge in a collaborative and effective manner to achieve a common goal in a group setting
7. Demonstrate effective verbal and written communication skills that appeal to a wide audience

Subject Content

Operational planning for short term, mid-term and long term

Resource allocation

Agile product management

Staffing and management structures

Iterative, incremental development and continual improvement

BUSM 3027 Innovation and Professional Practice

Credit Points 10

Legacy Code 200919

Coordinator Dilupa Nakandala ([https://directory.westernsydney.edu.au/search/name/Dilupa Nakandala/](https://directory.westernsydney.edu.au/search/name/Dilupa%20Nakandala/))

Description Innovation and Professional Practice uses design thinking to develop participants' capacity to innovate across a range of changing organisational environments and future-oriented work roles. Networking, collaboration and team work around contemporary projects will develop the attitudes and abilities characteristic of ways that professionals lead and contribute to innovation in many contexts. The unit builds on study of organisation and leadership in the Bachelor of Business, and develops participants' innovative thinking through the prism of business acumen. The unit supports work integrated learning approaches that will enable participants to develop portfolio evidence of their professional capacity to lead and participate in sustainable business change.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Restrictions Successful completion of 80 credit points. The Spring Composite subject offering is only available to students who have been approved for a student grant under the New Colombo Plan (NCP) Mobility Program. Any non-NCP students who enrol in this offering will be transferred by the School to the relevant Day or Evening offering.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse innovation in different enterprise or social contexts;
2. Engage with and reflect on a work integrated learning activity;

3. Evaluate the practice and protocols of professional and social networks;
4. Utilise design thinking as a tool for analysis in enterprise or professional contexts.

Subject Content

- innovation in contemporary Organisations, including business and social enterprise context
- contemporary work environments and Innovative approaches to designing work Roles for The future
- design thinking as A method for practical and Creative Problem solving
- communicating, engaging and networking in professional contexts
- Pitching for professional impact
- reflection as A tool for contemporary professional practice

BUSM 3028 Innovation, Enterprise and Society

Credit Points 10

Legacy Code 200917

Coordinator Margaret Moussa ([https://directory.westernsydney.edu.au/search/name/Margaret Moussa/](https://directory.westernsydney.edu.au/search/name/Margaret%20Moussa/))

Description Innovation, Enterprise and Society focuses on forces driving innovation, creativity and technical change at the levels of entrepreneurship, enterprise, economy and society. It also examines the effects of innovation at these various levels. This unit is a professional core unit in the Bachelor of Business. The unit takes a multi-disciplinary approach utilising critical thinking, debates, problem solving, policy analysis and case studies. Students will understand the professional, social, public policy and global networks and systems informing and surrounding innovation. Successful completion of the unit

equips students to appreciate the entrepreneurial, political and social dimensions of innovation.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Restrictions Successful completion of 80 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse innovation in different enterprise or social contexts.
2. Evaluate the practice and protocols of professional and social networks.
3. Identify opportunities and risks of innovation.
4. Evaluate innovation at a systems or macro level.
5. Analyse the public policy framework surrounding innovation.

Subject Content

1. Innovation at the business and social enterprise level.
2. Financing new and growing business and social enterprises.
3. The economic and social drivers and effects of innovation.
 - ? Oligopoly power, cost competition, differences in productivity and interactions between corporations and small competitive firms.
 - ? The economic and social and cultural effects of long term technical development and technical change.
4. Innovation, public policy and the institutions of science.
 - ? Innovation clusters and networks.
 - ? Strategy and communication for innovation.
 - ? Linking innovation, public policy and science.
5. Financial innovations in context.
 - ? The causes and effects of innovation in financial products.
 - ? Innovation at the macro systems level: changing and creating societies to address or avert global social and environmental crises.

BUSM 3029 International Business Finance

Credit Points 10

Legacy Code 200595

Coordinator James Farrell ([https://directory.westernsydney.edu.au/search/name/James Farrell/](https://directory.westernsydney.edu.au/search/name/James%20Farrell/))

Description The unit is designed to provide students with an overview of the economic, political and institutional environment in which international business is conducted. Particular attention is given to the historical development of the international monetary system, the transnational corporation and the impact of globalization upon international financial transactions and international business practices.

School Business

Discipline Business And Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 9776 - International Business Finance

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe, with reference to the Australian and international business environment, the broad institutional, historical, political and economic contexts of MNC behaviour and international financial transactions generally;
2. Evaluate the various kinds of risks facing MNCs;
3. Recognize the means by which MNCs attempt to manage the various kinds of risks they face;
4. Analyse how the concept of **ecorporate governance** is relevant to the study of MNC behaviour;
5. Examine the role of national government as it impacts upon MNCs and the macroeconomic environment (both national and international) in which MNCs operate;

6. Assess the issues relevant to the analysis of exchange rate behaviour as a factor influencing MNC operational decision making.

Subject Content

- The international Monetary system: An historical analysis
- The Multinational corporation: An institutional, historical and political perspective
- The historical process of globalization
- exchange rate behaviour
- The role of government
- The political context of foreign direct investment
- The international business context of The 'Great Recession'
- corporate Governance
- international financing and investment

Teaching Periods

BUSM 3030 International Business Project

Credit Points 10

Legacy Code 200590

Coordinator Sabreena Amin ([https://directory.westernsydney.edu.au/search/name/Sabreena Amin/](https://directory.westernsydney.edu.au/search/name/Sabreena%20Amin/))

Description This is a capstone unit in International Business. The aim of the unit is to give students a real-life action learning project in which they undertake an international business strategic planning and analysis exercise for a client organisation. This project usually involves students working in small teams for a client organisation under the direct supervision of the lecturer.

School Business

Discipline International Business

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1015

Equivalent Subjects LGYA 9777 - International Business Project 1

Assumed Knowledge

This is a capstone International Business subject. It is assumed that students have basic international business knowledge and research skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply a broad range of international business theories and concepts to a real organization's international business problem;
2. Collect and inter-relate relevant information to formulate an international business plan;
3. Evaluate alternative international business strategies using appropriate financial, numerical and evaluative tools;
4. Work effectively in groups through collaboration based on diversity of views and cultural backgrounds, using new and emerging collaborative technologies;
5. Engage effectively with the management of an organisation during all phases of the strategic planning process.

Subject Content

1. Student teams will work on an international business project on behalf of a specific organisation.
2. The aim is to produce a detailed international business plan that can be assessed by the client organisation for its viability, appropriateness, forecasted financial cost and payback and if so decided by the client, actually implemented
3. Contact with client companies will be between nominated team members and senior company executives.
4. The student teams will work under the direction of the lecturer. Student teams will work on an international business project on behalf of a specific organisation. The aim is to produce a detailed international business plan that can be assessed by the client organisation for its viability, appropriateness, forecasted financial cost and payback and if so decided by the client, actually implemented. Contact with client companies will be between nominated team members and senior company executives. The student teams will work under the direction of the lecturer.

Assessment

BUSM 3031 International Business Strategy

Credit Points 10

Legacy Code 200626

Coordinator Farid Ahmed ([https://directory.westernsydney.edu.au/search/name/Farid Ahmed/](https://directory.westernsydney.edu.au/search/name/Farid%20Ahmed/))

Description In an environment where operating internationally is becoming the norm rather than the exception, firms are faced with ever increasing complexity when formulating their business strategy. This requires an understanding of how firms become and remain international, the basic modes of international involvement, the practice of multinational management and how firms can establish a balance between the sometimes conflicting demands of headquarters, the subsidiary and the governments of all the countries where the multinational enterprise operates. This unit will cover these issues and will deal with both large and small companies that must be global to survive.

School Business

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) MKTG 1006 OR BUSM 1015

Equivalent Subjects LGYA 9771 - International Business Strategy

Restrictions

Note that only students enrolled at Sydney City Campus may register in the Sydney City Campus subjects offered at that location.

Assumed Knowledge

An understanding of the basic principles of marketing and international business.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate and apply international trade theories in analysing inter and intra industry trade between/among countries;
2. Formulate effective internationalisation and multinational business management strategies;
3. Develop appropriate strategies for managing a company's global value chain, international government relations, global workforce and international business ethics;
4. Appraise knowledge and skills required of global leaders and ways of acquiring them.

Subject Content

- The Internationalisation process
- international trade theories
- The Global business environment
- Export Operations
- Global sourcing strategy
- Licensing
- international joint ventures
- international business strategy formulation
- globalisation and organisation
- The Global business manager
- Global leadership
- government intervention and international business strategy
- international business ethics

BUSM 3032 International Human Resource Management

Credit Points 10

Legacy Code 200621

Coordinator Youqing Fan ([https://directory.westernsydney.edu.au/search/name/Youqing Fan/](https://directory.westernsydney.edu.au/search/name/Youqing%20Fan/))

Description 'International Human Resource Management' examines the implications for human resource management that arise from the internationalisation of organisations. Through portfolio reports and case studies, students analyse a range of comparative systems and structures of employment relations and the strategic management of global organisations. This analysis includes a focus on key human resource functions including recruitment, training, reward and evaluation of the impact of society, politics, economics and culture of host countries on human resource strategies. Students examine also the role of global stakeholders and assess the implications for human rights that arise from globalisation.

School Business

Discipline Human Resource Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1023

Equivalent Subjects BUSM 2026 - International Human Resource Management

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration to enrol in the online offering. All other students must obtain DAP approval.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess the influence of context on the definition and conduct of human resource management;
2. Appreciate the role of ethics and the management of risk by Multi-National Corporations (MNCs);
3. Compare and contrast HRM models and practices in selected countries and/or regions in order to analyse the implications for the management of people in multi-national corporations;
4. Review developments in local and international industrial relations with reference to the activities of MNCs;
5. Produce assessment material consistent with the core attributes of knowledge capability, including logic and critical analysis, information literacy and social interaction skills, including working effectively with contextual knowledge and cultural sensitivity.

Subject Content

- distinction between Domestic human resource management and international human resource management
- Contextual Models of human resource management
- international human resource in organisational context
- approaches to staffing in Multinational context
- international employees and teams
- performance management of international employees
- Reward for international employees
- Repatriation of international employees
- key Issues in international labour relations
- ethics and key responsibilities of international companies

Special Requirements

Legislative pre-requisites

For students engaging in the international study tour - Student will have to obtain an appropriate visa for travel.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

BUSM 3033 International Management

Credit Points 10

Legacy Code 200623

Coordinator Louise Kippist ([https://directory.westernsydney.edu.au/search/name/Louise Kippist/](https://directory.westernsydney.edu.au/search/name/Louise%20Kippist/))

Description International Management provides an overview of issues confronting managers working in a complex globalised environment. Areas such as global and regional integration, the role of ethics and social responsibility, as well as the changing political, legal and technological environment require consideration by management in multinational organisations. The role of culture and human resource management is another significant area of failure by global managers. Finally global strategic issues such as managing political risk and government relations will be analysed to allow a deeper level of understanding of the complexities of managing in an internationally competitive marketplace.

School Business

Discipline Business And Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 9900 - International Management

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the impacts of globalisation and its effects on the technological, economic and political factors on management decision-making (Commands multiple skills and literacies to enable adaptable lifelong learning).
2. Analyse theoretical perspectives of international mergers/acquisitions as an entry strategy for multinational organisations to evaluate the challenges faced by organisations working in the global environment (Brings knowledge to life through responsible engagement and appreciation of diversity in an evolving world)
3. Interpret the major theoretical perspectives of culture and their effects on behaviour in an international environment (Brings knowledge through intellectual inquiry in professional or applied contexts)
4. Applies theories of international strategic management to organisations working in the global environment (Demonstrates comprehensive, coherent and connected knowledge).
5. Applies teamwork skills when undertaking collaborate tasks. (Brings knowledge to life through responsible engagement and appreciation of diversity in an evolving world)
6. Demonstrates how theory, research and practice apply in International Managements. (Commands multiple skills and illiteracies to enable adaptable lifelong learning)

Subject Content

Globalisation
 Political, legal and technological environment
 Social Responsibility
 Meanings and dimensions of culture
 Strategy formulation and organisational structure
 Entry strategies
 Managing political risk
 Management decision and control
 Leadership

BUSM 3036 Leadership and Entrepreneurship

Credit Points 10

Legacy Code 200863

Coordinator Claire Lewin ([https://directory.westernsydney.edu.au/search/name/Claire Lewin/](https://directory.westernsydney.edu.au/search/name/Claire%20Lewin/))

Description This unit explores the links between leadership and entrepreneurship in the context of dynamic domestic and global environments. It develops an understanding of how to initiate a business venture, taking advantages of perceived opportunities and mobilising the required resources. To this end, different theories and perspectives on leadership and entrepreneurship are examined, and students are encouraged to apply them to real-life situations. The knowledge and skills learned in this unit will enable future leaders to revitalise organisations and create value in the process of transforming innovations into goods or services.

School Business

Discipline Organisation Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Restrictions

Note that only students enrolled at WSU Online or Sydney City Campus may register in the WSU Online or Sydney City Campus subjects offered at those locations.

Learning Outcomes

On successful completion of this subject, students should be able to:

- Apply knowledge of entrepreneurship in business innovation;
- Engage in effective collaborative learning to produce an authentic business artefact;
- Reflect on the skills and qualities required to develop an **entrepreneurial mindset**;
- Apply knowledge of entrepreneurship in preparing, and delivering, a business presentation;
- Critically evaluate understandings of leadership based on experiential and theoretical learning.

Subject Content

- Introducing Entrepreneurship and The entrepreneurial mindset?
 - business start-ups - key concepts and approaches
 - business Models
 - focus on innovation - business model canvas
 - concepts of leadership
 - leadership in Global contexts
 - developing new leaders
 - leaders in The future-changing context

BUSM 3037 Leadership, Influence and Change B

Credit Points 20

Legacy Code 200885

Coordinator Kay Geronikos ([https://directory.westernsydney.edu.au/search/name/Kay Geronikos/](https://directory.westernsydney.edu.au/search/name/Kay%20Geronikos/))

Description This online unit builds on the work completed in Leadership, Influence and Change A. Students further their capacity to identify leadership, influence and change issues in their workplace. The work then focuses on an evidence based inquiry (EBI) report that demonstrates the learning across the two units. This will involve scoping, tightening the focus and then moving into an action phase for the EBI. In this way, the EBI will be the backbone of this unit.

School Business

Discipline Business And Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 2027

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Western Sydney Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate processes of leadership, influence and change within the day-day operations of organisations or other work contexts;
2. Draw upon different, and often conflicting, academic ideas in order to develop your own skills and practice of leading and initiating change within the scope of your potential to do so;
3. Plan, manage and communicate the processes and outcome of practical, work-based projects that require high-quality inquiry;
4. Conduct an evidence based inquiry incorporating processes of data collection and analysis;
5. Support the EBI with concepts from the relevant academic literature;
6. Reflect on the processes and contributing influences to the production of the EBI.

Subject Content

- concepts of leadership influence and change
- leadership and diversity
- Ethical leadership
- resistance to change
- work environment investigation
- scope and confirm The evidence-based inquiry (EBI)
- theories in practice
- using data as evidence
- outcomes and outputs

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/Group Task
Part 1: Link theory and practice to evidence-based inquiry (EBI). Part 2: Reflection on changed perspectives	Part 1: 1,000 words (10%). Part 2: 1,200 words (15%)	25	N	Individual
Final EBI report	2,500 words	40	N	Individual

Report on personal and professional learning through the EBI 1,750 words 35 N Individual

Prescribed Texts

- On line materials will be supplied through vUWS.

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description This online unit makes a broad distinction between organisational, inter-organisational and international contexts. Students will explore what is involved in collaborating effectively within and across such different contexts. There are six study themes throughout this unit, all of which are central to understanding how different individuals perceive and experience the different contexts in which they work. The themes are: managing aims, power, politics and trust, cultural diversity, international management perspectives, the darker side of collaborative arrangements and paradoxes, tensions and dialectics.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 3 subject

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Western Sydney Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain inter-organisational collaboration, organisational behaviour and international management theories and concepts relevant to managing across organisational and cultural boundaries;
2. Illustrate themes and challenges pertaining to organising and managing across intra, inter-organisational and international contexts;
3. Discuss management of aims, power, politics, trust, cultural diversity and the darker side of organising;
4. Use conceptual frameworks and theories to describe functions of organising and managing in and across organisational and international contexts;
5. Identify and critically assess different perspectives on managing and organising;
6. Synthesise, critically evaluate and challenge module-relevant theories of inter-organisational collaboration, organisational behaviour and international management;

7. Critically evaluate theories in relation to personal experiences of organisational, inter-organisational and international settings and the relative standpoints of others within different contexts;
8. Interpret information presented in a variety of forms including academic journals, books and online text;
9. Articulate ideas and communicate effectively with different audiences using appropriate inter-organisational collaboration, organisational behaviour and international management theories and concepts;
10. Identify and ask questions appropriate to the exploration of complex concepts;
11. Engage in reflective, experiential and collaborative learning in face-to-face and virtual contexts;
12. Use and adapt relevant concepts and theories to practically engage with a range of problems and issues in the work place;
13. Use specific inter-organisational collaboration, organisational behaviour and international management knowledge and cognitive and key skills developed during the subject to enhance individual work/practice.

Subject Content

- Working in organisational, interorganisational and international contexts
- managing aims
- organisational power, politics and trust
- cultural diversity
- international management perspectives
- The darker side of collaborative arrangements
- Paradoxes, tensions and dialectics

Credit Points 10

Legacy Code 200150

Coordinator Louise Ingersoll ([https://directory.westernsydney.edu.au/search/name/Louise Ingersoll/](https://directory.westernsydney.edu.au/search/name/Louise%20Ingersoll/))

Description This unit explores the complexities and challenges of managing diverse workforces in contemporary organisations. Using applied learning approaches, students are required to formulate corporate policies relating to diversity and then evaluate the implications for implementing these policies in a real world setting. As a key component of human resource management, students are expected to appreciate both the theoretical and practical elements of managing diversity and are required to reflect on their own learning process throughout the unit.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1023

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess the nature of workforce diversity and the drivers of its management;
2. Formulate corporate policy relating to diversity management;
3. Analyse the implications for implementing diversity initiatives and the link to competitive advantage;
4. Examine key challenges in managing a diverse workforce;
5. Evaluate the sources of and potential for conflict in diverse workplaces;
6. Relate diversity management theory to contemporary practices.

Subject Content

- dimensions of diversity
- diversity in context: external environment
- managing individuals, groups and teams
- Internal environment: strategic level
- Internal environment: Managerial level
- Internal environment: Operational level
- theory in managing diversity
- The business case for managing diversity
- challenges & Conflict in managing diversity
- contemporary Issues

Prescribed Texts

- Custom publication, Pearson 2010

Credit Points 10

Legacy Code 200175

Coordinator Meg Smith ([https://directory.westernsydney.edu.au/search/name/Meg Smith/](https://directory.westernsydney.edu.au/search/name/Meg%20Smith/))

Description This unit integrates the study of strategic theory and practice in the management of human resource management and industrial relations as they co-exist together in the employment relations model. Emphasis is placed on a blended learning approach to teaching and learning. Students undertaking this unit are required to participate in a HR Simulation exercise that explores the realities of employment relations in practice. Seminars feature role plays and case studies.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1023

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand and identify the different approaches to the study and practice of employment relations;
2. Recognise the relationship between industrial relations and human resource management both in the academic literature and in practice, including connections to organisation development;
3. Analyse the way that stakeholders act, together and separately, to shape employment relations processes;

4. Define and apply theory in key employment relations processes in regards to the connection to business objectives and strategies;
5. Relate the above to current issues in the field of employment relations;
6. Appreciate the diversity in which other students process and analyse information.

Subject Content

- HRM/IR competencies, strategies and emerging Trends
- Employing people
- managing people in High commitment Organisations
- developing and consulting people
- managing difficult situations ? grievances, discipline and exits
- financial implications of HR decisions: HR Simulation

BUSM 3044 Managing Marketing and Finance

Credit Points 20

Legacy Code 200887

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description This practical online unit is divided into two sections - marketing and finance - which will be studied sequentially. Topics in both sections have been chosen for their relevance to the needs of managers who may not have direct responsibility for either marketing or finance as such, but whose practice will be enhanced by an understanding and application of marketing practices and financial concepts. As students work through activities, problems and solutions, they will come to understand the organisational and wider management context in which they work as well as the constraints, choices and demands that managers need to take into account when making decisions.

School Business

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 3 subject

Incompatible Subjects MKTG 3016 - Strategic Marketing Management

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Western Sydney Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify a repertoire of marketing concepts, ideas and techniques used in a range of business contexts;
2. Apply the skills required for effective marketing to the workplace and/or case study scenarios;
3. Analyse the contribution individuals make in helping organisations meet their objectives;

4. Identify a repertoire of accounting and finance concepts, ideas and techniques relevant for management decision-making;
5. Apply these management concepts, ideas and techniques, where possible, to analyse the financial health of organisations;
6. Apply these concepts through problem-solving;
7. Develop communication skills to enable students to be confident and knowledgeable when discussing management issues;
8. Apply research skills and understanding of theory to workplace based situations;
9. Critically evaluate management practices and be able to challenge management ideas and concepts;
10. Write and produce management reports that can be understood by a diverse audience.

Subject Content

- what is marketing?
- Customer satisfaction
- market segmentation
- Understanding and influencing Customer behaviour
- delivering value in exchanges
- The Marketing mix
- The extended Marketing mix for services
- managing Marketing information
- The Marketing plan
- Understanding financial information
- budgets for planning and control
- The practical use of budgets
- Measuring costs in Organisations
- costing products and services
- financial decision making
- financial statements - The income statement and Balance sheet
- The Cash flow statement - Cash flow and Working capital management
- analysis and interpretation of financial statements

BUSM 3045 Managing Operations

Credit Points 10

Legacy Code 200865

Coordinator Hilal Hurriyet ([https://directory.westernsydney.edu.au/search/name/Hilal Hurriyet/](https://directory.westernsydney.edu.au/search/name/Hilal%20Hurriyet/))

Description Managing Operations is a comprehensive unit that focuses on the importance of operations in creating competitiveness and dynamic capabilities for individual organisations and organisations connected through supply chains and logistics processes within a global context. The unit is designed for students interested in enhancing their knowledge and skills in designing and improving critical operational processes used by organisations to provide products and services to customers. It encompasses internal and external operations for manufacturing and service organisations; their strategic choices; and tactical and operational decision-making processes for the management of critical and extended resources. The latest qualitative and quantitative tools and techniques, online business simulations and international case studies are used to practise problem solving processes to address challenges of a global nature in the business world.

Level Undergraduate Level 3 subject

Equivalent Subjects BUSM 3013 Global Operations and Logistics Management

Restrictions

Note that only students enrolled at WSU Online or Sydney City Campus may register in the WSU Online or Sydney City Campus subjects offered at those locations.

Assumed Knowledge

Students are expected to have gained an introductory level of knowledge in operations and supply chain management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify major competitive priorities of operations and their connection to business and operations strategies.
2. Critically evaluate the role and scope of operations management within a global business environment context.
3. Analyse the key features of operations and logistics management including strategic and tactical operations decisions.
4. Evaluate operational problems and propose sustainable solutions by applying qualitative and quantitative techniques and models.
5. Collaborate with group to manage and sustain operations to meet business challenges.

Subject Content

1. Operations management, its role and relevance to competitiveness and supply chain framework.
2. Business and operations strategy, core competencies, structural and infrastructural decisions and productivity management.
3. Demand management and new product and service design.
4. Process design and management and layout.
5. Quality management and control.
6. Inventory management and control.
7. Capacity and constraints management and scheduling.
8. Supply chain and logistics management.
9. Project management.
10. Lean systems.

Assessment

BUSM 3046 Managing Organisations and People

Credit Points 20

Legacy Code 200886

Coordinator Jayne Bye ([https://directory.westernsydney.edu.au/search/name/Jayne Bye/](https://directory.westernsydney.edu.au/search/name/Jayne%20Bye/))

Description This online unit will enable students to critically reflect on and analyse key management tasks including processes of people management. It also explores how context shapes management practice and the importance of understanding the management of organisational change. It takes a problem-based approach to management learning and combines academic understanding of management issues with opportunities to apply knowledge. Students will have the opportunity to identify problems in their own workplaces and use management concepts, tools and techniques learned in this unit to make recommendations to address the problem.

School Business

Discipline Business Management

Student Contribution Band HECS Band 4 20cp

Level Undergraduate Level 3 subject

Restrictions Students must be enrolled in 2773 Bachelor of Business Administration or any Western Sydney Undergraduate program where permission has been granted by that program's DAP or Academic program Advisor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the knowledge and skills required for management;
2. Identify and articulate workplace problems amenable to management intervention;
3. Identify a repertoire of concepts, tools and techniques for solving management problems in the workplace;
4. Apply the skills required for effective management problem-solving to the workplace and/or case study scenarios;
5. Apply Human Resource Management (HRM) concepts through problem-solving;
6. Apply change management concepts through problem-solving;
7. Demonstrate research skills and the ability to apply theory to workplace practice;
8. Use critical thinking and reflection to question personal assumptions and attitudes to management practices;
9. Demonstrate skills in online participation and collaboration to produce knowledge;
10. Write and produce management reports that can be understood by a diverse audience.

Subject Content

- key components of management
- communicating and managing communication
- Problem solving and decision making
- planning and control: making things happen
- managing information
- Understanding people at work
- The psychological Contract
- Understanding leadership within management
- Working in groups and teams

- Recruiting and selecting staff
- managing performance
- learning and development
- organisational culture
- The organisation and The external environment
- managing change

BUSM 3048 Negotiation, Bargaining and Advocacy

Credit Points 10

Legacy Code 200613

Coordinator Michael Lyons ([https://directory.westernsydney.edu.au/search/name/Michael Lyons/](https://directory.westernsydney.edu.au/search/name/Michael%20Lyons/))

Description In 'Negotiation, Bargaining and Advocacy' students identify and assess contrasting approaches to negotiation and identify the importance of strategy and judgement in negotiation. Students develop their skills through a team-based online negotiation and a critique of the experience of this negotiation. Through case studies, students examine conciliation, mediation and arbitration with a particular focus on advocacy practice in industrial tribunals. An important theme in the unit is the assessment of the contextual and regulatory factors that shape negotiation, bargaining and advocacy practice. This aspect draws on contemporary debates in these spheres most notably concerning the Australian context.

School Business

Discipline Industrial Relations

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1023

Equivalent Subjects LGYA 9847 - Negotiation Bargaining and Advocacy

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically assess models of negotiation and bargaining and utilise these models to analyse and reflect upon negotiation practice;
2. Demonstrate the practical skills necessary to participate in negotiation and bargaining;
3. Evaluate advocacy practice and the processes of third-party dispute intervention;
4. Assess how contemporary legislative, political and technological contexts affect the processes of negotiation, bargaining and advocacy;
5. Produce well written and argued material in response to assessment tasks set for the subject.

Subject Content

- Negotiation Overview
- Models of third party Dispute intervention
- Advocacy in third party Dispute intervention
- Advocacy in practice
- Distributive and Integrative Negotiation

- differentiation, exploring options and exchanging offers
- Constituency-based Negotiation
- Models of Negotiation and Bargaining
- power and ethics in Negotiation
- context of Negotiation ? Technology

BUSM 3054 People, Work and Society

Credit Points 10

Legacy Code 200860

Coordinator Jennifer Hall ([https://directory.westernsydney.edu.au/search/name/Jennifer Hall/](https://directory.westernsydney.edu.au/search/name/Jennifer%20Hall/))

Description 'People, Work and Society' draws on psychology and sociology to deepen participants' practical human resource management (HRM) expertise. Designed for those aiming at careers as HRM professionals, participants will use HRM knowledge to develop policy and procedure that takes account of the psychology of individuals and groups as well as rising expectations for socially-responsible management. The complexities and rewards around

managing diverse workforces receive particular attention. Through the challenge of real-world activities, participants are introduced to the difficult judgements that confront HRM professionals around people at work.

School Business

Discipline Human Resource Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1023

Equivalent Subjects BUSM 3075 - Workplace Behaviour LGYA 9849 - Workplace Behaviour

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the implications of individuals' psychology, social change and diverse workforces for effective HRM practice;
2. Explain the importance of managing diversity for developing an inclusive and competitive workplace, relative to the challenges of social change and conflict;
3. Formulate policy and procedures that demonstrate HRM's potential contribution to organisational social, economic and environmental sustainability;
4. Identify key aspects of work psychology and sociology in order to analyse the role of HR practitioners relative to the tensions between economic and socio-legal imperatives.

Subject Content

The business environment:

- industry and social change
- policy and regulation
- labour markets and skill

Managing diversity in organisations:

- corporate strategy and sustainability
- HR systems and networks
- HR Operations and communication

Managing individuals:

- work Psychology
- team dynamics and inclusivity
- managing difficult situations

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Portfolio	1,500 words	40	N	Group
Case Study	1,500 words	30	N	Individual
Reflection	1,500 words	30	N	Individual

Prescribed Texts

- There is no prescribed textbook for this subject. subject readings are available online via vUWS and are updated regularly to reflect developments in the literature.

BUSM 3058 Practice Management for Health Professionals

Credit Points 10

Legacy Code 400156

Coordinator Diana Messum ([https://directory.westernsydney.edu.au/search/name/Diana Messum/](https://directory.westernsydney.edu.au/search/name/Diana%20Messum/))

Description From 2017 students should take 401149 - Exercise Physiology Across the Lifespan. This unit is aimed to introduce the student to the management issues in establishing and working in a clinical practice. While the unit will cover issues related to health professionals and public sector management, the focus of the unit will be on issues in private practice. The aim of the unit is to introduce the student to a wide range of topics, including an over view of health care funding in Australia, private and public health system, developing a business plan, different business structures, financial management, managing staff and occupational health and safety issues.

School Health Sciences

Discipline Business Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Compare and contrast the global components of the health care system within Australia, with particular emphasis on funding arrangements for private and public sector funding.
2. Identify the key elements of a successful business plan, extrapolating these into a small business in a health care profession.
3. Outline the essential elements in establishing a small business, including business viability and raising capital.
4. Discuss the key issues in financial planning of a small business, with particular emphasis on taxation, insurance and related issues.
5. Manage a budget, with consideration to the income and types of expenditure required.
6. Delineate different business structures and employment arrangements, including partnerships, associates and affiliates.
7. Discuss the issues associated with the employment of staff, including employer and employee obligations.
8. Explore concepts and roles of leadership and management styles.
9. Identify the occupational health and safety issues within a small business and formulate ways in which a practice can be managed according to these guidelines.

Subject Content

1. Overview of the Australian health care system
 - private Vs public sectors
 - funding Models for health care in Australia
 - Medicare
 - health Insurance
2. Setting up a small business
 - Raising capital
 - developing A business plan
 - developing A Marketing plan
 - Risk analysis
 - financial analysis
3. Financial Planning and Evaluation
 - managing budgets
 - capital Expenditure
 - Recurrent expenses
 - taxation and related Issues
 - investment and finance
 - funding, Loans and financial resources
 - investment and capital growth programs
4. Business Structures
 - company, Trusts etc.
 - registering A company
5. Types of employee contracts
 - rights and obligations of employers and employees
 - Workcover and compensation
 - Insurance Issues
 - employee Vs affiliate Vs partner
6. Managing Staff
 - management and competencies
 - management styles and leadership
 - employee relations
 - staff Recruitment and selection
 - staff retention
 - performance management
7. Occupational Health and Safety Issues

Teaching Periods

BUSM 3059 Processes and Evaluation in Employment Relations

Credit Points 10

Legacy Code 200575

Coordinator Louise Ingersoll ([https://directory.westernsydney.edu.au/search/name/Louise Ingersoll/](https://directory.westernsydney.edu.au/search/name/Louise%20Ingersoll/))

Description This unit applies theory and skills developed throughout the discipline in Human Resource Management to real-world organisational and policy challenges and opportunities. Students will develop and use employment relations concepts and "metrics" to design implementation plans and to evaluate policies, practices and change initiatives. Students' skills in communication and problem solving will be assured in this unit.

School Business

Discipline Human Resource Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1023

Equivalent Subjects LGYA 4642 - Human Resources Development Seminar

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse theoretical foundations of employment relations;
2. Apply theoretical foundations of employment relations to practice;
3. Design and implement a number of quantitative and qualitative measures of employment relations performance to a range of organisations and policies;
4. Design, implement and evaluate a Human Resources strategy for a client scenario;
5. Create a portfolio to reflect achievement in the subject.

Subject Content

- peer employment relations strategy ? engaged learning and The HR advantage
- The role of culture and values
- Intended HR practices and organisational performance
- The role of line managers and employee perceptions
- HR architecture and employment sub-systems
- professional business communication
- HR consulting and decision making

BUSM 3062 Quality Management

Credit Points 10

Legacy Code 200167

Coordinator Denise Jarratt ([https://directory.westernsydney.edu.au/search/name/Denise Jarratt/](https://directory.westernsydney.edu.au/search/name/Denise%20Jarratt/))

Description The principles taught in Quality Management underpin the successful management of all business enterprises. Students enrolled in this unit will be introduced to the latest concepts in performance excellence, with a strong emphasis on service quality. Various tools and techniques that support performance excellence are presented, including ISO9000, Six Sigma, and high-performance human resource practices. Contemporary areas covered in this unit involve identifying customers' needs, and involvement in organisational performance which is supported by continuous improvement and organisational learning.

School Business

Discipline Quality Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Differentiate the distinguishing characteristics of the total quality management paradigm and understand how this area of management evolved as a competitive solution in today's global market place

2. Define quality in terms of a range of applicable parameters as related to manufacturing and service environment

Subject Content

Differing Perspectives on Quality
Global Supply Chain and International Quality Standards
Strategic Quality Planning
Quality and Innovation in Product and Process Design
Designing Quality Services
Managing Supplier Quality in the Supply Chain
Quality tools (including Six Sigma)
Implementing and Validating Quality Systems

Teaching Periods

BUSM 3063 Reward and Performance Management

Credit Points 10

Legacy Code 200739

Coordinator Jennifer Hall ([https://directory.westernsydney.edu.au/search/name/Jennifer Hall/](https://directory.westernsydney.edu.au/search/name/Jennifer%20Hall/))

Description 'Reward and Performance Management' introduces students to critical perspectives in reward management. Through case studies students consider the wider context in which reward strategies are devised and the strategic decisions that arise if reward is to meet regulatory requirements, organisation objectives and the expectations of the workforce. Students examine the component parts of contemporary reward and critically assess the relationship between performance and reward. Through engagement with different types of performance management systems, students identify and assess contrasting approaches to performance management.

School Business

Discipline Human Resource Management

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1023

Incompatible Subjects BUSM 3040 - Management of Employee Performance LGYA 4822 - Remuneration Theory and Practice

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Accurately use the language of reward and performance management in verbal and written argument.
2. Critically assess reward and performance management principles and practices in terms of the competing interests of employers and employer associations, employees and trade unions, and governments and tribunals.
3. Critically assess contrasting approaches to reward.
4. Identify contrasting approaches to the management of organisational and employee performance.
5. Critically assess models of performance management and the processes through which organisations and systems develop, enhance and reward employee performance.

Subject Content

1. Models of reward and the labour market.

2. Differing approaches to equity and the grounds for regulatory intervention.
3. The shape of reward in Australia.
4. Contemporary developments in approaches to reward.
5. Choice and flexibility in reward management design.
6. Performance management as a system to align employee performance with organisational objectives.
7. Models of performance management as systems to develop, enhance and reward employee performance.
8. The management and appraisal of employee performance.
9. Challenges in performance management.
10. Economic, social and environmental sustainability and reward and performance management.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Item	Length	Percent	Threshold	Individual/ Group Task
Case Study	1,000 words	20	N	Individual
Portfolio	1000 words	20	N	Individual
Debate	Students must nominate to participate in 6 out of 10 debates.	20	N	Individual
Final Exam	2 hours	40	Y	Individual

BUSM 3064 Service Industry Analytics

Credit Points 10

Legacy Code 200991

Coordinator Karina Wardle ([https://directory.westernsydney.edu.au/search/name/Karina Wardle/](https://directory.westernsydney.edu.au/search/name/Karina%20Wardle/))

Description Service Industry Analytics is designed to provide a working knowledge of how to analyse and report information required in planning and operating a services business. It explores the methods, uses and limitations of contemporary research in the sport and hospitality industries. Students will gain experience with the planning and implementation of research and assessment of service research problems, utilising the collection and analysis of both quantitative and qualitative data.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects BUSM 2036 - Service Industry Studies
 LGYA 4814 - Sport Management Research Methods
 LGYA 4799 - Hospitality Business Research Methods
 LGYA 4863 - Services Research Methods
 MKTG 2011 - Customer Insights

Restrictions Only students enrolled in the MT2035 Hospitality Management or MT2036 Sport Management can enrol in this subject.

Assumed Knowledge

Basic knowledge of the service and experience economies is assumed.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the scope and function of services research;
2. Evaluate the different types of information to decision making within the sport and hospitality industries;
3. Identify and apply the key stages involved in conducting a services research project;
4. Apply data analysis techniques in services management research;
5. Demonstrate ability to present, write, implement and evaluate proposals and report results.

Subject Content

- research methodologies and Sampling techniques used in service industries
- planning and designing Projects across sport and hospitality industries
- primary and secondary data sources
- Qualitative research collection and analysis methods within A service context
- quantitative research collection and analysis methods within A service context
- publishing and disseminating research results

Assessment

BUSM 3065 Special Event Management

Credit Points 10

Legacy Code 200990

Coordinator Karina Wardle ([https://directory.westernsydney.edu.au/search/name/Karina Wardle/](https://directory.westernsydney.edu.au/search/name/Karina%20Wardle/))

Description Special Event Management is designed to introduce students to event management in order to develop their skills and knowledge relating to the organisation of various event forms. The unit provides students the opportunity to practically apply management strategies, leadership theories, communication skills, and administration skills to facilitate the design, marketing, communication, innovation and planning of their own event. Careers in the industry can be found across diverse fields in the public and private sectors including hotels, event management companies, exhibition and sports venues, and in community organisations such as clubs, schools and charities.

School Business

Discipline Business and Management, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects BUSM 3067 - Sport and Hospitality Event Management

Incompatible Subjects LGYA 4810 - Sport Event and Facility Management
 LGYA 4864 - Convention and Special Event Management

Assumed Knowledge

This is an advanced subject which assumes intermediate knowledge of sport/hospitality management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate event industry trends and practices;
2. Work collaboratively and effectively as part of an event coordination team to plan, organise, implement and review an event;
3. Produce a project timeline, run sheet(s) and budget for an event;
4. Identify revenue sources and evaluate the role of sponsors;
5. Recognise the importance of identifying and engaging with key internal and external stakeholders;
6. Apprise the management and leadership skills required to organise and participate in team activities/work areas.

Subject Content

- event types and potential participants
- event conceptualisation and strategic planning
- identifying and communicating with stakeholders
- development of Project management skills including timeline and budget
- The Importance of site selection and influencing Factors such as logistical Operations, legal and Risk management
