

BEHV 7010 CLINICAL PSYCHOPATHOLOGY 1

Credit Points 10

Legacy Code 101812

Coordinator Craig Gonsalvez ([https://directory.westernsydney.edu.au/search/name/Craig Gonsalvez/](https://directory.westernsydney.edu.au/search/name/Craig%20Gonsalvez/))

Description This subject provides a comprehensive examination of the nature, context and assessment of adult psychopathology. Students will review and critically evaluate the origins and structure of current diagnostic systems, and examine the diagnostic criteria for a range of major psychopathological syndromes and the range of contexts within which they may arise. Skills in balancing the assessment of adult disorders with counselling and engagement through a clinical diagnostic interview will be acquired. Beginning level skills in the formation of adult disorders will also be acquired.

Restrictions

Students must be enrolled in 1546 Master of Psychology (Clinical Psychology) or 1812 Master of Clinical Psychology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss the history and characteristics of the DSM and ICD and critically evaluate their strengths and limitations as classificatory systems of adult psychopathology.
2. Outline the diagnostic features and associated characteristics of the major DSM-5 psychological disorders (anxiety, mood, trauma and obsessive-compulsive and related disorders).
3. Describe the current major theories of the aetiologies of these disorders, identify risk and resilience factors and understand the diverse contexts within which such difficulties may arise.
4. Demonstrate competence in the assessment of adult psychopathology and making relevant and adequate diagnoses, case formulations and management plans for common psychological disorders. Conduct the clinical diagnostic interview in an interpersonally and culturally sensitive manner.

Subject Content

Theoretical and empirical foundations of psychopathology.
 Clinical assessment of psychopathology.
 Current classification systems (DSM-5 and contrasted to ICD 10, where relevant)
 Anxiety disorders.
 Mood disorders (including depressive and bipolar disorders).
 Trauma and stressor-related disorders.
 Obsessive-compulsive and related disorders.

DSM as a construction of disorder and relational problems that may be a focus of clinical attention.
