BIOS 1033 CONCEPTS IN HUMAN PHYSIOLOGY

Legacy Code 301254

Coordinator Sabine Piller (https://directory.westernsydney.edu.au/ search/name/Sabine Piller/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/ currentstudents/current_students/fees/) page.

Learning Outcomes

On successful completion of this subject, students should be able to:

- 1. Describe the component parts of a cell and how cell interactions occur
- 2. Recognise that all physiological systems are interdependent
- 3. Define the concept of homeostasis and explain how different mechanisms regulate its function
- 4. Explain physical, chemical and electrical principles of cell communication
- 5. Recognise structure and function relationships
- 6. Collect and interpret data from practical classes investigating physiological principles

Subject Content

1.Cell function, membranes, communication and their interdependence 2.Information flow: a. Physical principals of physiology: pressure driven (flow, viscosity and resistance) and electrically driven (force, potential, and currents) b. Chemical principles of physiology: energy, intermolecular forces, gradients and kinetics 3.Homeostasis

4.Interpretation of physiological data

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Туре	Length	Percent	Threshold	Individual/ Mandatory Group Task
5 x tutorial worksheets	30 minutes seach	40	Ν	Individual
3 x Practical Quizzes	15 minutes each	30	Ν	Individual
Multiple choice and/or short answer quizzes x2	30 minutes each	30	Y	Individual
