

BLDG 1016 BUILDING SCIENCE (WSTC)

Credit Points 10

Legacy Code 700308

Coordinator Robert Paluzzano ([https://directory.westernsydney.edu.au/search/name/Robert Paluzzano/](https://directory.westernsydney.edu.au/search/name/Robert%20Paluzzano/))

Description This subject provides students with an introductory overview of the way in which scientific principles impact on the structure, fabric and performance of the built environment. Areas covered will include the concepts of force, energy and work in building structures; properties of common building materials; and significant aspects of heat, light and sound in buildings. All the theoretical content will be contextualised within examples drawn from the construction industry. Students will be able to recognise the critical data required for practical decision-making in the area of building technology.

School Eng, Design & Built Env

Discipline Building Science and Technology

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects BLDG 1013 - Building Science

Restrictions

Students must be enrolled at The College. Students in Extended Diploma programs must pass 30 CPs of preparatory subjects in order to enrol in this subject. Students in Integrated Diploma programs must pass or be enrolled in the preparatory subjects in order to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the ways that forces act on building structures
2. Compare and contrast the properties of common building materials
3. Explain the causes of deterioration in building materials over time and suggest remedies for this deterioration
4. Distinguish the concepts of embodied energy and embodied carbon as they relate to buildings
5. Correlate the concepts of heat, light and sound transmission through building elements with decision making on materials for buildings

Subject Content

Introduction to scientific concepts as they impact on buildings
 Energy, mass, force, velocity and acceleration in building structures
 Properties of timber, steel, concrete and other common building materials
 Durability and deterioration in building materials
 Embodied energy and embodied carbon in building materials and systems
 Management and control of heat, light and sound in buildings
 Introduction to scientific concepts as they impact on buildings
 Energy, mass, force, velocity and acceleration in building structures

Properties of timber, steel, concrete and other common building materials
 Durability and deterioration in building materials
 Embodied energy and embodied carbon in building materials and systems
 Management and control of heat, light and sound in buildings

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task	Mandatory
Quiz	30 minutes	10	N	Individual	N
Case Study	2,500 words	20	N	Group	N
Quiz	60 minutes	30	N	Individual	N
Reflection	1,500 words	40	N	Individual	N

Teaching Periods

Term 2 (2024)

Penrith (Kingswood)

On-site
