Coordinator Abbas Ranjbar ([https://directory.westernsydney.edu.au/search/name/Abbas Ranjbar/](https://directory.westernsydney.edu.au/search/name/Abbas%20Ranjbar/))

Description Engineering Computing is an introduction to using computation to solve real problems. The subject also aims to instil sound principles of program design that can be utilized in many subjects throughout the students' course. The basic elements and structures of a high level language are taught. Students are exposed to numerous engineering problems and are encouraged to implement solutions using an algorithmic approach.

Basic knowledge in use of computers and Windows operating system.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Utilise a typical software development environment
2. Develop solutions to problems using an algorithmic approach
3. Apply data structures of a common programming language, to translate an algorithm into a coded program. These programming structures should be included as a minimum: Selection and repetition statements, Functions, 1 & 2 dimensional arrays, File processing
4. Implement basic features of data manipulation and graphing using a spreadsheet program such as EXCEL

Subject Content

1. Spreadsheet applications - Spreadsheet operations
 2. Spreadsheet applications - Spreadsheet functions and macros
 3. Spreadsheet applications - Solving engineering problems using spreadsheets
 4. Structured programming - Introduction to programming environment
 5. Structured programming - Decision structures
 6. Structured programming - Repetition structures
 7. Structured programming - Modular programming
 8. Structured programming - Exchanging data with external files
- Problem solving & algorithm development will be embedded in each section.
