Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the basic principles of analysing an electric circuit
2. Apply Kirchhoff's Voltage and Current laws and demonstrate their use in a number of electric circuit configurations
3. Apply nodal analysis, mesh analysis and linear circuit theorems to electric circuits.
4. Apply the Laplace Transform to electric circuits
5. Draw conclusions from frequency responses.
6. Mathematically analyse frequency-selective filters.
7. Describe and utilise magnetically coupled circuits
8. Describe and utilise two-port networks.
