## Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use graphical and computer methods to analyse data and draw conclusions
2. Identify and calculate the characteristics of uniformly accelerated motion and predict variables of motion based on past or current conditions including projectile motion
3. Use Newtonian dynamics to quantitatively analyse objects in equilibrium in two dimensions
4. Use the concepts of work and conservation of energy to quantitatively solve complex problems
5. Use Newtonian dynamics to quantitatively analyse objects experiencing circular motion
6. Demonstrate an ability to describe and apply quantitative relationship between charge, current, resistance, voltage and electrical power in the complex combined circuits
7. Analyse quantitatively the properties of waves
8. Perform experiments to demonstrate and measure physics principles and concepts
