# PHYS 1004 PHYSICS 1 (WSTC)

**Credit Points 10** 

Legacy Code 700035

Coordinator Phillip Newman (https://directory.westernsydney.edu.au/search/name/Phillip Newman/)

Description This subject provides an introduction to physics for science and medical science students as well as providing a basis for further study of more advanced physics for students pursuing courses in nanotechnology, chemical, physical and mathematical sciences. It provides a foundation to understand the physical principles which underlay scientific instrumentation and analysis. Topics covered include systems of units; Introductory mechanics, Newton's laws, work, conservation of energy and momentum; Electricity, electrostatics, DC and AC circuits and components, introductory electromagnetism; Waves and optics, electromagnetic radiation, reflection, refraction, image formation, polarisation, interference and diffraction.

Level Undergraduate Level 1 subject

**Equivalent Subjects** LGYA 3630 - Engineering Physics PHYS 1001 - Physics 1 LGYA 5727 - Physics 1D PHYS 1003 - Physics 1 PHYS 1002 - Physics 1

Restrictions Students must be enrolled at Western Sydney University, The College. Students enrolled in the Extended Diploma programs (7086 - Diploma in Science Extended, 7087 - Bachelor of Science Extended (WSTC First Year Program) must have passed 40 credit points in order to enrol in this subject. Students enrolled in the combined Diploma/Bachelor programs listed below must pass all College Preparatory subjects listed in the program structure before progressing to the Year Two subjects.

#### **Assumed Knowledge**

HSC Mathematics or equivalent.

## **Learning Outcomes**

On successful completion of this subject, students should be able to:

- Analyse the description of a physical problem, for the topics listed in the contents, and apply a frame of reference or other appropriate mathematical framework to the problem.
- Explain the physical principles by writing down appropriate equations or other mathematical models such as a geometrical construct to produce a mathematical model of the physical problem.
- Identify known and unknown variables in a mathematical model of a physical problem and manipulate the model to predict unknown.
- Interpret results of calculations in terms of real physical world events.
- 5. Record, present and analyse experimental data.
- 6. Estimate the errors in a measurement and propagate the effects of these errors through simple calculations.

## **Subject Content**

- 1. Introduction to Physics: units and measurement.
- 2. Mechanics: Kinematics in one and two dimensions, velocity, acceleration, vectors; Dynamics, force, mass and Newton?fs laws; Work, energy, power and the conservation of energy; Linear momentum and the conservation of momentum.
- 3. Flec

#### Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Туре	Length	Percent	Threshold	Individual/ Group Task
Log/ Workbook	400 words each	20	N	Individual
Quizzes x 4	30 minutes each	40	N	Individual
Intra-session Exam (Data Analysis Lab Test)	80 minutes	10	N	Individual
Final Examination	2 hours	30	N	Individual
